Sorry Mark. I don't speak Spanish and I don't hear a lot to go on. I suspect this *is* Radio Bethel but I don't hear an ID as such. I hear religious references such as "evangelio" at 1:21. If the offset matches up too then I think it is probably 100% Radio Bethel. You will need somebody who understands Spanish to be certain.

At the same time here this morning I hear a weak Spanish YL around the top of 0600 but she's buried in splatter.

Radio Bethel 1570 was heard in SW Scotland at the same time Mark.

I also just noticed what I presume to be WOIR Homestead FL on 1430 at 0600. It's very weak here but maybe you'll hear it better.

The lady shouts it very quickly between the FM fq and slogan. Stress very clearly on second syllable the first letter is pronounced between b and v as always.
And to make it clearer just switch off NR :-)

Current offset it .000
> The clip was taken from the 06:00utc clip just in case anyone wants to
> check their own recordings

At that time it was already gone here

Check 1290, there's an interesting SS tx next to Puerto Cabello there, which is apparently off after 0400z.
Hopefully you have a better audio than me?

--
Today I got good audio of 1590 BBN

http://dx.3sdesign.de/unid/Spectr-130320-0530-1290.jpg

the mentioned phone number matches the one here

1520 0526 PTR WVOZ Radio Voz, San Juan PR. Full ID routine, frequency, etc. at 0526:49. Lively Latin music. Another ID jingle at 0535:44. Fair peaks despite flag heading of 345 degrees. 6827 km

A few bits and pieces around at 0500 and 0600. This is all I could ID.

Good DX!

Hi All,
Just thought I would check in,being that it's all quiet at the moment. I have just managed to catch up on a shed load of listening (Kids and wife have been ill).
I managed to bag loads on the 17th,but since then it's been a pretty poor affair.

Ok, can anyone help out with this ID on 1120Khz from the 17th, at 04.59UTC, they also carry CBS News, I just can't seem to get my ears around this, old age IOI

1120Khz Unid
<https://dl.dropbox.com/u/91837451/1120Khz%20Unid%2017march%2004.59%20ut\
c.mp3>

Lets hope we have a good return to better signals for the end of the season

Hi all Just been going over some recordings from the 23rd at 05:50utc
and managed a good signal from YVRZ Radio 2000 (Radio Dos Mil) 1500khz
Venezuela.
This being received on my Super KAZ that beams 320 deg don't know if
that's good or bad, the front lope must be pretty wide.

Nice signal Mark! It reminds me of the sort of signals I used to hear on the 60m broadcast band back in the late 70s/early 80s.

You can also hear a heterodyne hum which is probably the off-frequency Peruvian Radio Santa Rosa in Lima.

I know nothing about KAZ antenna, but I know the flag antenna has a very wide front lobe. Pointing mine at 345 degrees I heard the Peruvian Turbomix recently which is on approximately 1540.5. I haven't logged this yet as I am still trying to hear a clear ID.

I remember seeing a 3D computer plot of the flag antenna a few years ago and it showed just why they are so good - that they also have a very wide rear null. Maybe somebody knows the location of this plot.

John

Thanks John, you are correct about the het as I did get an I'd from Santa Rosa
It appears the kaz also has a wide lope like the flag I think that's an advantage as long as the back null is set correctly.
Cheers mark

Damien,

I can't make enough out to get something either. About the middle of the clip I hear a male voice that yells out something "WH...." Could also be "WK..." or something entirely different. I think you definitely have a ID in there but I cannot hear it enough to guess at a correct station.

In my head it sounds like the announcer is saying "WHGE....3009" which makes no sense at all. Was there music or just news? That would certainly narrow it down.

Cheers,

John

Hi John,
Thanks for listening, It's sounds like a WH to myself, the signal wasn't there for too long, so I only caught it around news time, I can comfirm them mentioning "CBS News", apart from that,thats all I have.

Looks like we have more storms pending,still it's worth trying tonight.You never know what can turn up.

Hi fellow DXers!
I am located in Duluth, Minnesota USA.
If you'd like, you can stop by my new facebook page.
I have included links to all of my DX audio clips pages.
They were on fortunecity and geocities, but are now defunct except for archives. The archived pages still have most of the audio clips.
I am revamping another FM DX clip page as well.
Hope you all enjoy and follow me on facebook.

After looking through your archives on FortuneCity I noticed you had a link to my old DX clip site on cthome.net. Of course that domain hasn't existed for years. All of my MW DX clips are at http://fmdx.usclargo.com/hearditonam/. If you intend to post FM DX clips, please don't do it here. This list is only for AM Dxing.

From: BEAVAN SIMON
Topic: 3770 Message: 3770

All,

I'm weeks behind in checking my overnight Medium Wave recordings and came across the signal in the link on 1680khz back on 13th March at 01:00.

I've only heard WOKB and WTTM on 1680 and if this is and ID, it doesn't sound like either of those.

The first recordning is with NR , the second without. Any ideas ?

https://www.box.com/s/d2b7k4wqm7iq6axm8mef

https://www.box.com/s/yfbxjihp46yk6gmtnjem

Thanks

Simon

First recording:

"All news radio station ... KRJO Monroe .... "

Second recording, same but weaker.

They carry Bloomberg News.

So 100% KRJO Monroe LA.

A bit late on your UNID 1120. It'a unusual to hear anything other than
KMOX St Louis MO on that frequency from North America. KMOX don't always
seems to ID bang on the our. Not much use but I suspect you had KMOX there.

Cheers

John

Thanks John.

Listening to it now it is blatently obvious, but I listened to it over and couldn't hear it. To add to my stupidity, I was ignoring KRJO because I was reading LA as..... D'oh - Never mind !

The flag has now been moved to its summer residence, at the bottom of the garden, pointing west. This is to take advantage of possible Latin American activity during the summer months. The background noise levels have decreased as the flag is further away from the property but, personally, I still like to make use of noise reduction on Perseus as it makes vocals easier to hear, at least to me.

I just started using HDSDR for playback of my medium wave files. Although I don't feel HDSDR is quite so versatile for medium wave DX as Perseus, it has some useful features. The main advantage for me is the cleaner audio quality - a big improvement over Perseus. The noise reduction on HDSDR is also much cleaner.

How long I remain listening to medium wave over the next few weeks depends on one thing. I will shortly be re-instating the DTV300 USB stick for band 2 FM DXing. Last time I used this there was a conflict with Perseus, which stopped working. If this happens again then medium wave will be abandoned in favour of band 2, though I don't know how much success I will have using the DTV300 as a band 2 SDR recorder as this is new territory for me.

Good DX!

3774. Help with possible ID on 970khz

Yahoo group: skywavesmw
Date: 2013-04-11 07:43:20 UTC
From: BEAVAN SIMON
Topic: 3774 Message: 3774

Sorry to keep doing this, but I'm having great difficulty with accents on noisy signals !

Anybody be able to help me with this on 970khz from 04:00 on 17th March. ?

https://www.box.com/s/c9pby2k8gvh591585jf3

It probably needs headphones to hear anything.

Thanks

Simon

3775. Portugal: mediumwave transmitters for Rádio Sim tem porarily switched off - 927 kHz Évora, 1251 kHz Valongo & 1 251 kHz Viseu

Yahoo group: skywavesmw
Date: 2013-04-11 19:19:28 UTC
From: Luís Carvalho
Topic: 3775 Message: 3775

Hello all,

Inside information from a person working at r/com group (Rádio Renascença's group, also owner of Rádio Sim), who post the original message (in Portuguese) at http://groups.yahoo.com/group/mundo_da_radio/message/843 : the administration gave the order to switch off temporarily some MW transmitters in Portugal mainland. Therefore, the transmitters at Évora (927 kHz 1 kW), Valongo (1251 kHz 10 kW) & Viseu (1251 kHz 10 kW) has been inactive since last week. r/com is still evaluating the situation of 963 kHz Seixal, which could be the next one.

The decision of the nationwide commercial religious (Catholic) broadcaster is a consequence of the economic crisis in Portugal, which led to serious cuts in advertising revenues, forcing media (including radio stations) to cost reduction. The affected txs were chosen because they are located in regions already served by VHF-FM transmitters: 97.5 kHz Portel (near Évora), 100.8 MHz Maia (tx in Valongo - near Oporto), 106.4 Viseu & 102.2 MHz Palmela (near Setúbal, covering also Lisbon). The remaining transmitters should work as usual. Meanwhile, Muge 594 kHz uses the space transmitter running at 1 kW in order to save on the electricity bill.

The station did not decided yet when should the transmitters be reactivated; viability studies will take in account the evolution of DRM (Digital Radio Mondiale) in Europe - to see if it is worth keeping active MW licences. I hope RR's definition for "temporary"/"provisional" is not synonymous with "permanent"...

Best regards & 73s,
Luís Carvalho

Update: I forgot to include 576 kHz Vila Verde (close to Braga - 10 kW), which was swiched off too because Rádio Sim has a VHF-FM tx in Braga (101.1 MHz). Therefore (just to confirm), the inactive txs are: 576 Braga, 927 Évora, 1251 kHz Valongo & Viseu. Sorry, Ydun Ritz (& others who could have quote my message).

That's great Damien. Nice ID!

It's good to see some of you are getting good North American reception
at this time of year.

I decided to pull the plug on MW DXing until the autumn, taking my flag
antenna down two days ago. It used to point north but I moved it to the
west a couple of weeks ago in the hope of improving Latin American
reception but it was not to be. West has proved to be a poor direction
here. I still need those northerly winter conditions so I can take
advantage of the sea path. I am not hearing the same Latin DX others
have been reporting recently. Nothing like it in fact. I am also plagued
by a very noisy band with increased European QRM since pointing west.

Good DX!

3785. 1521 Saudi Arabia on two portables + using sync lock to reduce interference

Yahoo group: skywavesmw
Date: 2013-05-01 17:57:55 UTC
From: pe1etr
Topic: 3785 Message: 3785

Hello all,
Here are a couple of recent videos that may be of interest to some of you.

Tecsun PL-606 & Sony ICF-SW7600GR on MW (Saudi 1521)
http://youtu.be/LSP1tMD1ylI

Using the sync lock to reduce interference on LW.
The station on 177kHz suffers adjacent QRM from stronger and nearer 183kHz, when in normal AM mode. Using sync lock in LSB mode (furthest sideband away from 183) gives almost splatter free reception of 177.

Hi Simon.

It's WUNR. The letters are spoken first, then I can only guess that the next bit is a very rushed "Radio International", their slogan. You will hear Boston mentioned shortly after.

Nice signal for the time of year!

John

3791. Re: [skywavesmw] ID for staion on 1600khz

Yahoo group: skywavesmw
Date: 2013-05-23 10:38:24 UTC
From: John Faulkner, Skegness
Topic: 3788 Message: 3791

Well, to whet your appetite for the next season, here's a list of what's been reported on 1600 to date, from most regular to rarest:

WUNR Brookline MA
WKWF Key West FL
WLAA Winter Garden FL
WAAM Ann Arbor MI
WWRL New York City NY
WHNP East Longmeadow MA
KGYM Cedar Rapids IA
KGST Fresno CA
WHTY Riviera Beach FL
WRPN Ripon WI
KEPN Lakewood CO
KPNP Watertown MN
WZNZ Atlantic Beach FL
KLEB Golden Meadows LA
WMQM Memphis TN
KVRI Blaine WA
WKKX Wheeling WV
KRVA Cockrell Hill TX
KUBA Yuba City CA
KDAK Carrington ND

A good many of the above are north-of-Scotland loggings, where they have a fair advantage over us more southerly mortals :O) I have had at least seven of these stations, but some were heard from my old Ashfield address.

One of the more unusual ones and easy to distinguish of the above is KPNP which is a mid-winter station. It is immediately recognisable by its Hmong programming. A style from the mountainous regions of China, Laos, Vietnam, and Thailand (so Wikipedia just informed me).

Cheers

John

Thanks for the 1600 khz list John. I'll keep an ear out next year.

Unfortunately something in the neighbourhood is putting out massive interference spikes every 65khz from MW to high up into short wave since about 2 weeks ago, so I'm a bit down about that at the moment.

I've tried tracking it down using a portable and think I've an idea of the house it is coming from and it is up for sale, so hopefully they will get a sale in the summer and take their dirty appliance with them.

Simon

From: John Faulkner, Skegness
Topic: 3788 Message: 3793

Sounds like it could be a switched mode power supply. I have the same problem with one which wipes out weak signals from 50 MHz to 108 MHz. I had OFCOM out the other day and they said there was nothing they could do as the problem was not severe enough.

I have a total wipe-out of the MW with S9+10dB of noise but I use three inline home made chokes which clear up the majority of the problem. I use the light blue circular ferrite rings, they're about an inch and a quarter in diameter and about 15 turns of RG174 coax around them. One of them inline brings the noise down considerably, the other two remove a little more, leaving the band quite "DXable". Maybe this could work for you?

Noise is a part of DXing these days. There seems to be little we can do about it, despite the best efforts of bodies like the RSGB.

3794. WARV drifting ?

Yahoo group: skywavesmw
Date: 2013-06-15 21:12:06 UTC
From: simbeav
Topic: 3794 Message: 3794

Is there anybody monitoring MW at this time of the year ?

I've been playing about with Stationlist (a great bit of software when you have the time to get used to it, by the way) and using it to record medium wave at 03:00 for the past few nights.
Reception to NA hasn't been bad and on 14th I spotted a strong signal on 1590.8khz, but no talk during my recording period.
This morning the same signal was on 1590.5khz and it was clearly from the US - No ID, but there was an OM talking about Monsanto and I see that WARV has a programme by Tom Cantor who claims to be a a CEO of a biotech company and a whistleblower, so it could well have been him.

Is it usual for US stations and WARV in particular to drift so wildly ? Or am I way off the mark here ?

Simon

I don't know, to avoid DX ovberkill I don't MW-DX now.

But check other channels to see if they are on their expected offset, like 1130
Don't check 1510 and 1520 they may vary a bit

Hi Simon.

I wouldn't be surprised if your 1590 is a South American.

I had planned to continue MW DXing through the summer with a westerly flag but reception was hopeless on it so I pulled it down. Just as well really as the sporadic E season has been excellent on band 2 FM.

I hope to be back on MW come August.

Good DX!

John

3800. Two Kaz Antennas

Yahoo group: skywavesmw
Date: 2013-06-29 17:02:55 UTC
From: scottishdxer_markborthwick
Topic: 3800 Message: 3800

Hi everyone I wonder if anyone can help ? I currently have a super kaz antenna beaming 320deg, I want to know if it is worth my time erecting another super kaz same size and direction but separated by about 120ft and some how connecting the two in the hope to increase signal strength and give me even more antenna gain. I don't want to use a phaser or anything like that,the two Kaz's must be connected in such a way as to still allow me to do perseus over night recordings without and adjustments. Does anyone know if this would work or is worth the effort? Any ideas or thoughts would be great. Cheers Mark (ScottishDxer) Perseus SDR and Icom IC-R7525x95ft Super Kaz beaming 320 deg25x95ft Super Kaz Beaming 028 deghttp://scottish-dxing.yolasite.com/ <http://scottish-dxing.yolasite.com/>

Hi All
Some good conditions on MW this morning here in Southern Scotland, allot of SS stations especially from about 1100khz up and into the X band, it was hard to get IDs as there were several carriers on some of the channels.
02:00 to 03:00utc was by far the best peak on my recordings, antenna used was my Super Kaz at 320deg.
Radio Rubi 1670khz from Argentina is a new one for me, and good IDs on the 02:00utc clip Radio Rubi Video <http://youtu.be/YiZsSI2kZ3s>

From: Kugellager
Topic: 270 Message: 3807

Hi all,

I have an UNID from a little DXing I managed to do while on holiday in Michigan a couple of weeks ago.

I have uploaded a recording in the files section of this group under "Kugellager's Google Earth Files"

Please listen to the song coming in under WTIC and tell me if you can ID the language.

I think the language might be Polish and therefore this UNID station would be WNWI from the Chicago area. I am hoping someone here can ID the language.

Any help is appreciated.

Cheers,

John

A Very interesting right up Mark, I would love to have that much space, however I only have the bog standard garden.

I tend to null the Europeans using a Flag roughly sized 10 metres by 3 metres with a Wellbrook and a variable resistor. I also use a Wellbrook ALA100 which acts like a loop. I then run both antennas into a Quantum Phaser, once you sort your rough nulling points, I can greatly reduce the Europeans, of course it can be a bit hit and miss on certain frequencies, but it works well enough for overnight recordings. I'm pretty sure having both Wellbrooks helps,as they are pretty broadband in terms of gain, so they are not so peaky over the frequency.

It's great to see your still trying to improve things, i guess the only way you know if you can tweak things further, Is to go mobile, and play with the antennas in a open field!

Hi Damien
Thanks its been a constant effort to try and improve my antennas since I started MW dxing about 2009 also I have tried several receivers.
As you say being in the countryside does have advantages but I still don't have room for a beverage so I try and find the next best thing.
It does help having less QRN and I know full well what its like to DX in Urban areas it has its own set of challenges.
It sounds like you have a great set up of your own and I have seen other Dxers have allot of success with Flag antennas, im interested in knowing what you make of the quantum phaser is it better than the MFJ variety ?

cheers and good Dxing

Hi Mark,
To be honest, I nearly purchased a MFJ , but after a bit of research, I went with the Quantum, firstly it's covers all the MW band up to 2000Khz. The MJF dosen't cover MW, so you have to get the soldering iron out and mod it, which voids guarantee. The build quality on the MFJ is not the best, I'm not saying it's rubbish, but the Quantum parts are harder wearing, and the design has been refined over the years, it's not over complicated, and simply just works.The Quantum is a hand made product, so it means you can email the owner direct. Of course if you are using a Phaser to reduce QRM, the MFJ may be the better option.

I first started with the Wellbrook Loop ALA100M, which are great, but in my view, better as a SW antenna, with this set up, I struggled with MW US Stations. Then came the Wellbrook Flag, a major improvement, due to the null and reducing Europe. When I added the quantum, you can reduce even more over the band, and if you pick a desired frequency, I can make S7 to S8 signals disappear, and make something else pop up.

My flag is about 280 degree's and although the ALA100 is on a rotator,I leave on a north south bearing, the loop is next to the flag. I realise I could improve things further eg better placement, but as last winters logs proved, the set seems to be doing the job.

I look forward to your logs, it must be great being up in Scotland for your hobby, you can imagine the challenge I have in Midlands, not to mention living 4 miles from the Droitwich TX.

If I recall, I was MW Dxing Mid August last year, so it shouldn't be to long now!

Thanks for the info on the Quantum phaser Damien, it sounds like you have a great setup and you have also have had to try different things to get the results your after. I can imagine what its like being next to Droitwich...but hey its just another challenge. I have they same with regards to FM Dxing I am with sight of the Ashkirk TX in the Borders its at about 900ft and Im at 530ft so I get a little trouble from it when using RTL dongles.
Its not long now until the season will be in full swing I have been trying out my antenna the last few nights thunder storms permitting :(and there has been some decent signals from the east coast so that's a good sign

Cheers and good Dxing

3813. US MW LOGS 31-07-2013

Yahoo group: skywavesmw
Date: 2013-07-31 22:09:10 UTC
From: damienread@ymail.com
Topic: 3813 Message: 3813

Looks like things are starting to slowly improve on the MW front, decided to capture a overnight session, I heard nothing on the 29/30, however last night showed an improvement.

kHz UTC Station, programme details, language, .
1390 04.00 WEGP, Presque Isle, ME. ID top of the hour , Weak
1510 04.00 WWZN, Boston, ID on top of hour, Weak
1540 04.03 CHIN, Toronto, ON, News
1570 04.00 CJLV, Laval, QC Nice ID in French
1650 04.01 CJRS, Radio Shalom, Montreal,QC ID on top of hour
1660 04.01 WWRU, Jersey City, NJ ID on top of hour

There were of course a few more but managed the ID's, peak time for myself was approx 03.50 to 04.20 UTC

3814. Directional Antenna

Yahoo group: skywavesmw
Date: 2013-08-01 23:27:37 UTC
From: mattdx538
Topic: 3814 Message: 3814

Hi All, I am looking to build a directional MW antenna for use with my Lowe HF 225, it needs to be tuneable across the MW band too.
I have heard of a flag antenna which you can phase out one direction so it only receives signals from one direction i.e From US and not Europe.
Thing is I have no idea how to build one of these and I have never built anything like this before.

Any help/building instructions would be greatly appreciated.

Cheers,

Matt.

Hi Matt,

If you are on a tight budget, I can recommend this set up, which can be purchased from ebay, click on the link, and look under "small loop antenna's,flags,pennants"

Click Here <http://minstech.com/hamradio.php?pid=7>

You will notice there are a few options, personally I run with the BNC typre,as you can pick up coax terminated with BNC via Amazon for peanuts,, you will have to purchase some PVC wire, say 1.5mm. The seller also offers some designs on his ebay page. I'm not sure how much space you have? But it is possible to make small versions of this.

I run a flag, but with Wellbrook preamps, which costs around £150.00p, the resistor in place can make a major difference in rejecting rear signals, 900Ohms will give you good rejection (suppplied with kit), however again, purchasing a variable resisitor 2K ohms, will help you further, with better nulls, it does really vary, I think I ended up on around 1100 Ohms for my 10m X 3.5 flag.

The kit I have mentioned, work really well, the difference between the wellbrook and the mistech is the wellbrook will dig out the last dreggs of a signal. Whats great, you can make the flag on the cheap, and if you really get on with it, you can purchase a wellbrook at a later date, and simply just plug it in if you are running BNC.

Other things you will need to think about, is placement, for myself,I purchase 2 portable fibreglass fishing rods for about £15.00p off ebay, it really is about looking around sometimes, to see what you can get away with.

Feel free to ask anymore questions, as there are some more knowlegable people on here than myself, where are they you may be asking? Well they are all on the Skywaves other group, as alot on MW Dxers swap over to VHF Dxing during summer months

From: scottishdxer_markborthwick
Topic: 3816 Message: 3816

Hi All
Just been going over my recordings from last night and signals were pretty good in general from the usual suspects ...still for me its the higher part of the MW band that has the signals with the only signals noted below 1000 khz were 590,600,930,950khz
But on the higher frequencies in particular on the X band signals are pretty good, I have been having to pick carefully my recording days due to allot of thundery weather here in Southern Scotland.
All stations were received between 02:00 and 04:00 utc on the 4th August 2013Perseus SDR and Super Kaz Broadside Array @320 deg
Good signals were received from the following, also glad to get a personal first by way of Radio Vea 1570 khz from Guatamala.
MP3 Montage of WEGP, WWKB and Radio Vea <https://dl.dropboxusercontent.com/u/49704474/mwcomp.mp3> Video of Radio Vea 1570khz Reception <http://youtu.be/RHmeahDBtEs>
930 CJYQ950 CKNB1010 WINS1130WBBR1180 Rebelde1390 WEGP1400 CBC1500 Radio Santa Rosa .....this one is a worry as my Super Kaz Array was supposed to have a tighter lobe1520 WWKB1540 CHIN1560 WQEW1570 Radio Vea1580 CKDO1600 WUNR1610 Caribbean Beacon (pres).....Never yet had a station ID1650 CJRS1670 CJEU

Nice to hear stations from my side of the pond strong on your side...and
no static bursts!
The FM Es season has been so poor here that I might as well go back to
MW Dxing with my SDR-IQ and flag, although I think the beginning of
August is a bit early. Maybe not.

Hi Mike

The conditions seem to be improving slowly and it is still early in the season.
Due to local thunder storms I have been unable to record...and some days the static is pretty bad after a storm its just hit and miss...the recordings from the 3rd were deleted pretty quick as the static crashes made listening almost impossible. It wont be long before the FM Dxing guys get back into MWing again

Cheers Mark

Mark,

Thanks for the "heads-up". Just checked my recordings and the last few nights have been pretty good. In fact last night (morning of the 5th) was even better for me.

1540.5 Turbomix was really powering in
1620 was a real battle between Cuba and WDHP with WDHP just winning.

Any idea what the latin on 1200 would be ? Very strong signal at 04:00 with music and possible ID at 04:03. Unfortunately my "ID'ing skills" are pretty poor especially with non-english stations and the heavy noise at my QTH.

Hi Simon
I decided not to record last night due to the massive aurora I thought signals would be well down plus there was a threat of thunder <<< starting to annoy me now :/

Glad to see some stations managed to make it into your log, Lets see what tonight brings although forecast band conditions don't look too promising,

Nice article, but what it doesn't say is that at night if you live in this part of the US over 15 miles from a 5kw station, you can't hear it due to the interference from stations on the same channel. Even WBZ (1030), which at one time could cover ~35 states with its programming at night can't even be heard in Pittsburgh due to KDKA's (1020) IBOC sideband which sits on 1030. There are just too many stations on the air on the MW band in the US and too much HD radio, which nobody listens to anyway. The problem is not all programming.

Hi Mark,
Dito at my end, like yourself I didn't bother, recording from Sunday night onwards. Hopefully things will snap back into focus soon.

Here are my logs up to the 2nd (Still got one more night to listen to)

BTW Nice logs, you got some on your list,I can never get due to local TX's [:)]

> anyway. The problem is not all programming.

Oh yes, apparently he did not listen himself to AM when writing that article?

OTOH I agree with him, back in the 70s it was fun to listen to local shows on
WBZ, I remember hearing lots of local place names of Boston that I then looked
up on the map.
But now network px everywhere. But with Perseus my own listening has
"deterioated" by just listening to recordings a few seconds at TOH / BOT for
IDs. Once I listen live I had this strange feeling: wow, there is more than
just an ID on this station. :-)

Hi Damien just getting round to going over my recordings now and allot of static crashes 0400 seems to have the least QRN...so hopefully something interesting will be found.
Its a nightmare if a strong euro channel masks a TA channel for me I have a few also. yep the season is just around the corner I feel as there is some good logs stating to appear.

Cheers Mark ScottishDxer

3826. Re: Directional Antenna

Yahoo group: skywavesmw
Date: 2013-08-06 20:57:24 UTC
From: Julian Hardstone
Topic: 3814 Message: 3826

Hi Matt, the first thing to consider is how much 'real estate' you have for an aerial. If you can use a typical suburban garden you can probably put up a Flag or a EWE which have been widely described on SkywavesMW and elsewhere.
These are untuned and can be made to give a good null to the rear. For less space
you can use a loop, tuned or preferably untuned, and phased against a small vertical to give a steerable null, so there are many options for home-brewing.

For the Flag or EWE you will need a ferrite-core matching transformer. The Minstech transformers look like a well-made ready answer for outdoor use, but like Damien says you are better using a variable resistor, which you can put in a waterproof box. You can also make your own transformer. I descibed the ferrite components for this in an earlier thread "Flag Antennas etc":
http://uk.groups.yahoo.com/group/skywavesmw/message/3383
and see the other posts in the thread

For the aerial and earth connections I like the brass screw terminals, RS type 668-4590 which I can also supply at cost
A suitable termination resistor is the 4.7kohm potentiometer, RS type 387-795
Screwfix ABS Box type 14556 is a suitable size for housing a transformer or variable resistor and will take the screw terminals and has a cable entry suitable
for co-ax. They also have other sizes

I don't have a design for a suitable phasing unit for a loop + vertical but John may have a schematic

J?rgen has published a design for an 8x3m EWE and has described his use of a reactive termination to optimise the null; I'm sure he will provide the links

If you want to make a tunable filter or phasing unit you will need some variable capacitors, so let me remind you of the first rule of SkywavesMW:
"Members must never throw out any old radio or hifi tuner with mechanical tuning, at least not until they have carefully removed the variable capacitor"
Good mechanical variable capacitors are no longer made for consumer products and are too valuable to dxers to be thrown out!

Hope this helps - Julian

Hi Julian,

That definitely helps, I am in the UK so supplies would really need to be from the UK, but can come from elsewhere if the cost is not too much.

I have a typical surburban garden so a Flag antenna would be great for me, I have always wanted to build one since finding out about them.

Do you have the building instructions and list of parts needed to make a flag antenna with the phaser as like I said I have absolutely no idea about this thing!

Cheers for now,

Matt.

Thanks for that, almost getting lost already, oops! Will thoroughly read that several times.

One question, can you change the direction of the antenna or is it place it one direction only?

3830. 1320 KHz Unid

Yahoo group: skywavesmw
Date: 2013-08-08 22:25:07 UTC
From: damienread@ymail.com
Topic: 3830 Message: 3830

Hi Folks,
Hope someone can help me with this ID, recorded on the 8th August 2013
at 04.03UTC on 1320Khz.
To be honest last night was pretty dire, however caught this one, prior
to the ID they were chatting in spanish, which ended on the hour,
silence for a few minutes, then the ID, which I can't make out.

1320Khz Unid
<https://dl.dropboxusercontent.com/u/91837451/1320KHz%20Unid%2004.03%20u\
tc%208th%20august%202013.mp3>

Many thanks in advance, and lets hope things improving again

73's

Damien

Hi, for ease of trying a simple design you could try this out first, i use the pennant version, they are a doddle to make from a couple of lengths of cable and a resistor of similar value, wind a balun round a ferrite and off you go. Mine works pretty well at nulling the Europeans over NA

From: Chris Thatcher
Topic: 3814 Message: 3833

Hi Andrew,

I am also interested in making an MF antenna, so thanks for your link to the antenna construction page.

Regarding the 16:1 balun, can you please tell me what gauge of copper wire / size of toroid you use and how many turns are on the primary (radio) side into a 50 ohm co-ax?

Myself and Matt both have Lowe HF-225 radios. The radio accepts both 50 ohm unbalanced and (I presume high impedance, long-wire plus earth termination).

Best 73s,

Chris 2E0NDT.

From: Andrew Walmsley
Topic: 3814 Message: 3834

Hi Matt/Chris
I am no expert on this but here are my experiences.

I just use about a 1" diam core and wind whatever cable i have, in my experience it will make little difference, and the dimensions and way its wound again it just seems to work

I think i wound 28 to 7 turns (my feeder is buried away in the bushes remote from here for me to check currently !) you can vary in the ratios to see if it makes any difference anyway
A beverage usually has around 14 to 4 Turns. so you can play around with the windings if you wish to bring it as near to 50ohm as poss

Use the simple diagram at the foot of this page

http://www.dxing.info/equipment/ewe.dx

connect top right to top of flag, bottom right to bottom of flag, also connect this to outer of coax (no need to take to earth)
Inner coax of course is top left

Hope you are as surprised as i was when i first tried this years ago !

Regds
Andrew

Thanks Andrew,

I asked at my local amateur radio club, today. One of the guys, who's experienced with antennas, said that for receive only, the number of turns was not critical. More important is the ratio, eg for a Flag, maintain the 16:1 ratio. He suggested I use as thin-coated copper wire as I could get, and try 2 turns (primary), 32 turns (secondary), round a 1 inch toroid.

As Matt is more enthusiastic to get MW DX, I'll try to help him get set up first.

Best 73s,

Chris 2E0NDT

Thank you Mauno and Max for listening to my clip and identifying the language from my holiday trip.

This is a new log for what has become a yearly trip to Walloon Lake, Michigan.

I am using a 25 ft/8 m verticle antenna I climbed a pine tree to install and ran coax back to our cabin.

Actually it is easier to describe my Portable Antenna setup in my Youtube video of it here:http://www.youtube.com/playlist?list=PLCED329D32CFBDBBF

Thanks again.

Cheers,

John

3838. Re: [skywavesmw] Re: Directional Antenna

Yahoo group: skywavesmw
Date: 2013-08-10 19:51:46 UTC
From: John Faulkner, Skegness
Topic: 3814 Message: 3838

I was hoping to be set up with my flag antenna about now but things will have to wait a little longer.

When I first constructed an antenna of this kind I built the ewe. It proved to be directional across the whole of the MW band once the variable resistor was set. Over time, it was necessary to make adjustments to the variable resistor, usually on a daily basis.

Then I built a flag antenna as I was told it had a much deeper null. This was true, plus it was also more stable on the null. The flag was improved further by improving the transformer and the variable resistor setup. Unfortunately (there's always something), I did not build the transformer or the variable resistor circuit myself, it was done for me, and I do not know the component configuration. I do know that the transformer was the two whole miniature type (less than 10mm diameter) but I do not know the number of windings. The larger, circular, single hole ferrites (an inch or so diameter) did not provide me with such a good match, resulting in poorer nulling, though I do know that the light blue type were better than the grey variety you can buy at Maplin.

I wish I knew the other components of the variable resistor box as this included a three way switch - to add capacitance I think it was, though I could be wrong.

Worse still, I lost these boxes and had to revert to the basic flag design last winter. *I would love somebody to build me these boxes again for me in time fort he season but I am running out of time. If anybody is able to do this I would gladly cover all costs. *

So, a simple transformer and resistor configuration will provide a decent directional antenna, but it will not do the job as well as it could with the improvements. Believe me, it is worth the extra effort as you will find you can eliminate more signals, more successfully, if you take the extra care with the design.

Hope this is of use.

John

Hi, i found there was nothing too critical as you say as well....
Just as another idea, i built one of these, easy to put together

http://www.hard-core-dx.com/nordicdx/antenna/loop/hulaloop.html

Just do the basic loop and coupling capicitor part of it. Works very well,the nulls on it are fantastic, I use it in the shed next to the shack here
Mine looks nothing like the one he built ! its just held together with gaffer tape, but is really good and so quiet if you live in a noisy neighbourhood. I Have heard weak stuff on this i would never have heard on long wires and beverages, its only an s point or 2 down on longer wires, but as it so electrically quiet you here so much more

It's all a bit more "complicated"

I have an 30x4m EWE (dictated by available trees) with variable resistor. It F/B was not very exciting, no matter what R value was used.

So I simulated it with 4nec2 and found out that for a given R there's only one frequency and one specific size giving best F/B. Varying R when using a different frequency did not give the same F/B anymore.

So I added a C or L in series with R, and that gave me the best F/B that I expected for the same size.
Now I used my given size and used R-C or R-L which gave me now a *much* better F/B than with just an R
This is only valid for a small frequency range, for example 1000kHz, but for 600 or 1500kHz that R-L value is now very bad, it has to be adjusted. That's not what I want when doing wideband recordings, also I hate to adjust it whenever I tune to a different channel.

So I did this.
1. find for each frequency the R-C or R-L value that gives best F/B
I used 8 channels distributed across the MW band where a tx is located in the rear at least 500km away.
2. now I found 8 different R-C values
3. these were put in a math program that then tried to find *one* simple R-C-L network that represents the same 8 values as I found in step #1
4. That actually was successful. The network was put in place, and I indeed have the best F/B across the band, much better than I had with the variable R earlier. There's no more need for an adjustment per channel, as it is already optimal. This is now working since 3 or 4 years.

It's a lot of accurate measurement work to find and measure the 8 individual values, they depend solely on your specific environment, so no general values can be given.
But I would do the same procedure again if needed. The benfit is just excellent.

EWE and flag etc. work on the same principal, so I am sure the termination behaves similary.

Because the EWE F/B is *much* better than a single beverage, which really bothered me a lot, I developed the staggered beverage, that now outperforms the EWE. But you need lots of real estate for it.

As a transformer I used BN 73-202 binocular core
3 : 9 turns for beverage,
3 : 12 turns for EWE using 0.2mm diam. wire
http://dx.3sdesign.de/temp/MW-Ant-Transformer1.jpg
It supports VLF down to 10kHz

The advice there is sound, but you must remember that this means the impedance ratio is16:1, not the turns ratio. The impedance ratio is equal to the square of the turns ratio, so the turns ratio should be 4:1. Then we are matching an antenna impedance somewhere around 800 ohms to the 50 ohm rx input. You are unlikely to need a higher turns ratio than 5:1, equivalent to 1250:50 ohms, and 16:1 would be a complete failure

In my last post I wrote rather ambiguously: "The Minstech transformers look like a well-made ready answer for outdoor use, but like Damien says you are better using a variable resistor, which you can put in a waterproof box". I meant that while the Minstech transformers look like a well-made ready answer for outdoor use, you might like to try making your own, and also I recommend that a variable resistor termination would give better results that a ready-made fixed resistor termination.

The twin-hole or 'binocular' core I described previously is the most suitable ferrite core for the transformer, and like John I have used many of these over the years. These should be wound with fine enamel-coated wire, such as you may be able to find from an old transformer or relay or salvaged from a wound component in an old CRT-type monitor or TV. 0.2mm dia. is very suitable and I can supply some with the cores

Two precautions should be taken when winding such a tfmr. First, the edges of the holes can be very sharp and cut the insulation off even enamelled wire, so prepare the holes by grinding a very slight chamfer into each hole with a sliver of hard ceramic or stone, such as flint. Second the ends of the wire should be scraped clean of enamel with a Stanley or Kraft knife then soldered with a rather hot iron and plenty of flux

I have suggested that 4 turns on this N30 core is sufficient for a 50 ohms winding to perform correctly down to 150kHz, in which case the antenna winding would be 16t. I normally use 5 turns for the rx and 20 turns for the ant, and if you wind the 5 turns with a 'tap' at 4 turns plus one more turn, you can experiment with turns ratios of 4:1 or 5:1

You can see such a transformer which I demonstrated several years ago: http://ukradio.info/QRN/, and I mount these on Vero board like J?rgen

Your EWE is supported by trees? How far is the wire from the trees? When I was playing with EWEs I started with wooden poles in different parts of the garden and the usual 1m steel/copper earth rods, and the results were as good as expected, giving strong signals with good nulls to the rear. I then built one approx. 5m ? 15m supported by three trees. The trees had thick trunks and had been kept short by regular cutting (pollarding). The verticals were about 1m from the trunks and the horizontal went through the top thin branches.

The sensitivity was much lower and I could not get any significant null. My decision was that you should not put an EWE among trees and I have not tried it since then, so congratulations if you have found a way to make it work

Julian,
One vertical is about 2m (runs tilted), the other 50cm from the trunk.
One is a very large tree its main branches start above the wire

For this low frequency (= long wavelength) the tree effects can only be minor or nil.
The reason for using a larger than the initial 8x3m EWE was the delivery of
much better levels at the lower MW and LW
Using poles would cause problems, because cattle grazing under the EWE will
surely rub the poles to pieces, the trees withstood that for ages.

Simulations (without considering the supports) using my size confirmed the F/B
I found with my real EWE when using a simple R.
Much more important is the proper complex termination for a given size. That
lesson I now learned.

Sensitivity is similar to my beverage, and I am now glad that the EWE even
picks up the Russian Alphas on 12..15kHz. The problem was the large noise that
got back to the EWE via the coax in this VLF range. I finally managed to fix
that.

I use the beverage in winter to get a narrower front lobe, that is what a EWE
never can achieve.

Hi All
Slowly signals from North America are getting stronger as the days roll in, and hopefully a sign of a good season ahead. I have noted the last few nights that stations from South America have been allot weaker and on today's recordings only a very slight carrier on 1500khz Radio Santa Rosa.
I also note that for me signals below 900khz are still weaker than I would expect not sure if its because of the time of year or because I may have a problem with my antenna. I wonder what you guys are experiencing with regards to signals from North America below 900khz
MP3 Montage 11th August <https://dl.dropboxusercontent.com/u/49704474/mwcomp1.mp3> Stations as you hear them WINS, CJYQ, WLIB, KVNS, CKNB, Caribbean Beacon, WQEW, WDEA

Hi Mark,
I've been finding the same here in Midlands, 930Khz has been weak, anything below just isn't there.
The X band hasn't been to bad. I have to say logs are starting to look good.

Out of interest Mark, how many days recording do you keep before deleting? The reason I ask, as I was wondering if would be helpful to other DXers to keep up to 4 days worth, so we help each other out with ID's, I know John and myself did it last year, and we both managed to more ID's by helping each other.

Anyway only a suggestion, off now for recordings

Hi Damien

That's interesting that your finding the condition's the same with regards to the lower part of the MW band and that really apart from the likes of 590, 600 and 750khz nothing much else at the moment is coming in here in Southern Scotland.

I tend to keep my recordings for a couple of days to allow me time to go over them, if the recording has some great receptions I archive it otherwise if nothing of interest is noted the recording will be deleted and if conditions are poor it gets deleted that day. And it does help to share recordings especially when trying to dig out an ID.

Cheers Mark ScottishDxer

From: Owen Gallagher
Topic: 3845 Message: 3848

Great idea,

Actually I have a UNID, that you might be able to help with ;)

On Friday night (9th August) at 11:30UTC I picked up a station on 1140khz playing "The Savage Nation"(The Michael Savage Show) any ideas what station is was? I was using a Sony SRF-59 barefoot (Liverpool, UK) at the time, and a Sony ICF-SW7600GR to confirm the frequency.

TIA

Owen

From: scottishdxer_markborthwick
Topic: 3845 Message: 3852

Hi Owen

I don't record at 23:30 UTC until later in the season but I will say it would be difficult to ID the station based on the program you heard especially if the program uses affiliate stations like Coast to Coast AM does. Yo would actually need to hear the station ID to be sure

Unless you know for certain that only one station on a given frequency airs that program.

Cheers Mark ScottishDxer

Owen,

Are you sure of the frequency. I would suggest that you may have been receiving one of the AFN Powernet broadcasts on 1143. I'm pretty sure that they transmit Michael Savage at some time on the weekend. I don't think Alex Jones makes it on there though :-)

This prompted me to tune in to 1143 and it is amazing the echo that you get from the multiple transmitters.

Great idea,

Actually I have a UNID, that you might be able to help with ;)

On Friday night (9th August) at 11:30UTC I picked up a station on 1140khz
playing "The Savage Nation"(The Michael Savage Show) any ideas what station
is was? I was using a Sony SRF-59 barefoot (Liverpool, UK) at the time, and
a Sony ICF-SW7600GR to confirm the frequency.

TIA

Owen

Funnily enough it was the amazing echo that prevented me from hearing the
ID, I could not bear to listen for more than 5 min as it was frying my
brain!

I'll try again in the 1140-1143Khz range on Friday.

Many thanks,

Owen.

From: Matt .
Topic: 3845 Message: 3855

This has caught many people out, especially when they were on 873, had lots of people thinking they were getting an American station.
I still don't agree with whoever said switching off 873 but leaving on 1143 and 1107 was a good idea, 873 pretty much covered all the areas those do at night, leaving 873 on and turning off the others would have been better in my opinion.
Sorry this is slightly off topic, I am still awaiting my first Trans Atlantic DX.
Maybe this year!
Matt.

I don't record at 23:30 UTC until later in the season but I will say it would be difficult to ID the station based on the program you heard especially if the program uses affiliate stations like Coast to Coast AM does. Yo would actually need to hear the station ID to be sure

Unless you know for certain that only one station on a given frequency airs that program.

3856. Good Conditions Last Night 14th August 2013

Yahoo group: skywavesmw
Date: 2013-08-14 08:45:13 UTC
From: damienread@ymail.com
Topic: 3856 Message: 3856

Hi Al,
For all those who recorded last night, conditions peak really well at my QTH from 04.00 UTC onwards, the x band really woke up. One of the better days for myself, shame they started peak after the hour, and not before, would have made ID's easier.

Just wondering can anyone help me on 1570Khz, I normally get CJLV Laval,QC , but last night was I had a Latin America station, any suggestion to what it could be ? It's sounds Brazilian to myself, and a talk show?

I also manages to capture this on 1600Khz , It sounds like a ID, again I can't understand Spanish, so prehaps someone could have a listen.

1600Khz Unid

1570 can be XERF with slogan La Poderosa but that of course is Spanish.

1600 could be WUNR MA with Radio Mexico programming.

Thaks Stuart,
I did wonder if it was WUNR on 1600Khz, also on the 1570Khz, I can't really tell the difference between spanish or brazilian, so you may be correct in regards to XERF.I will listen for the that slogan "La Poderosa"

I was hoping one of the crew, had recorded last night to cross reference.

From: scottishdxer_markborthwick
Topic: 3856 Message: 3859

Hi Damien

Just started listening to my recordings and at 03:59.57 UTC on 1600khz is the WUNR ID ..... obviously you may have got something totally different but have a listen at this time and see if you can get the ID.

On 1570khz at 04:00 utc is radio bethel with ID at 04:00.27 UTC and its booming after this time also Radio Santa Rosa 1500khz and Turbomix 1540khz have massive signals

Its pretty depressing for me as the array im using still seems to receive South America like my single KAZ did...just stronger !

Just a quick listen across the band and North America is pretty strong with regards to the East Coast regulars, If I find anything exciting I will post it.

Cheers Mark ScottishDxer

From: simbeav@...
Topic: 3856 Message: 3860

Sorry Damien,

I haven't got an Id for either of those on my recordings. 1570 does look like Bethel, though from the offset.

The good news for me is that the noise source that has been plaguing me since April is missing from last night and the night before. Fingers crossed it ha

Thaks Stuart,
I did wonder if it was WUNR on 1600Khz, also on the 1570Khz, I can't really tell the difference between spanish or brazilian, so you may be correct in regards to XERF.I will listen for the that slogan "La Poderosa"

I was hoping one of the crew, had recorded last night to cross reference.

3862. Conditions to Africa

Yahoo group: skywavesmw
Date: 2013-08-14 21:34:53 UTC
From: Andrew Walmsley
Topic: 3862 Message: 3862

Hi All, Just some of my observations this week... conditions had been good to this direction over the past few nights in the early evenings.

I made a quick recording of VOA from Sao Tome on 1530Khz last evening 13 Aug at appx 2030 UTC if anyone would like to have a listen,
and as i write this its coming in very well tonight

I know its a bit of a powerhouse but can be tricky due to locals

https://app.box.com/s/trnrsvhdr3amqutczw4h

Receiver was a Palstar R30A with a 4ft homebrew tuned superloop used to null out The Pulse from just over the border here in Lancs, which as you will hear does quite a good job of it.

Regds to all
Andrew, Blackpool

Thanks Mark,
I will have a playback tomorrow,I'm certainly no expert,but if my memory is correct,we had a simliar pattern last year, by the end of August, the Latins had become weak, and the north american loud, At one point last year I couldn't believe the signal strength on 1130Khz WBBR new york, it was hitting me from S7 to S9, for hours, shame it was Bloomberg News !

Let see what going to happen tonight!

Nice Recording Andrew,
I will have to have a try, I normally find 1530Khz a bit of a melting pot.
I have to say the audio sounds great, it's been a while since I've heard a non SDR recording.
Anyway the Palstar audio sounds really nice, what size filter were you using?

Thanks everyone for your help,if I can return the favor just ask.

Good news about your QRM going,although I have had nights like that, the difference when those TV's are turned have quite a big impact!

3866. Re: [skywavesmw] Matching transformer for EWE and Flag antennas

Yahoo group: skywavesmw
Date: 2013-08-14 22:14:07 UTC
From: Chris Thatcher
Topic: 3841 Message: 3866

Thanks Julian,

I've learnt something that I didn't know before I read your message...

"*The impedance ratio is equal to the square of
the turns ratio*, so the turns ratio should be 4:1. Then we are matching an
antenna impedance somewhere around 800 ohms to the 50 ohm rx input. You are
unlikely to need a higher turns ratio than 5:1, equivalent to 1250:50 ohms,
and
16:1 would be a complete failure"

This makes sense now. I'm glad you saved me wasting my time and effort,
trying to make 16t to 1t transformer.

You mention that you have some "Binocular" cores and suitable wire for
winding the transformer. I would be very interested to buy these from you.

Best regards and good DX,

Chris Thatcher.

I have a couple of these binocular cores and I think I have some suitable enamelled copper wire somewhere. I just haven't a clue how to wind the things. I need to organise this very soon as I have nothing prepared for another flag and I want to get one made asap.

Thanks if anybody can help.

John

Hi Damien, thanks for comments, i find it best to try around half hour after its gone fiarly dark locally, so maybe picking up some greyline
I was using the 5khz filter in AM, which is very good, and can narrow down to the 2.2 and in ssb as well
The audio is exceptional though and is the nearest i have heard to an SDR type sound for an analogue rx

Ex conditions again tonight on 1530Khz VOA Sao Tome
New recording tonight with better audio setup

https://app.box.com/s/mq3ku9sv9ffurfdms38c

It fades out to The Pulse at the end

Managed to record it yesterday. Got a id on the hour, considering the distance, it is a pretty solid signal, l used your tip for recording at dusk, and even at my qth, pulse is bit of a pain. Thanks for the tip Andrew,makes a nice change from chasing TA MW Dx.

Managed to record it yesterday. Got a id on the hour, considering the distance, it is a pretty solid signal, l used your tip for recording at dusk, and even at my qth, pulse is bit of a pain. Thanks for the tip Andrew,makes a nice change from chasing TA MW Dx.

3873. 1530 STP VOA on Sony ICF-SW7600GR and Sony SRF-59

Yahoo group: skywavesmw
Date: 2013-08-18 09:49:38 UTC
From: pe1etr
Topic: 3873 Message: 3873

The audio was fed from the headphone socket into the microphone socket of a Canon FS100 camcorder, which unfortunately causes some QRM on MW. (More evident with the SRF-59). I just used the internal ferrite rod aerial in each case.

3874. MW List

Yahoo group: skywavesmw
Date: 2013-08-18 11:58:24 UTC
From: John Faulkner, Skegness
Topic: 2981 Message: 3874

It would be great to see all your loggings on the MW List www.mwlist.org Does anybody use this? I know Jurgen does, plus a few others. We can catch up with all your latest loggings this way and it's a brilliant way to keep a permanent record too and be able to export loggings. Yes, I know that sounded like a plug (awaiting my cheque is in the post ;O)

Over the course of the next few evenings I am hoping to experiment with a small Latin American beverage in nearby countryside, though I haven't researched any suitable places where a SW or E beverage will blend in with the countryside. I would plan to look at late evening openings to Brazil for starters. How is everybody finding the late evening period at the moment? Hopefully there will be decent openings to Brazil during the late evenings at this time of year.

Mark - your Latin loggings are impressive. I want some!

Since Latin America was not my best direction here during March/April of this year I don't expect to hear anything exceptional, but we'll see. I am more keen to run out the North American and far east beverages in the coming months if conditions quieten down.

Good DX!

John

John,

I'm not really pointing towards Brazil, but globo has been coming in strong most nights on 1100. I haven't got any evening recordings, but it was very strong at 05:00 this morning.

Thanks Simon. I heard Globo 1100 for the first time here last winter. It was quite weak. WTAM usually occupies this frequency if anything does. I have a local pest Talk Sport 1107 which makes 1100 very difficult indeed - it's the strongest signal on the band here.

31.03.13 0300 1100 B ZYK694 R?dio Globo S?o Paulo S?o Paulo/Rua Hil?ia Amaz?nica SP 150 9655 222 OM vocal ID between music Weak Skeg

From: scottishdxer_markborthwick
Topic: 2981 Message: 3877

Hi John
Not sure what night propagation is like to South America at the moment, because I have just been recording a few hours before and at dawn.... I really need to start listening in the evenings again as sometimes last year it produced better signals than the dawn window.
I was rather hoping that my new antenna configuration was going to cut out South America but Im still receiving good signals from that area
Neil Kazasross ran my Super KAZ array specifications into his modelling software and you can read about his findings here KAZ array model
<http://scottish-dxing.yolasite.com/blog/super-kaz-broadside-array>
Im not complaining as signals are up both North and South America :) I just hoped the effort involved putting the antenna up would have resulted in a better beam-width.
I think i will start and use the MW List to show my logs looks interesting...I have been playing with Station List by Jurgen Bartels and it looks like a really great bit of software very useful in knowing what your tuned to...it was also allot easier in setting up than Perseus database. So look out for future logs :)
Last night recordings were poor with weak signals compared to the last few days so hopefully the band wont take long to recover.
Cheers Mark ScottishDxer

Mark,

I wonder how you are getting on with Stationlist ?

I've also started using it and find the ability to jump between recordings, but stay on the same frequency really useful.

The only problem is that I am regularly getting a "The Perseus control software has stopped working" message when the first recording of the night starts. If I get this, no further recordings take place which is extremely annoying. I've got around it by setting a 2 minute recording for just before I go to bed so I can check all is working, but not ideal. Wondering if it is my set up or if any others are getting it. I've never had it manually runnig the Perseus software or with PRS.

Last season was my first with a Perseus and I used PRS for recording as Stationlist looked a bit complicated. The problem with PRS is you have to set up a new schedule every night. Stationlist with it's many other features would be much better, but reliability of recording is the overriding concern.

Simon.

Hi Simon
Station list is pretty handy when going over recordings or for live listening with its frequency updated database also will make logging easy.
I have not used it for recording so cannot comment on it
But to date the best software I have used for my overnight recordings is TOTH recorder by frequency control http://www.frequency-control.de/ <http://www.frequency-control.de/>
With this software it runs when you have your Vcom on I use port 10 and also have station list on port 10
It is very easy to use basically start VSPE and select your port, start perseus then start TOTH recorder in that order. Then make a list of record times selecting bandwidth and record length it really is the easiest I have used there may be an easier piece of software out their but I don't know of it.....and it would really have to be special for me to stop using TOTH recorder.
I have only ever had a couple of failed records and I put it done to my PC freezing or something, apart from that TOTH has run perfectly

I had similar symptoms, when in Windows 7 advanced power options hard disks were set to be turned off in 15 minutes or so. Also you could set Perseus to Zoom, which seems to make the recording start happen more smoothly. For me StationList fails maybe 2-3 times per season.

To prevent a hangup of Perseus.exe missing all subsequent TOH/BOH recordings,
there is an solution:
Let SL power down your PC between schedules. This will first stop Perseus.exe,
if that fails, the .exe will be killed forcefully. So it never remains hanging.
Since I implemented that, I never found Perseues.exe hanging the next morning.
However you will miss the one recording when it happened.

Why you get "The Perseus control software has stopped working" is beyond me. It
has to do with Perseus.exe, on my XP I never have seen it

It's been a few years since I ran a beverage out during the late evening for Latin America but I remember seeing as many as 40 carriers on some frequencies, such as 1470. This was when I lived in Nottinghamshire. Although only carriers it showed the potential. From the east coast I will have more UK stations to get past.

In the past I have heard strong signals from Brazil as early as 2100, even during the month of October, so that path is definitely there. OK, some of this was up in the north-west of Scotland, but it shows the potential once again.

I know nothing about Station List, though I have seen it mentioned many times. I think I am stuck in my ways with MW and FM List. From what I have seen of Station List, entries submitted appear on the MW/FM List loggings without programme info and just says "via StationList (direct)" , which doesn't tell me much about the programme content. I must say it would be easier to submit this kind of report but I like to include ID slogans, etc. with my MW loggings.

MWList (and FMList) might take a bit of getting used to if it's the first time people have used this database driven type of site, but it is well worth the perseverance. I can recall past loggings and export them in seconds. It's a superb system and one I couldn't live without now. Those who are familiar with FMList will know how valuable it is when it comes to rapid-fire sporadic E openings.

Thanks all.

I'm using Vista unfortunately. I wonder if the problem is running too many other things on the machine without switching off very often (RDS SPY, MULTIPSK, SDR♯, TV♯, SDR-Radio etc, etc.)

Strange thing is, it is obviously an error with Perseus.exe, but I never get it when starting Perseus directly, only with stationlist.

That could be the case. Perseus is controlled via the (virtual) com-port, so it could be that it reacts too slow due to heavy CPU load.
Check if you get the same when only Perseus.exe runs

> Strange thing is, it is obviously an error with Perseus.exe, but I never get

Not strange at all, you operate it by hand, SL by using the com-port :-)

Which serial port emulator do you use? If VSPE , try com0com instead. I had problems before with the Perseus-VSPE-Stationstlist combo which from time to time not started the recording. Changed to com0com and never had a problem again despite hundreds of recording sessions. Stationslist is extremely useful and very stable program, never going to exchange it ...!

Thanks Bernt-Ivan,
that is helpful. I did not know that there's a difference between VSPE and
com0com. I only used com0com, so have been very lucky !

On what Windows did you notice the problems?

Yes, that is true. I have always used only co0com and those that have
had problems have used VSPE.

Hi All
How do you display logs on the Worldwide Visual Logbook, I have used Station List and have my log for today but cant find a way to upload my log to MWList.
When I log into MWList, I have looked under the tab logbook, but their seems no way to input \ upload data
In station list I have set my OM-ID but I did not check the box "post to visual logbook when adding a log" is this the problem? and if so will I need to re-enter all data again?
I'm obviously missing something [:-/]
Thanks in advance
Cheers Mark ScottishDxer

There's no upload. You need to post each one when you hear it

> When I log into MWList, I have looked under the tab logbook, but their
> seems no way to input \ upload data

Correct, SL is not intended to dl or ul logs, only for direct posting

> In station list I have set my OM-ID but I did not check the box "post to
> visual logbook when adding a log" is this the problem? and if so will I
> need to re-enter all data again?
> I'm obviously missing something [:-/]

Not really, you choose to not simultanously post, but then you need to post
with another right click. You also can do that without adding it to the local
log, that's what I do when I only want them to be seen in VLB

Don't worry, the next time you will do better, most signals re-appear the next
days. :-)

Hi All
What a difference a day makes ... yesterday condition's on the MW band were good with signals from both North and South America coming in well, unfortunately my attempts to post my log onto worldwide visual logbook failed.
Today it was only North America received with only the regular stations producing a decent signal there was a faint Turbo Mix carrier on 1540.5khz the only South American.
Stations Logged from 02:58 - 04:30 utcAnd as always my Perseus SDR with Super KAZ array @320deg was used.
Here is my WVL listing
http://www.mwlist.org/mw_logmap.php?omid=1146&datum=2013-08-21
<http://www.mwlist.org/mw_logmap.php?omid=1146&datum=2013-08-21>
I managed to get Station List to post my loggings...only thing is I have to manually change the time as it puts my current PC time and not the time from my perseus maybe that's how it is supposed to work, anyway I will get used to it and will try and share my logs this way.

Hi Jurgen

I was logging from my recordings and noticed that when it appears on WVL it had the current time from my PC instead of the recording time on the Perseus I must have a setting wrong ? So for now I am manually correcting the time :)

Cheers Mark

Don't you use SL's playback selector? It would set the time right, otherwise
you have to do it yourself (which I would not prefer)

1. Ctrl-L
2. check "Use this log-time" and enter time

Hi All
At the moment you never know what your going to receive on your over night recordings, today produced some really strong signals from South America in particular Peru... its almost like I have a pipeline as I never seem to get many other South American Countries. Radio Rubi from Argentina is the only other one that has made it a few times but not today.
North America produced some good signals also, stations peaking to arm chair copy then fading to almost nothing then back again so it is erratic. I did notice however that the bottom of the band had some nice signals from the usual VOCM suspects.
Stations Logged from 02:33 - 05:04 utcAnd as always my Perseus SDR with Super KAZ array @320deg was used.

Hi Jurgen

I found the playback selector and have been using it today...its allot easier now :))
I wonder is their a way to add some comments to my log because as John says when using the post direst to WVL map it only has via station list in the details now I can manually change this but would rather do it as I add the station to the log...I notice I can do it for my log on Station List. Anyway im happy with the program makes things easier.

No, there no interface at VLB supporting it. VLB itself inserts the standard
comment text. It would require Günter to expand the interface.
Why not ask Günter if he would do that?

I personally don't need it as I won't comment at all, but that's just me., :-)

No problem on my side to extend the interface. I think it would require one (1) additional, optional field in StationList. But make it a large field. MW DXers are much more patient than FM DXers and use to note down many details - we would not want to cut.
That new field posted to WVL / VLB, I can make sure it's content goes right into the "Details, remarks" column.

Jurgen, let's sort out the details in private.

73,
Günter

Hi All
The erratic MW conditions continue, but it was good to get a personal first by way of Radio Santa Fe 1070khz from Colombia Radio Maria 1580khz made it also but I have had this station before.
Radio Santa Fe MP3
<https://dl.dropboxusercontent.com/u/49704474/Radio%20Santa%20Fe.mp3>

Some good North American signals but I find it difficult to pin a station down when allot of them carry sports\talk show networks I found a few carrying Red Sox games but cant get a definite ID so I dont log it very frustrating.
There was several stations mixing on 1590 and 1440 khz and I couldn't pick out any definite IDs some frequencies are just nightmares for stations mixing.
Stations Logged from 03:00 - 04:39 utcAnd as always my Perseus SDR with Super KAZ array @320deg was used.
Here is my Log

HI Mark,
Yes it's beem up and down laat week,not sure if it's my QTH, but I am finding WWRU 1660Khz coming in being recieved most mornings, and it being quite a loud signal, the rest of the x band being pretty weak.
Apart from Cuba 1620Khz, and 1130Khz WBBR New York,1560Khz RADIO DISNEY & 1570Khz CJLV, All which are the usual suspects.

Strange, still no signals at the lower end

Excellent Pete,
Just goes to shows that TA on medium wave is possible on a portable. Shame you couldn't connect a outside antenna for the Sony 7600, as you seem to be getting a fair bit of harsh QRM at your QTH.

Again very impressive

Hi Damien

Thats correct about WWRU for me it has the biggest signal on the xband followed by similar signals from the Caribbean beacon and Rebelde and for me above 1000khz is producing the signals with only a couple of days were signals below 930khz were decent, I suppose its still early so cant complain.

3905. Radio Deporte 1590khz

Yahoo group: skywavesmw
Date: 2013-08-27 20:05:27 UTC
From: scottishdxer_markborthwick
Topic: 3905 Message: 3905

Hi All
Just going over last nights perseus recordings and conditions seem
pretty good with some good signals from the usual suspects.
Radio Deporte from Caracas Venezuela on 1590khz is a personal first for
me and 1590khz sometimes has so many signals mixing its like a growl
with no IDs....So it was great to get a positive ID
Receiver was Perseus SDR and antenna was Super KAZ array beaming 320 deg
Received on the 27th August 2013 @ 05:00 UTC
Here is a link to my video of the reception Radio Deporte 1590khz

3908. Latin on 1570

Yahoo group: skywavesmw
Date: 2013-08-29 11:11:38 UTC
From: BEAVAN SIMON
Topic: 3908 Message: 3908

Damien mentioned a few days ago that he had an unid latin american on 1570.

On 28th at 05:00 I got a staion on 1570 which to me sounded Brazilian. In the first few seconds of the clip attached I thought I could hear voz and Cancancao or similar. and further on there is a possible "Radio Gobo".

My ears are old and tired though and it's very noisy.

Can anybody else make anything out.

https://app.box.com/s/4u8194f68rwhwd47els9

Thanks

Simon

The lower half of the band finally came to life this morning. The usual suspects, but some strong signals at 05:00.

At the same time, good to hear WINS dominant on 1010. I don't get that so often with Toronto seemingly taken over.

Hi Simon,
Had a quick playback of last nights recording. X band seemed quite, however you are correct in regards to things on lower frequencies. As you said, nothing amazing,but certainly an improvement.

Hears a quick blast of my recording of CFRB 1010Khz this morning at 05.o0UTC

CFRB Tornoto 1010Khz
<https://dl.dropboxusercontent.com/u/91837451/1010Khz%20CFRB%20Toronto%2\
0ON%2005.00utc%2031th%20august%202013.mp3>

Also in regards to the 1570 Khz that sounded South American, mine turn out to be Radio Bethel from Peru, although thanks to Andrew in Scotland for helping me with that one, as I get major splash on 1570Khz.

I still have this mornings to listen properly, but here are my logs from the 27th

600 05.00 CBNA, St Anthony, NL Very Weak CBC News 27/08
1010 04.00 WINS, New York, Mixing with CFRB, 31/08
1010 05.00 CFRB, Toronto, Good signal ID on hr 31/08
1310 04.41 CIWW, Ottawa, Weak CIWW ID mentioned 27/08
1330 04.31 WRCA, Waltham,MA Oldies music 27/08
1390 04.31 WEGP, Presque Isle,ME ID and Fox New update 27/08
1400 04.30 CBG, Gander NL, Ref to Canada 27/08
1470 04.32 WLAM, Lewiston,MA , "The True Oldies Station 870 & 1470" 27/08
1510 04.48 WWZN, Boston MA. Great Signal, Touching S9 at times! 27/08
1520 04.47 WWKB, Buffalo,NY Best in LSB, Fair Signal 27/08

Hi Damien
Nice sounding clip of CFRB its always good to get it in the clear
without too much mixing, I agree with you and Simon in that things are
picking up on the lower frequencies but still the best signals are mid
to high band...and I also noticed signals reduced on the X band this
morning but overall a pretty decent nights recordings hopefully it
continues over the weekend.

3913. Log for 31/08/2013

Yahoo group: skywavesmw
Date: 2013-08-31 20:39:16 UTC
From: scottishdxer_markborthwick
Topic: 3913 Message: 3913

Hi All
As reported by other DXers MW conditions were pretty good the last couple of days. Here is my log for last night nothing spectacular its just the usual stations but its a promising sign hopefully.

Damien,

It's interesting to see how reception can vary over a comparatively short distance - Cardiff, where I am, is not that far from Stourport when compared with the width of the Atlantic, but, for example, when you were receiving CJEU on the 27th I was getting WPLA Fox Sports really booming in.

I suppose direction of aerial must have a lot to do with it.

3915. Great X band conditions last night

Yahoo group: skywavesmw
Date: 2013-09-01 12:17:23 UTC
From: BEAVAN SIMON
Topic: 3915 Message: 3915

I've just started listening to my overnight recordings and at 05:00 x band was "rocking".

On some frequencies it is too good as I have 2 or 3 stations in a complete mix. There is a latin on 1700, but at vital times it was being swamped by a US station.

But my first "first" of the season. I hadn't got WTNI last year on 1640, but it was blasting in with a massive signal and clear WTNI Biloxi and ESPN IDs.

Simon

Hi Simon,
Thats funny, you being from Cardiff, I am from Newport,so not too far.
It's funny in regards to different receiption, John Faulkner who is in Lincs and myself often found out we had differences on recordings, this was good, as we could help out with ID's.

I think is it's about 75miles between us, and from myself to Skegness is 122miles.

Got to play some files back now,I'm a few days behind lol!

3917. Re: Great X band conditions last night

Yahoo group: skywavesmw
Date: 2013-09-01 17:37:47 UTC
From: damienread@ymail.com
Topic: 3915 Message: 3917

Hi Simon,
Just had a quick playback, it's funny all the X band just fading up at the right time, I managed WTNI here as well, If I had to guess on 1700Khz I would say WJCC Miami Springs in Florida, they normally broadcast in Haitian, and I caught them a few times last season, there is also sports station in the mix, but thats a lottery, 9 times out of 10 it's KVNS Brownsville TX. I also managed WPLA on 1670Khz.

Damien,

I received exactly the same and couldn't make out what was being said then, but just before your recording started I'm sure I heard a bloomberg announcement, so I had it down as WXKS as I have heard them before with a bloomberg ID.

Thanks Simon,
I managed to get a Bloomberg ID last night at 01.00Utc, and also check 1130Khz WBBR that was booming in as usual.

WXKS is a 1st for myself, I could never get a ID out of it last season, so many thanks....Another one in the Bag!

Hi Owen,
I run a WinRadio G33, Wellbrook & Flag 280 degrees and a Wellbrook ALA100m Loop phased with a quantum phaser, you may have guessed I record at night via SDR, and playback later.

To be honest, luck really does play a factor, and although I'm happy with my setup, you can really have bad luck, last night being a good example. Lots of X band signals, and some possible new ones on 1640Khz, but alas no ID's.

73's

Damien

Hi Damien,

Thanks for the info.

Nice setup. I had not read about a quantum phaser, interesting stuff.

Good Luck!

Owen

Hi All
Band conditions were very good overnight with signals from North and South America, I still have a handfull of frequencies that have good signals but so far I cant get an ID out of them so I need to get those ID.
Damien gave the heads up this morning about a station on 1650khz at 05:00utc with a mention of Newstalk after I checked my recordings for this time I discovered it was KYHN from Fort Smith Arkansas. This station is a personal first for me.
Here is the MP3 KYHN
<https://dl.dropboxusercontent.com/u/49704474/KYHN1650.mp3> 1650khz
I also notice that CFBC on 930khz now has a country music format !
Perseus SDR and Super KAZ Array beaming 320deg - 03:55utc-05:23utc
MWList of overnight Log
<http://www.mwlist.org/mw_logmap.php?omid=1146&datum=2013-09-04>
Cheers Mark ScottishDxerPerseus SDR and Station List25x95ft x 25x95ft Super Kaz Broadside Array beaming 320 deghttp://scottish-dxing.yolasite.com/

Many Thanks Mark,

I managed to get a ID out KYHN 1650Khz, just before the hour, it's no way as clear signal as your getting,and a 1st at my QTH as well

KYHN 1650Khz
<https://dl.dropboxusercontent.com/u/91837451/1650khz%20KYHN%20Fortsmith\%20AR%204th%20sept%202013%2004.59%20utc.mp3>

Yes, what a load of signals, the 1070Khz, 1230Khz, 1640Khz (Playing Gospel MX) all around 05.00 utc where frustrating, no ID's at my end

Had a nice ID from WLIB 1190KhZ
<https://dl.dropboxusercontent.com/u/91837451/1190Khx%20WLIB%20New%20Yor\k%204th%20Sept%202013%2005.00%20UTC.mp3>

Perhaps you could have a Playback of 1320Khz at 05.02 UTC ?? And match it with this Unid 1320Khz Unid 05.02UTC
<https://dl.dropboxusercontent.com/u/91837451/1320Khz%20Unid%2005.02%20U\TC%204th%20Sept%202013.mp3>

I really wish I had the signals you get up there in Scotland !

73's and lets hope tonight is good as well

3938. 783Khz Syria -Simon Beavans Tip

Yahoo group: skywavesmw
Date: 2013-09-08 13:03:43 UTC
From: damienread@ymail.com
Topic: 3938 Message: 3938

Firstly sorry,if this has been posted twice, For some strange reason my replies just dissappear, hence a re start of topic.

Thought I would try my luck last night with 783Khz Syria, managed to null out Droitwich 693Khz that was causing overload using my Wellbrook ALA100m Loop.
This was captured around 07.00UTC (I was watching X Factor lol!)

Have a listen 783Khz Syria or have a bash yourself tonight.

Many thanks Simon for the tip, with the dark cloud over Syria at moment, if the US decide to start attacks, who knows if the TX's will remain on.

For those who , like me, hadn't received this before, Radio Maria in Colombia was very strong at 05:30 this morning with songs and prayers in Spanish and most importantly an ID just after 05:30.
I usually just get CKDO.

Simon

3942. Re: Syria - 783 khz

Yahoo group: skywavesmw
Date: 2013-09-08 08:53:43 UTC
From: damienread@ymail.com
Topic: 3935 Message: 3942

HI Simon,
Managed to get Syria on 783Khz, what a good signal, I had a play around to get the signal due to overload from 693Khz Droitwich, however,I ended up just using my ALA100 loop only rather than phasing.

Sad as it is, I was watching the X Factor, so I just let the SDR run.

Have a listen 783Khz Syria
<https://dl.dropboxusercontent.com/u/91837451/783Khz%20Syria%20SRTV%20Da\
mcaus%20around%2007.00%20utc%209th%20Sept%202013.mp3>

Again, Thanks for the tip Simon

Thanks Stuart,

That would be a new one for me.

Unfortunately all the emails from Yahoo groups are playing up for me at
the moment, so I only just got Damien's email and yours hasn't come through
at all !

3949. Great X-band Signals

Yahoo group: skywavesmw
Date: 2013-09-10 18:41:11 UTC
From: scottishdxer_markborthwick
Topic: 3949 Message: 3949

Hi All
I have been going over my overnight perseus recordings and have been amazed at the strength of the signals in particular on the X-band portion of MW. At 04:00utc KVNS was coming in at good levels by 05:00utc WJCC took over and again was a good s8-9. CJLO from Concordia University Montreal was an outstanding signal.
The East coast regulars were all coming in with good signals throughout the morning and it was great to hear the gulf coast area coming in and I got a personal first by way of 1510khz WLAC Nashville. Normally WUFC Boston is the dominant station, it was still there and making reception difficult but I got a good ID of WLAC.

ZNS-1 Radio Bahamas was also a welcome alternative on 1540khz, and XEEP-AM Radio Education Mexico on 1060khz was received.
CJLO 1690khz Video <http://youtu.be/c5isnXuvIoQ> XEEP-AM Radio Education 1060khz MP3 <https://dl.dropboxusercontent.com/u/49704474/education.mp3>

Thanks for the update Mark, yes things have been hotting up. I can't quite match your signals levels on the X band, but yes they are louder!
Wonder If you could have a playback This mornings recordings 11th at 05.32 ish on 1270Khz, I was geting a loud Latin america,that was playing music, and had a female presenter.
I would send you a link, but strange things have been happinging to my posted hyperlinks of late, it's enough to make me go our to facebook!

3951. 1540 - WDCD

Yahoo group: skywavesmw
Date: 2013-09-14 20:33:25 UTC
From: simbeav
Topic: 3951 Message: 3951

I got a pretty clear ID on 1540 this morning at 03:00 from WDCD.

I thought this was off air. I certainly didn't hear it last year and Wikipedia suggests it is off.

Am I receiving ghost broadcasts or is it back ?

Simon

** Personal Skegness 'First'

/Hopefully the formatting remains intact./

I re-built my flag yesterday, with one or two minor modifications,
paying particular attention to keeping the two vertical wires as
straight and vertical as possible. It seems to have paid off too with
some very deep nulls. The direction is currently 350 degrees.

I was surprised to hear how clean the band was too, despite the antenna pointing to the south-west corner of the bungalow. The last three seasons here saw S9+10dB of noise across the whole MW. This time it's barely detectable with a noise floor of -120dB. I still found that sticking a couple of chokes inline made a small improvement, removing a little bit of that background 'growl' and eliminating the need for additional noise filtering for the first time.

Conditions were better than I had expected and the whole band was alive with TA signals, extending as far west as Wisconsin with a tentative WNAM on 1280 with ABC News.

I downloaded the latest version of HDSDR and found I could hear more IDs with its cleaner audio than with Perseus. I wish it were possible to loop the playback on HDSDR though - the one really useful thing that's missing.

*
Notes:*

Chicago was in on 780, 890 and 1000 though they weren't logged as I didn't catch any IDs. The respective formats would have been correct though.

There was a second English station on 1130 shortly before 0500. Maybe KWKH judging by the conditions.

Perhaps that's KDHL I am hearing on 920 at 0500 - it's very weak.

1040 had a newstalk station at 0430, presumably WHO. Not bad going considering the conditions!

Even 1230 is producing audio!

There was so much more too. It's all nice and early in the season and I don't think conditions were generally regarded as being anything great either, going by other DXer's reports.

As last year, I will log all TA stations I hear in order to build a complete logbook, though I will only log the common east coasters once.

Good DX!

Last night I saw good US/CAN signals so I decided to record this morning for
the first time after summer using the EWE
Not bad what came in around 0700 my time, Mexico & Peru among them

http://www.mwlist.org/mw_logmap.php?band=ALL&redir=true&datum=2013-09-15&omid=873

During the day MW looks pretty deserted, I first suspected antenna problems,
but it worked ok. But MW isn't that used anymore as it used to be. Earlier I
checked some Perseus servers in the US, and the difference couldn't be larger.

Hi All

Not sure what is happening with Yahoo but my posts are not appearing and my post from yesterday with Log is still not showing this is a new record as the other day it only took 24hrs to appear.

Its no good if information is going to be out of date when it actually appears.

Great to see you guys have been enjoying the great conditions also with what's in your logs. You can catch up with my progress on my blog if my posts are not appearing

Cheers Mark

Yes, Yahoo is in PITA mode again. It does this occasionally. All groups seem to be affected, judging by what I have read. They have made some major updates and caused people a lot of problems. I wish they'd leave things alone when they are working well.

My MW log from 14/15-09-13 was not forwarded to my Thunderbird inbox but appeared on the Yahoo page. Yesterday's log was forwarded without a problem. As I mentioned on the FM group, I refuse to use the group page as I am a member of at least a couple of dozen Yahoo groups and it's a pain to have to log into them all to see posts, so I have them all forwarded to one place. The downside is that I WILL miss posts which are replies to me.

Conditions were rubbish overnight thanks to a minor blowout so nothing to report here. Still able to hear stations like 1120 KMOX and 1540 KXEL however.

The forecast is for quieter conditions for two or three days after tomorrow. DXLC says: "The geomagnetic field is expected to be quiet to unsettled with a chance of active intervals on September 17 due to effects from CH586. Quiet conditions are likely on September 18-21 becoming quiet to unsettled on September 22-23 as a stream from CH587 influences the geomagnetic field."

Good DX!

John

3959. West Coast in this morning

Yahoo group: skywavesmw
Date: 2013-09-17 13:13:48 UTC
From: scottishdxer_markborthwick
Topic: 3959 Message: 3959

Hi All

Hopefully this post will get out !

I am currently going over my perseus recordings for last night and at 0524utc I have a good signal from KOMO on 1000khz yesterday it was WMVP.

Surprising to see KOMO coming in as John points out the band conditions compared to yesterday seems poor, and I initially thought the same but I am interested now.

Cheers Mark

From: scottishdxer_markborthwick
Topic: 3960 Message: 3960

Hi All
Hope yahoo has got its act together as the last posts I sent have arrived 24hrs later :(
After the excitement the other day in receiving WGFG689 on 1710khz from New Jersey at 10 watts, I was praying for conditions to hold. Thanks to the guys on RealDX group for ID confirmation
This mornings Perseus recordings are fantastic with signals from North America across the whole band with a noticeable signal increase about 05:30 utc.
Perseus SDr and Super KAZ Array 320 deg - 0434-05:33utc
KRJO on 1680khz is now "Country Legends"
MWList Log

From: John Faulkner, Skegness
Topic: 3959 Message: 3961

Hi Mark.

I checked 1000 at 0524 and can hear a North American voice competing against the 999 splatter. It 'sounds' like sports commentary but I cannot be 100% sure as the signal is so weak. The signal peak is about -105dB against the 999 splatter at -90dB.

The vocal intonation /might/ be news at a push but it's too weak to drag anything out here anyway. I can make out the occasional word. If you are interested I can provide a recording made around 05:23+ when the signal was at its strongest.

You've got me intrigued now. I just took a recording, starting at exactly 05:22:50. If you still have this I would be interested to see if it corresponds with your audio.

Recording here:
1000 unid 05-22-50 to 05-24-00
https://app.box.com/s/n8d68wqsm6uh9blx8dnd

Cheers

John

Hi John
I have listened to your clip, and I cant be sure here is my clip from
KOMO this morning
The time in the recording is 05:24.27 - 05.24.54 UTC
See if this is what you are receiving KOMO MP3
<https://dl.dropboxusercontent.com/u/49704474/KOMO1000.mp3>
Cheers MarkScottish Dxer

Wow Mark. Your signal is much stronger than mine. I have to go very narrow bandwidth (about 2kHz in this example) or be splattered out of the picture. (The splatter here increases in strength from about 1002 kHz.) The presenters on both clips sound the same though I don't hear the female in mine. My 1000 signal is far too weak at the time of yours so I don't know if you want to check your recording again at the same time as mine. I have had KOMO a few times in the past here so it's no longer on my list of 'wants'.

Thanks again Mark.

Hi Both,
Just tried playback of mine 1000Khz, from 05.24UTC I have a Sports channel, not sure what one yet.
I have nothing like your recording, I will have to have a proper payback.

Hello all: -- Any Sports programming of any length beyond 2 or 3 minutes is undoubtedly WMVP, as KOMO is a strict News/Talk format, with only brief Sports updates. For the West Coast, try KNX/1070 in Los Angeles, heard in the past in Portsrush via remote receiver. Good 50kW ND signal, with CBS news each hour from :00 to :05 (commercial spot :03-:04), Traffic reports on the "5s", Business news at :10 and :40, and Sports roundups at :20 and :50, plus less competition from 1071. Best of luck!

KNX comes in here often in winter. Other tx from LA are extremely rare.
I wonder what makes KNX so special that it gets thru?

Jurgen Bartels Suellwarden, N. Germany

Poor conditions here overnight. I thought I'd log the Cubans just to get
them in the log but I struggled even with them! The Cuban on 1620
mentioned Habana just before the time pips at 0500 but no obvious ID
other than "La Una". I wondered if this was Radio Bayamo at first as I
didn't hear any of the familiar Rebelde cuckoo sounds. Oh well.
Hopefully better conditions soon.

KNX' transmitter site is only a few kms inland from the Pacific coast, and it has the large, relatively flat plain of the Los Angeles Basin lying to the north and northeast, more so of both than the KFI/640 site. These two are the only high-powered, non-directional MWs in Southern California. -- G H

I see there are 2 towers. Is there another station sharing the site?

KFI tx site looks odd. It's on a parking lot with warehouses around. So ground condutivity can't be that great.

I did not see your posting either.
Probably depends on the ratio urls : text

If there's too little text yahoo may consider that as spam. It seems that yahoo
also tackles the spam problem with the current revamp.
Not easy to solve.

Hi All
As noticed by John and Damien conditions this morning are not as good as previous days especially on the xband with the exception of Caribbean beacon 1610 and Rebelde 1620 that no matter what else is received these two stations seem to always be very good.
I had personal firsts with CFRA 580 and CHAM 820 and Super Radio Tupi on 1280, glad about this one as I don't seem to get many stations from Brazil compared to other Dxers.
One thing that I have noticed with my new array antenna is that the lower part of the band now that stations are coming in ...seem to be allot stronger even this early than I used to get with the Single KAZ.
Super Radio Tupi MP3
<https://dl.dropboxusercontent.com/u/49704474/SuperRadioTupi1280.mp3>
the time was 05:32utc

The Yahoo posts and attachments situation, particularly the latter, has become a BIG problem for many. While I know most of us favour the simple Yahoo Group's system I wonder if some of us are thinking it might be time for a change again? To use the old expression, I don't believe in "fixing something if it ain't broken", but this really IS broken, has been for some time and there are no signs that this problem is going to be fixed in a hurry.

As for using Facebook instead of Yahoo, I don't think this would be popular, but please give your opinions on this. Our Facebook page was designed to /promote/ the group, rather than /become/ the group itself. https://www.facebook.com/groups/skywaves <https://www.facebook.com/groups/skywaves/> It could serve as an alternative platform until Yahoo sort themselves out though.

Around 40 years ago, KNX experimented with a daytime-only directional pattern, in fear of wasting the signal over the nearby surf. They found it easier and just as productive to go ND at all times; today I believe the shorter tower is used as an auxiliary. The KFI site represents a growing trend among US stations, to "rent out" the ground space above the radials; KTAR Phoenix and WSB Atlanta have done the same, among others. KFI's groundwave certainly isn't what it was years ago, when they'd easily reach Phoenix & El Paso all day long. In the L.A. market, KLTX/1390 also has tenants above their ground plate. Also check out the KTNQ/1020 site in West Covina, where an industrial building has been literally built around the towers; that site is shared with KTLK/1150, both high-powered signals.

Hi All, around 2:45 this morning I heard what I believe to be Egypt on 819, it was playing Arabic type music and a quick check of MWlist shows Egypt is there with 1000KW.

I also heard something on 930AM, could not make out what it was, and it wasn't 927 as there was just a heterodyne whistle which went away once I got to 930. It faded out before I could catch any ID and was already falling asleep :(I heard music if that helps anyone? Did I get my first Trans Atlantic DX last night?

Cheers,

Matt.

Hi Matt.

If 930 had a pop format you probably heard CFBC from St John NB (New Brunswick). Pretty good going since we are both on the "wrong" side of the country, here in the east. We need that northerly path to open up across the sea.

Conditions were poor last night too with the best of the transatlantic signals shortly after midnight. Things got progressively worse after this. It was a struggle to hear any TA stuff so I would say your setup is working well.

Other common TA signals to look out for are 1010 WINS New York City & CFRB Toronto. Both have a rolling news format. 1130 is "Bloomberg Eleven Three Oh" from New York and also try for 1520 WWKB Buffalo. For the far east you could listen for Russian on 1521 which is Urumqi in north-west China. This can usually be heard mixing with Saudi Arabia during the late afternoon/early evening.

Good DX!

John

Hi Matt

Certainly sounds like it. CFBC is now country though when I have heard it in last week or so it was the "pop-ish" side of country! I normally either have CJYQ or CFBC dominate on the channel. WBEN is also there but not so common down here anymore. CJYQ have a long-winded id "This is Newfoundland and Labrador" and tend to have an almost "Scottish" sound with much fiddling folk music. Newfoundland is 3.5 hours behind so their TOTH is our BOTH.

John's given you a good target list to aim for to which I would add 1510 WUFC Boston and 1610 Caribbean Beacon. My definition of bad conditions is when I only hear these latter two J WUFC is NBC Sports and 1610 is religion in English with frequent mentions of US addresses and phone numbers. 590 VOCM may be good with you as well - down here 930/1130/1010/1510 is normally always better.

Anyone else noticing that WLIB 1190 seems to be getting out much better this season?

Cheers

Stuart

Interesting re. CFBC's country format. I'd never have guessed that Stuart, it's so much more 'pop'.

Another 100% pop format station to go for would be 950 CKNB. This is in Cambellton, New Brunswick and has regular "95 CKNB" IDs.

Other general observations this season:

920 CKNX has returned. A difficult one last season with KDHL dominating when conditions allowed.

1120 KMOX has been more regular/stronger, but is difficult to get a toh ID. Their CBS News usually starts several seconds after the toh.

1190 WLIB is indeed stronger this season than I have probably ever heard. Still nothing from WOWO on that frequency, which used to be the regular.

1200 WXKS is also stronger and seems to be present just about every morning I've listened this season.

1540 KXEL still as regular as last season. One time a serious DX challenge there is barely a morning goes by when this isn't heard - same as last season.

Good DX!

Hi All

Yes, I think I heard the pop side, the signal was too weak to really gather anything but it was definitely music, surprising what a long wire can pick up!

Definitely need to build a flag antenna to get the best of the signals!

1010 will be hard because of the station on 1008 and I kept checking for 1510 but didn't hear anything :(

Have never heard China on 1521 as Saudi Arabia is always blasting in there as it does on 1440 causing problems with RTL :(

Cheers for now,

Matt.

Apart from Google Groups (which also has a pretty yukky interface,
but at least things actually work), there are other, smaller,
operators - Wiggio and Nabble have been mentioned elsewhere. How
usable they are by email I'm not sure.

> As for using Facebook instead of Yahoo, I don't think this would be
> popular, but please give your opinions on this.

Facebook has one big problem with groups like this: it doesn't
support email. Although it will send you an email when a post has
been made, replying will not work (it says it does, but it
doesn't). Attached files, if you use them, are out as well.

Hi all,

I heard that some people here receive China on this frequency so I decided to give it a shot, at first all I heard was Saudi Arabia but when rotating my antenna I heard what sounds like Chinese music, though I have no idea.

Here are the links, sorry about bad audio quality it was a quick grab my phone and record thing.

https://soundcloud.com/fmbandscan/183154-1

https://soundcloud.com/fmbandscan/183640-1

Anyone got any idea on the language?

Cheers,

Matt.

CJVB Vancouver BC audible at 0500 here with usual Fairchild Radio ID and familiar three pips (at 15 seconds past the hour), then into Chinese.

This seems to be equal strength on both LSB and USB.

It's very weak, but listen for those distinctive time pips at 05:00:15 GMT.

Good DX!

John

3997. 930 kHz

Yahoo group: skywavesmw
Date: 2013-09-22 22:01:51 UTC
From: Satnipper
Topic: 3997 Message: 3997

930 KHz was unusual this morning. Normally either CJYQ or CFBC dominate in London but at 0300 WBEN was loud and clear. However at 0458 HJCS with clear "La Voz de Bogota" IDs was making it through. At 0501 it faded and CFBC ID was heard. 950 was booming around 0500 with CKNB.

Cheers

Stuart

Topic: 4000 Message: 4000

Probably not DX for many of you but at 06:00 this morning (26th) I got WCKY for the first time. 1530 is usually a mix of Pulse, BBC Essex and earlier VOA, but this morning at 06:00 and after WCKY was very dominant. Could be useful for someone yet to catch it.

Proves it's worth checking even your least promising frequencies.

4005. 1320 CHMB Vancouver BC

Yahoo group: skywavesmw
Date: 2013-09-27 09:08:48 UTC
From: John Faulkner, Skegness
Topic: 4005 Message: 4005

This was a pleasant surprise at 0600 this morning, especially as 1470 CJVB wasn't there, or was on a fade.

What alerted me to this was the appearance of Chinese time pips at the top of the hour. Chinese time pips are six pips, but the sixth pip is one octave higher then the other five. After checking the web streams of CHMB, and also CJMR to make sure it wasn't be them, it was clear that I'd had CHMB. The Chinese YL and OM around the hour was the same and the news jingle matched, though it was a struggle. Had it not been for those pips I would have missed this.

Good DX!

John

4006. KKXA 1520khz Washington

Yahoo group: skywavesmw
Date: 2013-09-27 17:05:52 UTC
From: scottishdxer_markborthwick
Topic: 4006 Message: 4006

Hi All
After reading about John receiving CHMB on 1320khz, I was looking forward to going over my recordings. But I had forgot that I cancelled my recordings early this morning before going to work so I did not catch the 06:00utc TOH.
So I checked my 05:45utc recording but did not hear anything like what John described so no CHMB for me, but a station I have had before KKXA 1520khz was fading in and out at 05:41utc. And I managed to get a positive ID and as you will hear in the MP3 KKXA is just about making it over WWKB when the ID is given...but it did peak well into the country music of Rhinestone Cowboy.
KKXA MP3 <https://dl.dropboxusercontent.com/u/49704474/1520KXA.mp3>
this was recorded at 05:41.56utc the ID is right at the start "1520 KXA" and the music fades in at 10sec its a struggle to get past WWKB, You may need headphones.

Overall the band was in really great shape with some very good signals but nothing new unfortunately.
Cheers Mark ScottishDXerPerseus SDR and Super KAZ array 320deg

From: John Faulkner, Skegness
Topic: 4006 Message: 4007

Thank you for this Mark. Here's my recording.

You can just hear KKXA with the Glen Campbell song starting underneath WWKB after a buried KXA ID. But I followed the Glen Campbell song through to the end and the signal peaked perfectly for the next ID which you will hear towards the end of this recording:

1520 KKXA Snohomish WA 0544 27-09-13
https://app.box.com/s/p1oj7vb3q94rcgfjk1b8

I suspected KKXA was there at 0500 but I hadn't got time to go through all my recordings. I still haven't now, so I really appreciate the tip.

Good DX!

Hi John
Glad you were able to receive KXA also, im kicking myself for cancelling the recordings early I wont make the same mistake again as can be heard in your clip and as I thought KXA was peaking nicely just as my recordings came to an end.
In case your interested the song that comes after the ID and glen Campbell is Dwight Yoakam and "guitars and Cadillacs"
I got a QSL card from KXA back in January so if you want the QSL info let me know, they said my email report was the first from Scotland !
Cheers Mark

Hi John

Glad you were able to receive KXA also, im kicking myself for
cancelling the recordings early I wont make the same mistake again as
can be heard in your clip and as I thought KXA was peaking nicely just
as my recordings came to an end.
In case your interested the song that comes after the ID and glen
Campbell is Dwight Yoakam and "guitars and Cadillacs"
I got a QSL card from KXA back in January so if you want the QSL info
let me know, they said my email report was the first from Scotland !
Cheers Mark

4013. StationList V2.1.2.7 released

Yahoo group: skywavesmw
Date: 2013-09-28 20:07:40 UTC
From: Jurgen Bartels
Topic: 4013 Message: 4013

FM+ support:
- FM+ can be controlled via SL as long as frequency settings are done via SL.
The "closed box" concept of FM+ prevents SL from reading out current settings of FM+
- FM+ compatible time scheduled recording are made when specifying a frequency of 87500 ... 108000 kHz.
SL uses Perseus.exe for it.

Posting logs to Visual Logbook
- now allows to include a comment
- will update the time stamp of the entry (if present) in the local log
This entry will be shown pink to remind you what you logged the last 6 hours, and prevents you from
re-posting to VLB during this period.

Playback-Selector:
- Squelch-level setting remains unchanged when playing a different file
- Perseus-playback-position calculation now with higher precision allowing the use of more than 30 steps
- reduce the shown wav-files to a specific day
- Extract and copy a WAV-file: (similar to WavChopper)
the section marked as playback loop on Perseus' trackbar can be copied to another file

Server-Selector:
When server-geo-coordinates are filled in, the QTH reference is set to those,
and a separate window then shows tx in that vicinity (default: 400km radius).
Distances are shown in respect to that server site.

Show stations X km around a remote Tx site
- Lists only stations located inside an area with radius x km around the selected Tx
- Lists only stations located inside the path from a remote tx to your QTH, very useful during sporadic-E.
Paths can be visualized in google maps to assist in studying propagation paths

Screenshoot Perseus Waterfall now with option to store into user defined file

OnAirUTC column: allows from- or -til time only entries. Example: "0800-" or "-2100"

Antenna-Selector: supports coax-controlled switch

http://zeiterfassung.3sdesign.de/station_list.htm

1000 0300 USA KOMO Seattle WA. ABC News on the hour on WMVP fade. Has to be KOMO.
Rolling news format. 7591 km

1470 0300 CAN CJVB Vancouver BC. You're listening to Fairchild Radio, Vancouver's
multicultural station. Three pips and YL ID in
Chinese 7453 km

After checking conditions at 0500 and 0600 I had almost decided to scrub any earlier top-of-the-hour recordings. 0400 wasn't much better but there were promising signs. I assumed 0300 would be too early for anything out of the ordinary, but how wrong I was, for CJVB's ID was audible with reasonable clarity on 1470 at this time!

ABC News on 1000 is undoubtedly KOMO, but there were several other interesting stations which did not peak on the hour. A second talk station on 1130 appeared after 0230 but faded out by 0300. I understand KTCN was reported elsewhere in the UK this morning so maybe it was that.

I was also quite interested in the ID on 930, also at 0300: "One Word, One Station" was all I could make out, but I was wondering if this ID pointed to CJCA. It probably wouldn't be CJYQ as their top of the hour is our half past the hour. CFBC were dominant with their country format.

The northerly path is opening up!

Good DX!

Hi All
Some really big signals on MW this morning, nothing was going to make it past WWKB today at my location.
I notice John was receiving the West coast at 03:00utc however with me KOMO was in at 06:00utc with a good ID but no sign of CJVB on 1470 well nothing that would ID it.... no sign of the pips that John mentions or any reference to fairchild like in his MP3, but at 03:07utc I was getting a good signal of what was certainly Chinese by a YL so not sure if that would have been them so it remains on my wanted list until an ID comes along.
Overall very promising with the West coast making appearances over the last few days.
Jurgen your new version of Station List works well, and I can now enter comments when posting to WVlog. Thanks for this !

Hi All,
Haven't checkrd in for a bit, yes amazing signal strength on certain stations, like yourself Mark l had a try on 1520, just couldn't move WWKB.
On the positive side, l have days of DX fishing ahead, can the north americans get any louder?

** Personal Skegness 'First'

Poor conditions overnight.

Surprised XERF and WPLA don't feature in my Skegness log. For the record, I made the decision to start my log again from scratch when I moved to Skegness as it seems to be very different to my old Nottinghamshire QTH - better for the high latitude path but much worse when signals have to go across land since I am beaming across most of the UK.

Good DX!

1500 0400 PRU OBX4I Radio Santa Rosa, Lima/San Miguel (lim) Clear ID, Radio Santa Rosa,
la primera emissora, ... etc. 10258 km

** Personal Skegness 'First'

The geomagnetic forecast gave unsettled conditions overnight. Instead, we had a much bigger disturbance which resulted in a near total wipe-out of North American activity from around 0400. There were many Spanish stations on the band at this time but still plenty of North Americans at 0300. Conditions were interesting with one or two less common stations, as can often be the case at the point when conditions blow-out.

Listening tonight, however, the band seems to be almost devoid of any kind of transatlantic activity with only a few very weak carriers visible.

Wishing the band a speedy recovery. Get well soon! :O)A

Hi Damien.

I am hearing ESPN Radio at 13 seconds. I think I hear call letters immediately after this but it's not clear enough for me. I suspect this is WRED Westbrook ME, the usual ESPN/YSR suspect.

4026. Peruvian Morning ... with Florida!

Yahoo group: skywavesmw
Date: 2013-10-03 10:06:12 UTC
From: John Faulkner, Skegness
Topic: 4026 Message: 4026

There are lots stations 'getting away' this morning. I have only managed to catch an ID from Radio Bethel 1570 so far, but there are potential Peruvians all over the place. 1540.5 is just audible with lively Latin music so presume Turbomix. 1400 has lively Spanish music - not sure if Callao. Latin love songs on 1380. A STUNNING signal from presumed WLQY on 1320. Presumed WJCC 1700. Plus many other carriers and Spanish snippets all over the place.

The peak time for these is 0530 to 0545 for me.

Good DX!

John

From: Kugellager
Topic: 4023 Message: 4027

Here is what I am hearing.

Between 00:10-00:12 I hear what I think is "Team WMLU" followed bay a garbled town name or something else.

At 00:13 ESPN Radio like you hear.

Between 00:20-00:23 I am fairly certain I am hearing "WKLV News"

This might make sense in that WMLU (Farmville Virginia) is a local university station (Longwood University) on 91.3FM and WKLV (Blackstone, Virginia)is a Sports Radio station in an adjacent county (40 km away) on 1440 as well as an ESPN affiliate. I would not be surprised if WKLV carried Longwood U sports.

I am using the Equalizer function on Windows Media player with the sliders set as follows: 31Hz at 0, 62Hz at 4, 125Hz at 8, 250Hz and 500Hz at 12 and 1kHz through 16 kHz at 0.

This works with my computer speakers but may not work with yours. Getting rid of the high end will surely help.

Hi All
Conditions are down on the MW band compared to what we have been enjoying over the past few days and I noticed in this mornings recordings that North America was coming in well above 1200 khz with hardly a sign of WINS or WBBR.
KBGG and WLQY MP3
<https://dl.dropboxusercontent.com/u/49704474/KBGGandWLQY.mp3>

I bagged a personal first by way of KBGG Des Moines on 1700khz and in my MP3 you will here Queen we are the champions followed by the station ID at 05:59.58 utc
I also received WLQY 1320 with a good ID and this is at the end of my MP3 after KBGG and the clip was from 05:58.48utc.
KXEL , KCJJ and Radio Santa Rosa Peru were also received. The Caribbean beacon and Rebelde were at local levels and as I have said before its like I have a pipe line to them.
As always Perseus SDR and Super KAZ Array beaming 320 deg was used

Hi all,

Tuesday morning around 3:56 am I heard this on 891, I have no idea what it was and as you can hear it is totally overpowering 538 which is always audible here, you can hear 538 id at 13 seconds in.

https://soundcloud.com/fmbandscan/891-unid

Anyone know what tune this station is from? It was a really strong signal!

Cheers,

Matt.

Hi Manuo,

Wow that's crazy, considering there is Algeria, 538 and I think Portugal on that frequency. Wonder if it affects 538 in Holland?

It's another case of a signal from far away overpowering a signal from across the water, like when Saudi Arabia beats Luxembourg on 1440.

Cheers for the ID!

73's, Matt

From: John Faulkner, Skegness
Topic: 4034 Message: 4034

1320 0544 USA WLQY Hollywood FL. Presumed with Creole-sounding language. Reaching good levels at this time but faded well before the hour. 7110 km
1570 0545 PRU OCU4J Radio Bethel, Lima (lim) Clear "Bethel" ID at 05:45:49. Slow songs. Regular YL vocal drop-ins. Weak but clear and mixing with a weaker second Spanish station. 10255 km

A very frustrating morning where conditions seemed very good to areas like Peru, Florida and the Caribbean, but it was a morning where so many stations got away.

Good DX!

Time: 1700 06-10-13

This is a Perseus SDR wav file of MW reception at 17:00 this afternoon using a flag antenna pointing at approximately .

Please feel free to make loggings from it, credit them to yourselves, etc. I am only pleased to learn what is coming through which I might have missed as I am unfamiliar with a lot of Asiatic DX.

Apart from the good signal from China on 1521 I hear Chinese time pips on many other frequencies. I think South Korea, India and Taiwan might feature here too. See what you can find.

*** This zip file is hosted on the Mediafire filesharing site. You may be requested to enter a Capcha code before you download the file. You might even get a pop-up advert but trust me these are harmless. Just so you know. I find Mediafire is an excellent place to store files of up to 200 MB in size.

Good DX!

John

Thanks for that John, you've really got me depressed now. I knew that the noise level at my QTH was horrendous, but this is the first time that I have downloaded a perseus file from somebody else and it has almost made me cry. I might as well give up. I think I'm going to have to move into a tent on the Brecon Beacons :-(.

Nice to hear the exotic signals, though, Stations like BBC Radio North Yorkshir... Only Joking. Lot's of Asian sounding signals, but all new to me and I've little chance of ID'ing any.

As I say, thanks for the glimpse of how the other half live.

Simon

SIMON - DON'T BE DEPRESSED!

I am lucky with FM DXing here as the band is virtually empty, but medium wave is a totally different ball game. I have huge splatter from European stations overnight. When I hear the signals recorded by DXers in Scotland I drool uncontrollably! I doubt very much whether the MW band is any easier to DX on here than it is with you. If anything you will have less UK stations to go through. The western side of the UK is traditionally better for most transatlantic paths, whereas here I have to wait for the northerly path to open up over the North Sea. There is so much UK and European QRM (I am closer to the continent) that I often have to set my IF bandwidth to 1.5 kHz to hear anything.

I mo not the other half, believe me, but thanks for the nice comments. My medium wave is very clean this season, which is a refreshing change from the three previous ones where I had to connect several chokes inline to minimise the S9+10dB hash which obliterated the band. Obviously something has changed for the better this season. The flag antenna is also a very quiet antenna, electrically and it seems to do a fine job.

The benefits from here on the east coast are obviously with Asiatic DX, where I have a sea path to begin with. Looking at South America, my worst direction, I have failed to hear much over the last few days while several other DXers in England and Scotland have heard quite a few exotic catches from Peru and Colombia, plus others.

So cheer up! ;O)

John

It's more the electrical noise living in a built up area that is my main problem, although I do have to apply the attenuator when recording the whole medium wave band as the local "Gold" transmitter is half a mile away.

Just when I think that one misbehaving switched mode power supply has failed / been thrown out / moved house, another source appears. I had a clear week about a month ago, but things are bad again now. I think part of the problem is a PLT as most of the upper Short wave bands are blasted with curious oases around the ham bands, but I'm not sure if that is affecting Medium Wave - It's probably many things, but of course in the UK these days it only matters that some dodgy companies can make money selling Chinese sweat shop goods.

06-10-13
981 1700 CHN CNR1, Many sites. At least three lots of Chinese time pips and Chinese YL
1098 1700 KOR HLCJ KBS 1, Jinju (gsb) Presumed with familiar time signal 8978 km
1467 1700 KGZ TWR Asia, Krasnaya Rechka (cuy) Interval signal and ID 5409 km
1521 1700 CHN China Radio Int., ?r?mqi/Hutubi-SARFT654 (XJ) ID on the hour 6041 km

07-10-13
1290 0300 VEN YVLF Radio Puerto Cabello, Puerto Cabello (cbb) ID at the top of the hour 7637 km

From my 1700 SDR file on 06-10-13:

720 Chinese pips
738 Chinese pips - x2?
891 Chinese Pips
918 Chinese pips
936 Chinese pips
981 At least three Chinese pips here, Chinese music, Chinese OM
1044 Chinese pips
1134 Oriental?
1170 Oriental?
1287 Oriental music?
1359 Chinese pips
1377 Chinese pips
1413 Chinese pips x2?
1467 TWR Kyrgyzstan xd South Korea?
1494 Chinese pips x2 or maybe 3, plus Chinese music
1539 Chinese pips
1593 Chinese pips

** Personal Skegness 'First'

Conditions still dreadful to North America, although there was a slight recovery around 0100 when WXKS re-appeared on 1200 and CBG returned to 1400. These had gone by 0200.

Hopefully some more monitoring of the far east later this afternoon. I'll upload an SDR file or two if conditions are good.

Good DX!

I recorded another file at the same time this evening. Conditions weren't so good and Saudi Arabia was present on 1521 which would tie in with the slightly less settled conditions. I still hear Chinese pips on a few frequencies but conditions seem to have swung further to the south.

I haven't uploaded the file this time but if anybody wants to compare reception tonight with yesterday's, just say so and I will upload it straight away.

Cheers

John

John,

I set my Perseus to record at 17:00 tonight and as I suspected it was a LOT noisier than yours the day before. As you say, Saudi Arabia was strong, but I didn't get anything Far East sounding.

Do you know what the Koran sounding station on 765khz would be (Iran ?). On your recording the day before it ws Radio Rossii clear and by itself, but today I got Koran recitals quite strong mixing with Essex (Which I suppose you would null).

I haven't really studied tonight's file in detail, only checking for Oriental stations and I didn;t bother with much since conditions seemed less interesting. I am not much good with Arabic signals. I'll upload my file if you'd like to have a listen. I just don't have much free time this evening.

Will send the link as soon as.

Cheers

Thanks john.

It will be interesting to compare, but I will not be able to listen until tomorrow evening.

1280 0501 PTR WCMN NotiUno, Arecibo (PR) Talk and ID 6848 km

It was a struggle to hear this. WCMN used to be a regular pest too. It's exotic DX now!

What has happened to the conditions? The indices are low but the DX keeps getting less and less. North America is almost non-existent with nothing getting through from NYC or NE Canada. Only one heard this morning on 1540, the station with the "your ideas matter" slogan at the top of the hour. There's never an ID with this one.

Only one other station of interest heard overnight on 1390 at 0500. Perhaps WISA Isabella with back-to-back Spanish slow/love songs. No IDs.

Good DX!

Yes John,
I have to agree, conditions have been dire for the last few days, l think we are just going to have to wait, due to the big radiation storm we had 3 or 4 days ago

4050. 1660 Khz Unid

Yahoo group: skywavesmw
Date: 2013-10-09 21:56:59 UTC
From: damienread@ymail.com
Topic: 4050 Message: 4050

Hi All,
Hope you can lend some ears ? Managed to capture this recording last night on 1660Khz at 02.01 UTC.
I suspect it is KXOL, as I am sure I hear "Favoita" mentioned. As you can guess Mexican is not my strongest point !

1660Khz Unid
<https://dl.dropboxusercontent.com/u/91837451/1660Khz%20Unid%20Possible%\
20KXOL%20%209th%20october%2002.02%20UTC.mp3>

Yet again conditions where pretty dire once 03.00 UTC came.

It's WGIT Puerto Rico which is the usual Spanish language station on this frequency. Later in the night WWRU in Korean (though with EE ID at TOTH) was dominant.

I can't make too much out Damien. Maybe the guys on Real DX can help, but as Stuart says, this is more likely to be WGIT. KXOL has a Mexican music format, Mexican music being very distinctive. That's not what I am hearing here. I doubt the conditions would have suited a Utah path this morning unfortunately. KXOL has been heard in the UK before but it's quite a rarity.

Sorry. :O(

From: John Faulkner, Skegness
Topic: 4054 Message: 4054

1290 0300 USA WJNO West Palm Beach (FL) Can just make out call letters on the hour under Venezuela 7044 km
1590 0500 USA WARV Warwick (RI) You're on 15-90 AM Life Changing Radio WARV Warwick - Providence. 5308 km
1400 0600 USA WOND Newstalk-1400, Pleasantville (NJ) WOND ID atop CBG 5673 km
1450 0600 USA WPGG "WPG Talk Radio 1450", Atlantic City (NJ) Clear WPG ID. Fair! 5670 km

An improvement! It seems a while since I have heard North American signals like this. New York City stations were particularly good overnight between 0300 and 0600.

More good news in that 0700 is now waking up.

Other observations:

It was a more Florida morning this time with quite a few bits and pieces of audio from the more regular Florida stations. Although I didn't ID them, look for 610 WIOD Miami, 1020 WURN Kendall and 1360 WKAT (Spanish religion - IDs as Radio Luz). I think they were all present this morning, particularly at 0300.

1200 WXKS is becoming one of the strongest and most regular North Americans. This can be heard with Bloomberg IDs on the hour.

I will be looking towards the far east this afternoon.

Good DX!

1422 1600 CHN CRI, Kashgar=Kashi (XJ) CRI interval signal clear under Germany 5715 km **
558 1700 CHN Xinjiang RGD Uighur/CNR 13, ?r?mqi/Hutubi-XJTS631 (XJ) Presumed with Chinese time signal 6042 km **
1359 1700 CHN CNR1, Many sites listed Pips and YL ID, as others **
1377 1700 CHN Xizang RGD Hanyu, Lhasa/SARFT602 (XZ) Tibet! Pips and ID 7474 km **
1377 1700 ARM TWR Asia/Voice of Russia, Gavar (grk) ID and TWR jingle 3626 km **
1539 1700 CHN CNR 1, Golmud/SARFT916 (QH) Time pips and ID 7135 km **

** Personal Skegness 'First'

Putting the above loggings down as firsts as I have never logged them from home before, only on BOG DX trips to The Wash.

I believe the 1359 site is Golmud though I don't see it listed in MW List. Can anybody confirm this?

Other oriental stations heard were as follows - all at 1700:

558 Chinese pips
729 Japanese time signal? (no S Korea listed here)
738 Xinjiang RGD 738 Zonghe, Kashgar or Urumqi
891 Chinese pips. Chinese/oriental music. Possible South Korean time signal too
963 Chinese pips
981 Four or five lots of Chinese pips
1413 Chinese pips
1494 Chinese pips x 2
1539 Chinese pips

North America was relatively poor overnight.

Good DX!

4056. Chinese pips

Yahoo group: skywavesmw
Date: 2013-10-13 08:53:41 UTC
From: Fast Logger
Topic: 4056 Message: 4056

Hi

Here in Beauvais, not much Asian action at sundown.

Only Rajkot-1071 and NW Iran (936/1026) when it gets real dark.

I'm sure the question's been asked before,but is there a website where I can find a recording of what you call "chinese pips", in what do they differ from other stations' pips ?

Many thanks

PP

4057. Re: [skywavesmw] Chinese pips

Yahoo group: skywavesmw

From: John Faulkner, Skegness
Topic: 4056 Message: 4057

Good question, and one I am often taken to task over.

*Do pips = station ID? No! They never will, but if something is unique to a station, be it a carrier, an interval signal or a national anthem, etc., it indicates that something may need further investigation. *

Just before reading your email I was actually thinking of carrying out a simple study of these time signals by recording and analysing time signals from stations in the far east. I also have access to a couple of Finnish DXer's SDR files of Asiatic MW DX which give me a good comparison. I will never hear everything they hear, but at least I know what I am looking for.

To begin with, the Chinese pips are thus: https://app.box.com/s/izntnnxquqo66dclh7a8 Six pips total. First five pips 800 Hz, sixth pip 1600 Hz.

Japanese time pips: https://app.box.com/s/x4u8zqurvn3iyytp12rn Four pips total. Three pips at 440 Hz. Fourth pip 880 Hz.

The examples used are 981 CNR1's multi-tx and 774 JOUB.

Chinese time pips never seem to be bang on the hour and I have known them to be as late as 90 seconds after the hour. They do not seem keen for precision and even their Chinese language stations in Canada have the same problem. Japanese time pips always seem to be bang on.

I can't find any South Korean time signals for the moment but I seem to remember they are the same as Japan's, but please do not quote me as I am just beginning to get my head around this.

In an ideal works all signals will be strong enough to hear the vocal IDs and they are what really matters, but I have to face facts and accept that I will never hear DX like they do in Scandinavian countries, so the additional knowledge of the respective time signals is only a lead-in to something which requires closer inspection.

Hope that will do for starters.

Any further knowledge of these Asiatic quirks would be welcome. Perhaps one of our Scandinavian members would be so kind as to post a list of commonly heard Asiatic DX targets so we UK DXers have a better understanding of what we need to be looking for.

Thanks

John

You are all welcome to use both my remote receivers online here in
eastern Finland: Perseus and AFEDRI-SDR connected to a 400 m wire beamed
to East Asia. The first stations have already faded in:
1593 CNR1
1575 VOA Thailand
1566 FEBC Korea
1557 RTI
1521 CRI Russian
1476 R Thailand
1467 TWR Bishkek
1413 JOIF Fukuoka
etc.

73, Mauno

4064. Skegness File: 13-10-13 1600

Yahoo group: skywavesmw
Date: 2013-10-13 16:47:02 UTC
From: John Faulkner, Skegness
Topic: 4064 Message: 4064

Quite different conditions today ...

http://www.mediafire.com/download/kz1s64ic5a0c2v4/2013-10-13_1600_(JF_Skegness).zip

The 1600 file was interesting in that 1521 Urumqi wasn't very good at all, yet I am hearing a presumed Korean (with those familiar four time pips) on 1098. Or is this actually Taiwan? The OM ID is clear but I don't know what he is saying and I don't have anything to compare it to as the Finnish SDR files I have reveal different stations to the one I have here.

China seems down but checkout the Korean pips on 1134 too. Still lots more to listen to. Chinese pips on a few different frequencies this afternoon too.

Sorry for the slightly noisier recording (-115dB) This has increased across MW over the last three days/nights so very weak stations might not get through. Hopefully something of interest anyway.

Good DX!

John

4065. ID help please?

Yahoo group: skywavesmw
Date: 2013-10-13 16:52:14 UTC
From: John Faulkner, Skegness
Topic: 4065 Message: 4065

Is this South Korea or Japan ID on 1413?

This was taken from one of the Finnish SDR files. It sounds like the same "KBC" ID I have on 972 and 1170. The thing is, I don't see any South Korean stations listed on 1413.

Thanks

John

Hi Guys

What lists are used for these mw stations from the eat. Im just using various ones that I collected or written when seen logs...and they may be out of date. Have not been on mw or sw for some time...I moved over to the Dark Side (Ham radio) but fired the 7030 up today and getting a new flag up to the east in the week.

Heres what i hear on this one:

1593 China
1575 VOA Thailand jingle 1600:06 (weak)
1557 Taiwan pips
1467 TWR Kyrgyzstan
1359 China
1305 China
1224 KOR TWN or Japan
1134 KOR TWN or Japan
1098 TWN I presume
981 China
972 Korea
765 China with late pips after hour?
639 Iran behind Czech R
612 Very weak pips - prob Taiwan

Subject: [skywavesmw] Skegness File: 13-10-13 1600

Quite different conditions today ...

http://www.mediafire.com/download/kz1s64ic5a0c2v4/2013-10-13_1600_(JF_Skegness).zip

The 1600 file was interesting in that 1521 Urumqi wasn't very good at all, yet I am hearing a presumed Korean (with those familiar four time pips) on 1098. Or is this actually Taiwan? The OM ID is clear but I don't know what he is saying and I don't have anything to compare it to as the Finnish SDR files I have reveal different stations to the one I have here.

China seems down but checkout the Korean pips on 1134 too. Still lots more to listen to. Chinese pips on a few different frequencies this afternoon too.

Sorry for the slightly noisier recording (-115dB) This has increased across MW over the last three days/nights so very weak stations might not get through. Hopefully something of interest anyway.

Good DX!

John

I read somewhere, that Taiwan has stopped using 1098 kHz between 1300-1700.
Here CNR11 Golmud usually dominates.

You forgot to attach it, but JOIF is just the call, the station is called KBC Kyushu Asahi Hoso and it mostly IDs as KBC Radio.

This one sounds quite interesting too. 972 is perhaps even better. Not sure if I hear the Philippines on 1170 this time.

We have visitors at the moment now so I will have to catch up with the mail later.

Good DX!

From: scottishdxer_markborthwick
Topic: 4074 Message: 4074

Hi All
I have been listening out for some DX from Asia spurned on by the poor conditions towards North America and some of the exotic catches John has been receiving.
Last night I managed a personal first by way of Radio Payam 1188khz Iran but that was it, no sign of any Korean or Japanese stations. CRI on 1521 khz was booming in at the same time around 20:00utc
Tonight I tried a recording about 17:00 utc , but nothing new to report other than what I presume was AIR on 1071khz going by the music that was playing and at times it was dominating Talk Sport but unfortunately no ID as the music went on for ages and faded when the talking started ..
And as Paul points out around dusk the Spanish stations start appearing plus I get troubled mainly by West UK stations. But I will keep trying.
YOUTUBE video of Radio Payam and CRI <http://youtu.be/5QZFwtrHEp4>

Thanks Mauno.

So no pips from JOIF. That nicely links the 1413 pips to S Korea then. I don't see this in MWList. Do you know which site it is?

Good DX!

Hi John,
I didn't say, that JOIF doesn't use any pips, I just don't pay any attention to pips. In principle it would require to know, that no other station uses similar pips on the same frequency and I don't know that. Was the recording at 1700? I tried to compare the 1413 pips to South Korea and it sounds to me, that KBS uses 3 short and 1 long, while KBC uses 2 short and one long.

Good DX to you, too.

I understand now. Thanks for the clarification.

The 1413 pips recording was not one of mine, but it was made at 1500. I have another recording of 1413 at 1300 too and it's still the same the station.

Thanks Mauno. I still don't know which Korean transmitter this is on 1413.

Best wishes!

There is no South Korean or KBS station on 1413 kHz. The recording below had the Japanese station with 2 short and 1 long pip. Does your other recording have 3+1 like KBS has? What day was it? Maybe I have a simultaneous Perseus recording to check?

4080. Re: [skywavesmw] ID help please?

Yahoo group: skywavesmw
Date: 2013-10-14 14:48:51 UTC
From: John Faulkner, Skegness
Topic: 4065 Message: 4080

This conversation has become slightly confused.

Originally, I assumed I had received the South Korean KBS on 972 and 1170, together with an ID. According to MW List there are no Japanese stations on 972 or 1170, but there are South Korean stations. Paul alerted me to these two. So I checked IDs and web streams, etc. to make sure the IDs were correct and I assumed they were.

Then I asked which were the commonly received Asiatic stations and you included JOIF 1413 in your list. I checked the SDR files I have from Finland (I cannot remember which DXer they came from) and I heard the "KBC" ID on 1413 and assumed this was Korea. However, I noticed there is no mention of a South Korean station on 1413 in MW List and you just confirmed this, so wondered if the "KBC" ID was something else, a Japanese ID for instance.

So here is a recording which puts the Finnish recording of 1413 (the first part of the recording) next to my recording of 972 kHz from 06-10-13 (the second half of the recording). I have repeated the ID part from both recordings for comparison.

https://app.box.com/s/3ni4rqo2vof1o1myhwgl

Hopefully we can get to the bottom of this. :O)

Yes, your 972 pips are 3+1 (KB*S* Korea), although the first one isn't heard well, while 1413 is 2+1 (KB*C *Japan).

Aha! So KBC and KBS are different stations. I assumed they were different vocal pronunciations. Very confusing. But there is obviously a KBC on 1413 which isn't listed.

Thanks again Mauno.

4085. Return of MF DX

Yahoo group: skywavesmw
Date: 2013-10-14 22:49:30 UTC
From: Satnipper
Topic: 4085 Message: 4085

The last few days have seen the return of MF NA DX in London. Friday morning 11 October saw some very good signal strengths from the New York regulars. My blog post http://www.swradiorelay.com/return-of-north-american-mf-dx/ shows how WINS/WBBR and WLIB were sounding at 0400 with their TOTH IDs.

Regards

Stuart

1660 0500 USA WWRU Radio Korea, Jersey City/Carlstadt NJ. 16-60 AM WWRU Jersey City ID 5539 km
1690 0500 USA WMLB Avondale Estates GA. V weak Voice Of The Arts ID in noise 6734 km

A late log from me from the 13th. The X band has been hopeless here this season but I managed to squeeze out two weak IDs.

I haven't been through the recent Asiatic DX but I might make a few notes later. There have been LOTS of CNR outlets but little in the way of vocals.

High latitude DX might have been dashed for a few days again as more geomagnetic disturbances take hold. Once again they seem to have been more intense than were forecast.

Good DX!

Not a lot to report but I had a nice signal from TWR Asia from Tajikistan at 1700 today:

https://app.box.com/s/gdcsuaf4x5oviyi9vow2

1521 CRI Urumqi was audible at 1400 but was quickly overtaken by Saudi Arabia a couple of hours later.

Good DX!

610 0300 CUB Radio Rebelde, three sites listed. Cuckoo ID behind US Fox Sports station **

** Personal first in Skegness

Conditions remain very poor to North America, but a new Cuban struggled its way though on 610. Three sites are listed: Bueycito with 10kW, Cienfuegos with 10kW and Guane with 1kW. This was competing with a presumed WIOD with its Fox Sports News programming.

Good DX!

Does anybody know if the 'planned' Zehlendorf transmitter is on the air now and relaying China Radio International? I heard the CRI interval signal on 603 kHz this afternoon at 1600. If Zehlendorg is not on the air I presume I must have received the 600kW Dongfang transmitter of CRI at 9494 km.

Thanks

John

John, I'm pretty sure you had the Dongfang tx. I haven't seen any reports about Zehlendorf being (already) active.
I'll try to check later in the afternoon. As I'm about 500 km from Zehlendorf, no chance to get it during daytime.
Impressed by your Asian logs!

73,
Günter

Thank you G?nter.

Below are recordings of two of the Asiatic stations I received yesterday. You can hear the CRI interval signal very weakly under BBC R4's Newcastle transmitter. Some unfortunate news stories in that clip too.

I posted the 891 clip to RealDX wondering if I had received Wor Sor Thor.R Thailand from Saraburi. Although the YL voice is unclear there was a suggestion this might be Ningxia RGD from Yinchuan. Fingers crossed on that. The Ningxia RGD web stream plays exactly the same four pips that appear on my recording, with the slightly longer space between the third and fourth pip. I think I can hear the ID too.

603 CRI, Dongfang HA 1700 18-10-13
https://app.box.com/s/rcc994vbsph3vhbjf0ed

891 unid 1600 18-10-13
https://app.box.com/s/81tz3ybe01ksmpbvyne8

At first, conditions didn't seem all that interesting to the far east yesterday afternoon. Urumqi 1521 was quite weak throughout, but those Chinese pips were coming in on several new frequencies. I will upload the Perseus files shortly.

Good DX!

John

4101. Asiatic Notes

Yahoo group: skywavesmw
Date: 2013-10-19 19:56:22 UTC
From: John Faulkner, Skegness
Topic: 4101 Message: 4101

I have been keeping notes on my Asiatic reception and believe I am hearing the following.

The Chinese time signals are easy, but that's where the guesswork has to stop. Japan, South Korea and Taiwan seem very similar and there seem to be some small variations depending on the individual station rather than on the country. Today's 1700 file has made me realise that I am possibly receiving a small number of Japanese stations, though nothing is 100%. Far from it in fact and my knowledge of Oriental languages is zero. Any help or comments will always be appreciated. I have much to learn.

Hopefully some beverage trips to the shores of The Wash soon too.

Good DX!

John

I'll enjoy going through that file later sometime - headache tonight grrrr - had to check 1269 though since I knew something would be lurking under DLF :-)
Glad to be of help with 1413 - yeah I was as surprised as you hahahaha.

Sorry Mauno. You are correct.

I just checked back through the messages and I see how I became confused. Too much clutter with previous messages in the thread - I missed one of your responses. I had also got it in my head that "KBS" sounded like "KBC" when spoken by a native Korean speaker.

It doesn't take much to confuse me these days and I am always rushing things.

Apologies.

John

738 1600 CHN Xinjiang RGD 738 Zonghe, ?r?mqi/Hutubi-XJTS631 (XJ) OM ID after time signal 6042 km **

864 1600 KOR HLKR KBS 1, Gangneung (gan) Presumed. Four pips on the hour, as 972 8759 km

1521 1800 CHN China Radio Int., ?r?mqi/Hutubi-SARFT654 (XJ) -60dB! Stronger than BBC R Lincolnshire! 6041 km

** Personal Skegness 'First'

Quite a different afternoon. I think JOIF was audible on 1413 again at 1500 but it was much weaker than yesterday. China was more in evidence this time. Urumqi 1521 back up in strength (and just a tad stronger my local than BBC Lincolnshire on 1368!) plus several other presumed/tentative outlets from Urumqi.

Three recordings of Xinjiang RGD below but I think only the third one contains the ID, which sounds like "Xinjiang Jenmin Guangbo Tientai" to me. Somebody might wish to correct my spelling.

Check your recordings John for the distorted signal from Dushanbe TJK on 927 - it was good here this afternoon (and quite clear) @ 1700 utc - with Japanese Pips on the hour (Carrying NHK in Persian)

Thanks Paul.

I have been monitoring 927 with interest. This evening I heard a presumed Japanese tone but it was way down in the noise so no chance of any vocals. There was also an oriental voice at the same time as an echoey Chinese time signal. It did sound like there were two lots of Chinese pips though and then I heard an echoey Chinese YL shortly afterwards. I see Urumqi and Harbin use 927 but the powers are not given in MWList. There are other higher powered Chinese transmitters on 927 anyway.

There wee so many of those fade-out Asiatic pips yesterday. If only it was possible to identify them all. Checking against the MWC all-time Asiatic logbook it seems fairly clear who they all 'might' be. I don't want to presume too much though.

Cheers

John

My best afternoon of Asiatic DX ever - and this includes my BOG trips just down the coast.

Japan is a new country here and one I have never heard domestically, other than on short wave. I think there were other Japanese signals in too but the vocals were never clear enough to be certain.

HLAZ 1566 was good at times. Long time no hear for this one and it's the first time I have heard it at home in Skegness.

Good DX!

Hi - my first post here.

Much improved conditions to North America overnight. A few MI/WI stations making it and east coasters still around at 0900. The latest this season. One daytimer heard at 2200 last night was 1520 WIZZ Greenfield MA. On the 19th WGHT Maugansville MD was heard at the same time.

1270 WMKT Charlevoix Mi
1280 WNAM Neenah WI
1320 WILS Lansing MI
1480 WGVU Kentwood MI
1600 WAAM Ann Arbor MI
all noted

Some east coasters were very strong

I've got a few snatches oth at 03, 04 and 05 of a station I'm sure is WNRP that I haven't received before, but no clear ID.

I've picked out Newsradio 1620 , Fox news radio and lots of Florida references, but not an ID. 04:00 is particularly strong.

Anybody pulled one out and able to point me to a time ?

Thanks

Simon

1017 2100 CHN China Radio Int./CNR 8, Changchun/SARFT523 (JL). CRI
interval signal.
https://app.box.com/s/ft21f8agfvotjj00ky7j 8011 km

1566 2100 KOR HLAZ FEBC, Jeju=Cheju (jej). Almost like a local!
Frequencies and ID just before the hour.
https://app.box.com/s/vmxqopnirwl5f1sqo9mv 9067 km.

More good conditions to the far east.

Very annoyingly, we suffered a power failure (we have several a week
here out in the sticks) a few seconds after 1700 which damaged the SDR
file. The file is still completely playable though (phew!) with the top
of the hour section intact, but Wavchopper is unable to chop down the
file because of the damage. So the remaining file is almost 600MB in
size and I would love to upload this to a file storage site but I cannot
find one which will allow such large files. If anybody knows of one
please let me know asap as I would really like to archive this file.

*The following might be worth further investigation: *

702 1700 25-10-13: Chinese time signal and ID at 15 seconds.
https://app.box.com/s/zhogg5nnbtmk8payrl8v

1359 1700 25-10-13: Chinese OM and music. Time signals. YL echoey ID at
55 seconds.
https://app.box.com/s/gg1zt50zi3a29igjccto

1413 JOIF Fukuoka 1655 25-10-13. I just want somebody to listen to the
recording and confirm this is really what I am hearing. I have no doubt
in my mind but I find I keep pinching myself about the reception of
Japan here.
https://app.box.com/s/8bq8vuaqcqlptuvwk8mz

Finally, these two are very weak. It has been suggested that 720 could
be North Korea and 729 Vietnam. I can just imagine I am hearing the

North Korean national anthem on 720. They are too weak for comfort however.

720 1700 25-01-13; Chinese time signal and possible v weak YL ID
https://app.box.com/s/cn0wby49pwgk55ig1r66

729 1700 25-10-13: Japanese time signal? Possible v weak YL ID?
https://app.box.com/s/67fvrda05tmm98q021bp

Some rough notes on other Asiatic DX. "Long pip" refers to those time signals used in the far east which could refer to South Korea, Taiwan, Japan, etc. and I include these just to show the amount of Asiatic DX which was coming in yesterday. Any audio was just that bit too weak for identification. I have cross-referenced them with the audio heard on Asiatic SDR files from Finland just to confirm I am on the right track with these.

540 Long pip
558 Chinese pips
567 V v weak long pip under R Rossi
594 Long pip
612 V v weak long pip
666 Long pip
702 Chinese pips and ID
711 Long pip
720 Chinese pips x 2
729 Long pip
747 Indian music - clear under Holland // 783
774 Oriental music, under Leeds
828 Long pip
855 Chinese pips
963 Chinese pips
981 Chinese pips
990 Chinese pips
1044 Chinese pips x2
1071 V v weak Long pip
1098 Chinese pips
1170 V v weak Long pip
1224 V v weak long pip
1287 V weak Japanese pip
1305 Chinese pips
1341 Chinese under R Ulster
1377 Chinese pips
1386 V weak long pip
1404 Chinese pips
1413 Chinese pips under Fukouka
1467 TWR Kyrgyzstan
1494 Chinese pips
1539 Chinese pips
1557 RTI, Kouhu
1593 Chinese time signal

Well, the conditions haven't blown out yet so hopefully there will be more Asiatic DX along this afternoon.

Good DX!

From: mattdx538
Topic: 4123 Message: 4123

Hi all, turned on my little Sangean ATS 909 around 1am last night to hear 1510 Boston there right away, just by using the radio, no loop, I had to tune to 1508 to remove the whine. It was fading in and out but definitely my first confirmed trans atlantic Dx!

Also around 2:30 am I heard something on 1010 but could not ID due to lots of splatter from Groot Nieuws Radio 1008.

Anyone know what this one could have been?

Hope for more with the clocks going back tonight!

Cheers.

One of two probabilities - WINS New York or CFRB Toronto.

Paul

As Paul says, it has to be one of the two - WINS or CFRB. 1010 is difficult here due to that overpowering Dutch station on 1008.

Great to see your logs here btw Paul. Glad to read that you are all hearing something from the North American path - which remains almost closed on the east coast.

Good DX!

From: simbeav
Topic: 4128 Message: 4128

I received a clear ID on 23rd October at 02:00 for "Radio Iniciativa Mil Sesenta" on 1060.

MWLIST has WCGB rock radio Network and in the remarks ex Iniciativa Mil 60

Does this mean it is no longer Iniciativa Mil 60 or am I misreading it.

The ID I have is very clear.

Anybody know anything about this station ? Are they still WCGB ? Are they using an old ID ? It's a first for me, anyway.

Simon

WRTH lists four hours' local programming for them on weekdays, maybe
they add the ID there every now and then?

According to MWLIST's sources, they were not using the "Iniciativa Mil 60" anymore, you may however still find older references on the web.

From http://en.wikipedia.org/wiki/The_Rock_Radio_Network:
"Most of the programming today on WCGB originates from The Rock's main studios in San Juan. However, WCGB retains a three-hour bloc of its own programming every weekday morning between the hours of 9-12. These programs are Spanish. "
http://rockradionetwork.org/program-guide-wcgb/
But your log is earlier, at 22.00 PTR time. So, this should be the correct program guide for Wed 23 Oct:
http://rockradionetwork.org/program-guide-mf/
And indeed it has Spanish at 10 pm PTR time.
This the web stream: http://rockradionetwork.org/listen-online/

Even more great conditions to the far east!

Thanks to the guys at Real DX for listening to my recordings I have
bagged a few goodies this afternoon. For a while now I have been
wondering what the little top of the hour jingle ID is I sometimes hear
on 891. When I heard the same jingle today on 1017 and 1296 I had to do
some further investigation. After posting my recording of the jingle,
Mika and Mauno replied to confirm the jingle belonged to the BCC in Taiwan.

So I found a web stream of the BCC News Network and recorded their top of the hour. This was what I heard: https://app.box.com/s/audoygm2f8rdqy2lzk8z Note that cute little jingle. It penetrates the noise well in the same way a weak CW signal would. Now get your headphones on (you may need them) and listen to my recordings of the same jingle on 891, 1017 and 1296 respectively: https://app.box.com/s/2nsg32mkbluy8qk4yhsc Tricky, but clearly(ish ;O) the same jingle. Luckily, there is only one BCC Network station on each of the three frequencies. 819 and 1296 are the same site too.

Going back to the power interruptions which affected my 1700 file from the 25th, I discovered that Rapidshare still accept large file size uploads, which is a good job as this one is over a GB in size! This is the link - http://rapidshare.com/share/12BCF0A09A9E01C795EF45EA2676AEEB if anybody wants to listen to the file.

Finally, does anybody know where the TWR site is on 1287? I don't see this listed.

Good DX!

A welcome return to good North American conditions (at last!) with some mid-western activity. 850 KOA was also tentatively heard at 0400 when 1510 KCKK was audible. In fact there were many stations which got away due to being splattered over or just not quite strong enough to push through the pile-ups. 1230 had a few bits and pieces of audio, including tentative IDs. I could hear ABC News and USA Radio News on 1230 around 0500 and 0600 but any presenter's vocals were obscured by the co-channel mess.

Other curiosities were USA Radio News and CBS News, heard on 1300, as was an echoey of USA Radio News on 1360, both around 0600, indicating two stations.

Recordings:

1520 KOKC Oklahoma City OK 0700 28-10-13:

Where is the best place to post recordings of Oriental DX?

Real DX is excellent for most languages, and a couple of Japanese speaking members there have helped enormously with my Japanese signals, but But I am looking for somebody who speaks or understands Chinese languages who might be able to help with my recordings.

A couple of interesting Oriental signals came through today and yesterday and naturally I have been trying to discover their identity. I believe the first one is Chinese, but I am less certain about the language spoken in the second one.

Firstly, this is my 1287 from yesterday:
https://app.box.com/s/bdvb4pshgfayv377c0j8

Today I have a possible Chinese station talking over the hour at 1600 on 738: https://app.box.com/s/jp4nffm31egobgpemvu7

I think these are different stations to the ones usually heard on these frequencies as there were no standard Chinese time signals which always seem to be present, unless they simply didn't have them though it would seem odd if they didn't. 738 usually has Xinjiang RGD from Urumqi here. 1287 is just a mystery and I have never heard this one here before. Both stations continued over the top of the hour without stopping. Hopefully there is something in the 1287 station as I think I hear a promo or a commercial.

Asiatic conditions never cease to amaze me this season. I have been hearing so much more at home on my 340 degree flag than I ever heard last season with my 300m BOG antenna and conditions never seem to be the same twice.

Fingers crossed.

John

4138. No Asian action here

Yahoo group: skywavesmw

From: patrice privat
Topic: 4138 Message: 4138

Hi

I keep trying to get beyond Iran here with my Icom R75 and an indoor loop ALA1530 but no luck so far.

Here's a recording of several inter-lapping beeps at 18:00 utc on 981 khz, there seems to be only euro stations there but can the experts have a listen and tell me if something more exotic is lurking behind ?

Many thanks

Pat

Hello Pat.

That's a tricky one. I hear Arabic in your recording and possibly French. It's only a guess but I suspect Chaine 2, Ouled Fayet is is one of the stations. Maybe the other is Iran? I do not recognise the time signals on your recording but there are no Chinese time time pips in there.

I checked my recording at 1800 tonight and heard what I presume to be Radio Star Country with the "Good News Broadcasting Association" show, which fits their schedule. I am surprised to hear this since it is only listed with 1kW (really?). I also thought I heard a "Radio Biskra" ID, which would probably be Algeria. I guess Chaine 2 must relay Radio Biskra: https://app.box.com/s/txke563gv44wxwqplg40

I have to go back to 1600 to hear Chinese time pips:
https://app.box.com/s/wo7py4knretnx2eg86wa

Hope this helps.

Interesting to compare Pat.

Good DX!

John

I think they are ENRS Cha?ne 2 in Tamazight (IDing as "Radio Isnath" acc. to WRTH) and RAI Radio Trst in Slovenian, although I don't hear a clear ID for either of them.

Thank You

Impossible to get anything from here in Beauvais apart from Saudi Arabia on this channel (1521 khz).
One year ago in Oslo I had Urumqi loud and clear on my ultralight Tecsun PL-380, I usually have them dimly from here in France a few days in December, not before.
Vienna Globaltuners yielded nothing on 1287, 981 or 1044 at 1600 utc.
Will try again if the receiver is not tuned by someone else tomorrow at 1700 utc.
There are receivers in Scandinavia but only for VHF I think.

Thanks

I tried those Perseus stuff but they don't work with my computers,
I don't know if it's because I should download a software or what, anyway even with updating my java, my adobe, you name it, all I get is a blankpage !

anyway I had Urumqi from home today at 1600 utc with the ultralight Tecsun PL380, I aimed at Spain (SW) to null out the Saudis (SE) and the Spaniards had kindly a severe fading at the top of the hour, so CRI came real good for a couple of minutes, beeps, interval signal and brass tune ! I'm hot on the Silk Road now.

I have found an old recording of Chinese domestic on my hard drive dating from dec 2008, must have been Tianjin though it's listed 20 kw.

I'm bound to keep trying as I'm stubborn as a DX mule.

Hyvää Paivää, dear friend

Yeah I got a map showing indeed servers like the one in FINLAND that I wish to try but nothing happens when I click on it, I tried the IP address in my browser but it goes nowhere ; as to the other technical page, explaining how the thing works, it is far beyond my understanding and i don't want to risk damaging my web connection by a mistaken procedure.

Guess this SDR thing is too far fetched for me !

The "other" SDR sites work well but apart from the the one in HOLLAND (university of Twenthe) they are restricted to ham bands, so...

no problem with TWENTHE; starts automatically, the link cuts sometimes when the waterfall is on, but on the whole it is efficient.

From: Günter Lorenz
Topic: 4143 Message: 4155

To use one of the many Perseus rx on the net, you need to install Perseus software from http://www.microtelecom.it, and configure your internet router as per http://www.montefusco.com/perseuscs/ . The software alone will run only for a limited period, unless you actually own a Perseus receiver (which is not a bad idea).
Unlike Twenthe rx, a remote Perseus can be used only by one user at a time.

Betreff: RE: [skywavesmw] Re: China but from Austria

Hi all,

Can you use others Perseus receivers on the web, like the University of Twenthe receiver? if so, how?

No China for me, 1521 is always occupied by the powerhouse of Saudi Arabia :(

Cheers,

Matt.

4156. Re: AW: [skywavesmw] Re: China but from Austria

From: Mauno Ritola
Topic: 4143 Message: 4156

And here are short instructions for sdrspace.com rx's. It is a bit simpler than Perseus, because no port forwarding is needed, you just need the open the port in software firewall. Also the software is free and unlimited:

* Download V1.5 from
http://www.sdr-radio.com/Download/tabid/178/language/en-US/Default.aspx
and install it.
* From /Input Source/ on the ribbon bar select /Remote (Via Network),/
* In the /Remote Connection/ window select /Browse Web/,
* Select an entry from the list of servers, return to the Remote
Connection window and press /Connect/!"
So remote listening happens with the "Console" prgr. You need to
have port 7900 open. You need also
to click "Start" in the "Soundcard" section to start the rx. If
there is no audio, check that you have the correct sound card
chosen at AF Output->Playback Device.
For example my rx is: "SWL/not, but MW DXer". Username: Guest and
password:
FortKnox (notice capital K). Just double click the line in which it
is mentioned, when it is free (shown with green V).

4157. Loggings: 2/11/2013 (First international station) - Tasmania, Australia

Yahoo group: skywavesmw
Date: 2013-11-03 01:47:42 UTC
From: Paul
Topic: 4157 Message: 4157

Last night was my first time using my new Tecsun PL-606 ultra light radio and AN-200 loop antenna, the results of this combination were simply amazing. I was expecting some good results but nothing like what I found once I started tuning the band with it.

After getting to grip with how the PL-606 works and checking some local frequencies I started searching the band. The low end of the band was sounding fairly normal and all the frequencies I normally hear were coming in loud and clear, it was not until I hit around 945kHz that I started to log some new stations, this continued until the top of the band. In the end I logged 12 new Australian stations, not a bad effort for an hour.

Once I reached the top of the band I started working my way back down when on 1386kHz I could hear a weak signal, this frequency is not used in Australian at all and it was not bleed over from any other frequency, the programming also didn't sound like anything I had ever heard. I checked my NZ medium wave frequency list and found a station name for this frequency. At this point I moved in to a different room and I was able to get clear enough audio to be able to understand what was being said. A quick check of their webpage with an online stream and I can confirm my first international DX catch on medium wave :)

Overall it was a very enjoyable couple of hours and my first international DX catch was icing on the cake. My Tecsun PL-606 and loop aerial really worked well and I can see myself logging many more stations with them.

New Stations:
837 - 7XS - Queenstown - TAS - Commercial - 500
945 - 4HI - Dysart - QLD - Commercial - 1000
972 - 5PB - Adelaide - SA - National - 2000
999 - 2NB - Broken Hill - NSW - National - 2000
999 - 2ST - Nowra - NSW - Commercial - 5000
1098 - 4LG - Longreach - QLD - Commercial - 2000
1134 - 2AD - Armidale - NSW - Commercial - 2000
1161 - 5PA - Naracoorte - SA - National - 10000
1206 - 2GF - Grafton - NSW - Commercial - 5000
1359 - Mildura/Sunraysia - VIC - HPON - 200
1386 - Radio Tarana (Indian) - AUCKLAND - I-NZ - Commercial - 1200
1476 - Penrith - NSW - HPON - 180
1584 - 2EC - Narooma - NSW - Commercial - 200

From: Fast Logger
Topic: 4158 Message: 4158

All right folks, downloaded the programme, ran it, went as far as the (beautiful) console and got connected to a site in Norway, no audio yet but since I rushed in the procedure, I might have done something wrong.

I'm expecting guests this sunday to celebrate my son's 12TH birthday, so I won't be in the shack until late tonight, when I'm going to focus more on this, I expect it will work out fine, even on my Windows XP machine.

It can't be long now till I become the Gengis Khan of Asian MW !

Thanks guy, I'll keep you posted.

Pat

Fantastic stuff Paul.

I can see that the bug has bitten. I'm sure you'll be adding stations and countries from all over the place in no time. I have come to love ultralighting, more so on the ham bands using low power and more in the way of stealth antennas, wire dipoles, etc. It's amazing what can be received and worked. Looking forward to reading more logs.

Good DX!

John

From: pedrozimpala2
Topic: 4160 Message: 4160

Hi

Sorry for taxing your patience again.
Well, I'm getting audio from most green cross (available) servers in Europe but no signal where there should be : 5450 khz usb should be RAF Volmet but no usb voice anywhee ; Germany has no AM on 972 or 1017 khz whereas my "real" radio gets it from here, the lower 7 mhz band in LSB has not a single ham, I changed modes, bandwiths, many things but it stays the same, just white noise.

4161. my settings in this screengrab

4162. Easy NA DX tips please

Yahoo group: skywavesmw
Date: 2013-11-03 21:01:13 UTC
From: Richard
Topic: 4162 Message: 4162

Hi all

Just returned to some MW DXing after a long lay off. I enjoyed listening to VOCM 590 kHz last night and wondered if I might have some tips for some "easy" North American catches for the UK please.

(I date back to the days of CJON and WABC when they were both music stations)

I use a IC703 (my ham rig) which is surprisingly good for MW because I can switch between USB and LSB and it has DSP with auto notch filter, and variable IF bandwidth, all of which come in very useful.

Using a 20" box loop for now but I read somewhere of a single loop mounted on the side of the house that would be good as I could install this orientated east-west.

So far the tactic has been to check every 10kHz channel listening for the carriers which seem present on most of them but they are very weak, around 2200 - 0000z.

I will try around UK dawn which is currently around 0700z.

Thanks guys

Much depends on your local "pests", but I would recommend looking for
(in descending frequency order)

1600 WUNR (Spanish language)
1560 WQEW
1540 WDCD/CHIN/KXEL
1520 WWZN
1510 WUFC
1400 CBG
1390 WEGP
1310 CIWW
1200 CFGO
1190 WLIB
1130 WBBR
1010 WINS/
950 CKNB
800 VOWR
750 CBGY
600 CBNA

Paul

4166. Dutch radio & TV silent now

Yahoo group: skywavesmw
Date: 2013-11-03 22:19:47 UTC
From: Jurgen Bartels
Topic: 4166 Message: 4166

Dutch public TV & radio is silent now on all satellite channels incl BVN and webstreams. MW 747 is off air also
a few minutes ago Ned-1's sport program sat in the dark with just a few desktop lamps on, reporting Hilversum has a power failure. Aparently that is now 100%

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el
TV: Winradio G305 / Fly2000 + video noise filter & variable IF BW
FM: Downconverter + Perseus + Speclab as WFM demod.
MW: 30 x 4m EWE 320° with JB-terminator, Winradio & Perseus
http://zeiterfassung.3sdesign.de/station_list.htm
http://dx.3sdesign.de/tv_offset_list.htm

Thanks for that list Paul.

I was surprised to discover quite a few "clear" channels from 1470 and up,over here in Eastern England. This reflects the economic situation in europe I guess.

I had an unident on 1510 kHz OM with sports talk mentioning Miami and 1390 kHz again with sports talk mentioning the Buffalo Bills football team. Also noted a Spanish football commentary on 1050 kHz.

Not sure how the Icom would cope with a beverage but I like to go portable with amateur radio and so will give it a try in the next few weeks.

Do you think around UK winter dawn is better than midnight for the more casual MW DXer?

Looks like an interesting Winter coming up.

Thanks again
Richard

The streams were the first to come back, then MW, sat-radio came later, TV still shows flashes or a static image. Could not check FM

There was a power outage in media park Hilversum.

Radio-1 is meant to be the station in case of mergencies, now even that fell silent. What a blunder.

Now TV started also

Hard to say what the best time is. Midnight can generate some very good signals. I have found sunrise a bit disappointing recently. Beyond sunrise is a good for more distant DX as EU fades and East Coast North America starts to fade .

Another frequency for easy DX is 1610 Caribbean Beacon, Anguilla with religion - but you'll never hear an id!

1050 will be WEPN.

These three were recorded at midnight last night - 1600 WUNR followed by 1130 WBBR and then 1010 CFRB.

603 1500 CHN China Radio International, Dongfang (HA) CRI Interval signal. V weak 9494 km
711 1500 TWN BCC Country Network, Tainan (TN) BCC Jingle on the hour. V weak 9754 km **
801 1500 TWN Han Sheng GD Kuanghua zhi Sheng, Kuanyin (TY) Haunting flute interval signal and ID. As 981. V weak 9620 km
846 1500 TWN Han Sheng GD Kuanghua zhi Sheng, Kuanyin (TY) Haunting flute interval signal and ID. As 801 and 981. V weak 9620 km **
891 1500 TWN BCC Local Tainan, Tainan (TN) Clearest yet. Top of the hour jingle. YL audio. V weak 9754 km
981 1500 TWN Han Sheng GD Kuanghua zhi Sheng, Hsinfeng (HC) Haunting flute interval signal and ID. As 801 V weak 9626 km
1287 1500 TWN Han Sheng Kuangpo Tientai, Taichung (TCS) Haunting flute music, as 801, etc. Very weak but clear. V weak 9686 km **
1323 1500 CHN China Radio International, ?r?mqi (XJ) Presume Urumqi. English ID. Weak 6041 km
1377 1500 CHN CNR 1, Xingyang (HE) Pips and Beijing ID, equal levels with Lille. Fair 8307 km
738 1531 CHN Xinjiang RGD 738 Zonghe, ?r?mqi (XJ) Shouting YL, as web stream. Weak 6042 km
711 1644 TWN Han Sheng GD Kuanghua zhi Sheng, Hsinfeng (HC) Haunting flute music, as others, mixing BCC jingle. Vweak 9626 km

** Personal Skegness 'First'

One which got away during the afternoon: Around 1545 on 738 kHz I heard Chinese YL speech mixing equal levels with an Arabic station. There was another station in the background playing what sounded like Chinese music. The Chinese music 'seemed' to be the same as that heard on the Taiwan Ch? Yuyeh Kuangpo Tientai webstream which I followed for about 15 minutes, but it was too weak to be certain. The dominant Chinese YL was clearly the same as the Xinjiang RGD Uighur webstream which has been a regular visitor.

Good DX!

When I tuned into MW at 1945 utc, 590, 800 and 1400 all had fair audio from Canada. 1280 CFMB Montreal, in Italian, was noted at 2100 utc. This is an odd station since here it is only audible in the relatively early evening at this time of year - yet it is 50kW day/night.

I thought I would back up this file as there may be one or two interesting things happening on it. There was a decent signal from Han Sheng on 711 at least so I expect there might be a few other things happening on it. I haven't listened properly due to lack of time.

From: pedrozimpala2
Topic: 4178 Message: 4178

Hi

Thanks to your gentle tips and advice, I have now become tolerably familiar with the console, not only on Mauno's excellent server which got me to Korea, Taiwan and Afghanistan (my preceding mail) but also on other European or American servers.
Last night, I was on a Polish platform (SP7LFB)and heard the following :

1557 Hindu music mix station, no ID but I suspect Radio Asia, Ras Al Khaimah, UAE, inaudible from my QTH because of France Bleue.

1134 Arabic language station, under Croatia, could be Radio Kuwait.

More from me, as I try new things.

Maybe 1611 kHz is a Greek station.
1098 kHz at that time is actually RFA via Kouhu.

Strange conditions today: JOIF 1413 kHz audible already at 0900 here!

Very interesting. Thanks for the tip Mauno.

I noticed Urumqi already at fair levels here at 1300. That is the earliest I have ever heard them.

Hoping for good things in the next few hours.

Yesterday afternoon I had South Korea on 972 and 1134, mixing equal levels with the Europeans, but little else, apart from the usual Chinese suspects. On the 4th I had good signals from Han Sheng 711 but, again, little else. Japanese time signals were just getting through on 1386 and 1413 but not strong enough for audio. Admittedly I may have missed lots as time is scarce at the moment. I am hoping to spend more time listening this afternoon.

Good DX!

Yes, Mauno, I guess you're right about that, but the 1611 khz is definitely Afghan and the language sounds like Pachto, and the music is typical Afghan music.
I have sent my 1242 khz clip to Voice of Vietnam for authentification, I find it extraordinary to get Vietnam from Finland on MW ! That's a great hobby.
From your site I received Iran on 1116 and 1584 khz in Farsi (recorded it) ; that should be Ardekan and Maku.

Happy DX Mauno

4187. UltraLight MediumWave DataBase

Yahoo group: skywavesmw
Date: 2013-11-07 02:11:34 UTC
From: Paul
Topic: 4187 Message: 4187

Hi all,

Following on from a couple of my posts looking for ways in which people store the information on the stations they have heard active I set about creating my own database. After trying a few different products I decided on using Microsoft Access 2007, below is some information on it.

This page (http://ulmwdx.blogspot.com.au/p/ulmwdb-ultralight-mediumwave.html) is for my UltraLight MediumWave DataBase (ULMWDB) which I have designed using Microsoft Access 2007. If you do not own Access 2007 you can download the Access 2007 runtime environment which will allow you to use this database.

As I am still in the early stages of designing this any and all feedback and suggestions are welcome. Please see a screen capture below of the main data entry screen.

http://2.bp.blogspot.com/-_DkosL5UECU/Unr1hSyq0II/AAAAAAAACXY/tdk0q1mHoEU/s1600/ULMWDB_07112013.JPG

Regards
Paul

4188. Re: [skywavesmw] Skegness Log: 06-11-13

Yahoo group: skywavesmw

From: John Faulkner, Skegness
Topic: 4185 Message: 4188

Thanks Paul.

The Asiatic stuff is fascinating - and bewildering at the same time. The last few weeks has shown that I don't know my Japanese from my Korean or Farsi, but then why would I?

I always feel guilty when I ask other's to do my DXing for me, but it's often the only way I'll be able to make any sense of what I am hearing. Luckily, those time signals and high-pitched jingles show that there is something which needs closer inspection.

Here are yesterday's 1500 and 1600 files ;O)

06-11-13 1500:
http://www.mediafire.com/download/f62m4calbj22dc5/2013-11-06_1500_(JF_Skegness).zip
06-11-13 1600:
http://www.mediafire.com/download/xhax5qj1jagv9o5/2013-11-06_1600_(JF_Skegness).zip

I don't think much is happening on the 1500 file, but HLAM 1386 is just about there so I could be wrong. 1600 was more interesting for me. I have only had time to whiz through the recordings so I could be missing something interesting. As usual lately there is hardly any time to devote to these recordings so I am uploading them so I can check them in the future when there is a lull in conditions.

Cheers

John

Hi Paul.

I don't know if you have used MW List http://www.mwlist.org/ul_login.php?sprache=en It's the same as FM List but for MW and SW.

Even if you want to create your own database in another programme I recommend the MW List as a good starting point since you can easily export all your loggings for Access, Excel, etc.

My loggings start out on either FM List or AM List, then I export them for here, then that gets pasted into my blog. It's so simple. I also paste these into tables into Google Docs as I can incorporate the logbooks into my website too. I can edit the logbooks from within the website this way. I can go through this with you if you need help setting it up. I do all this to ensure I have permanent records of what I have heard because I have lost so many DX documents over the years due to hardware and server failure at the host end.

That's me anyway. It can be a little frustrating keeping everything up-to-date when logs are on the large side, as with E skip for instance, but it means I have backups of backups and the procedures involved become second nature and usually very quick to implement.

John

4190. 1390 - Identification help

Yahoo group: skywavesmw
Date: 2013-11-07 11:35:46 UTC
From: BEAVAN SIMON
Topic: 4190 Message: 4190

Hello all,

Unfortunately I'm falling into my usual trap of getting well behind in my reveiwing of overnight recordings. Lack of time and disipline leaves me sometimes weeks behind :-(

Anyway - I picked this at 23:59 on 29/10 on 1390. I've only ever got WEGP on this channel before, but this was battling with WEGP and came up just on the hour with a fairly clear ID.

https://app.box.com/s/y9exzjfc10u6y82xnlz0

The problem is I start hearing what I want to when I hear an ID over and over. Just wondering if anybody else would have aminute to listen and tell me what they hear ?

Thanks

Simon

4191. Another Joensuu session

Yahoo group: skywavesmw
Date: 2013-11-07 17:02:59 UTC
From: pedrozimpala2
Topic: 4191 Message: 4191

Hi Friends,

Finland and Karelia being Europe's region closest to the Far East, I once again used Mauno Ritola's Medium Waves receiver in Joensuu, Eastern Finland by remote control from my computer by SDR console technology.

From the start at 1315 hours GMT, I had the feeling that Far Eastern stations were more powerful than European stations...

1539 khz was loud and clear in Mandarin ; I recorded them around the time signal at 1330 GMT, I don't speak Mandrin but I'm confident it is the 1st programme (CNR1), transmitted by the Chinese National Radio from a crowd of different mainland locations.You ca hear my clip at :

https://app.box.com/s/tu9qucldnuglor7h5m01

1575 khz was Voice of America from Ban Phachi, Thailand ; ther's a VOA jingle at 1' 32" after the clip starts. According to my old schedule, their Thailand facility uses Khmer during that 1330-1400 GMT segment, check it out at :

https://app.box.com/s/1cbn8gl2zgjp23sqprfd

1476 khz is a bit of a mystery, but I would bet for Lamphun (Chiangmai) in Thailand ; there was lots of terrible pop songs before this here excerp, check it out but I think the language is Thai.

https://app.box.com/s/87ezqvgn4kkotcdq94gu

963 khz is non stop Kazakh music, I first thought it was Kazakhstan's Radio but Internet CNR-8, China's Kazakh service from various Sin-Kiang transmitters. Check it out at :

https://app.box.com/s/kop5275izf4t8lxs07zr

Thanks for your tips and advice.

That's so difficult Simon. I hear an FM frequency at the beginning, 105? (they've dropped the "point"). Unfortunately the W call is so muffled I cannot determine the rest of the letters.

What is needed is some detective work to see who has 1390 and 105.?. The approximate FM frequency makes it difficult. If that is a reference to "newstime" at 11 seconds it could narrow it down a bit if this station has a news format.

Topaz lists the following with News:

1390 WFIW FAIRFIELD IL
1390 WPLM PLYMOUTH MA
1390 WRSC STATE COLLEGE PA
1390 WTJS JACKSON TN
1390 WZHF ARLINGTON VA

and Talk:

1390 KGNU DENVER CO
1390 WFHT AVON PARK FL
1390 WAJD GAINESVILLE FL
1390 WFIW FAIRFIELD IL
1390 WEGP PRESQUE ISLE ME
1390 WLCM HOLT MI
1390 KJPW WAYNESVILLE MO
1390 KENN FARMINGTON NM
1390 WFBL SYRACUSE NY
1390 KRRZ MINOT ND
1390 WBLL BELLEFONTAINE OH
1390 WRSC STATE COLLEGE PA
1390 WISA ISABELA PR
1390 WYXI ATHENS TN
1390 WTJS JACKSON TN
1390 WZHF ARLINGTON VA

The call does not sound like any of these to me so I wondered if it could even be a relay?

Sorry, that's the best I can do.

It sounds like you used noise reduction on this recording. If you could re-send a version without this it sometimes helps.

were more powerful than European stations...

Yes, greyline hasn't yet reached Europe properly and Asia propagates via the twilight zone. But it hasn't always been like that: MW band was rather crowded also here in daytime still 10-20 years ago. But now, with all Russian megapowers etc. closed, the MW band has never been better here, so enjoy!

1476 kHz is R. Thailand, but it carries mostly hill tribe languages, your clip sounds quite a bit like Burmese.

Hi John,

Thanks for the reply. I had not seen MW List so I will check that out as it sounds like it might be something I could find useful.

I like to keep a local copy of my own logs myself, as I don't trust external providers having had some bad experiences in the past. I have it backed up in 4 separate locations across a wide geographical area.

Thanks for listening John.

I am hearing WLAN, but it is probably just wishful thinking as that seems to be a low power station and I haven't seen any reports of it. Also if you are right about the FM announcement, that doesn't fit.

This is part of my problem - spending too long chasing Ids and not moving on!

Thanks anyway

Simon

Here's what I am hearing:

at 00:01 I hear "1320 AM" which must actually be "1390 am"
at 00:04-00:03 I hear WDAU, WEAU, WCAU, followed by a number "13"? "18"?
WBAU, WDAU, WTAU, WVAU don't exist, WEAU is a Eau Claire Wisconson TV station, WCAU is a Philadelphia TV station.

WLAN 1390 is in Lancaster, PA and is relatively near Philadelphia but not near enough that I think they would be broadcasting WCAU news.

WEAU TV is interestingly enough channel 13 in Eau Claire, WI. Maybe I hear "WEAU...13"?

WRIG 1390 is the closesst 1390 station to Eau Claire, WI

WHat was the format of the station? News? Oldies? Sports? That could help on the ID.

4199. Joensuu Session / Friday

Yahoo group: skywavesmw
Date: 2013-11-09 08:43:26 UTC
From: pedrozimpala2
Topic: 4199 Message: 4199

Hi

Another Joensuu session friday around 1630 utc :

891 khz is interesting : it starts with Chinese language, probably Ningxia RGD Yinchuan but Radio Thailand, Saraburi takes over with a programme about Fats Domino and Chubby Checker..

https://app.box.com/s/btrievwypyp5fumjiv16

918 khz, there Radio Rossii with a classical music programme ("Musika Zabatyé") including an interview of Estonian Chef Mariis Janssons, and all the time underneath there's flute music which could be AIR Suratgarh : note Moscow's Vnukovo Airport with its morse beacon SX on 914 khz.

https://app.box.com/s/uinz08301p0nl7o0yak9

666 khz Iran with a beautiful dramatic piece of music (I wish I that on record).

https://app.box.com/s/wugwdsau8hsrd3i6ptlt

Thank you all for you help (both) Johns and Ken. Ken you are of course right. As soon as I read your email and went back to the original recording WLCM and Holt Lansing are both obvious.

Common in Scotland, but not in my part of extremely noisy Cardiff (electrical interference wise) and a new one for me !

Thanks again

Simon

Subject: [ultralightdx] A few ultralight loggings from Arctic Norway

Well, since I did the modification of my PL-380 and transplanted the 7.5" loopstick on it, I've wanted to check what was possible to hear on it "barefoot" (i.e. with the 7.5" loopstick only). Here's a short log of what I've received, when listening occasionaly. Propagation has not been THAT good up here in Arctic Norway, and it's horrible today. Yesterday measured a K-index of 4 followed by an A-index of 17 today. That literally "pulls the plug out" of the MW-band for us living north of the arctic cirkle.

But anyway, the modified PL-380 is a VERY capable little radio and when band conditions allows, it's possible to do some very interesting loggings on it, even barefoot.

EUROPE:
738 3.11 1359 WRN, Kurkino (Moscow).
765 31.10 1237 Radio Rossii Kareliya, regional progr. for Karelia republic.
828 31.10 1858 Radiogazeta Slovo, St. Petersburg.
846 31.10 1318 Radio Podmoskovye, Noginsk, Russia. Independent broadcaster.
909 31.10 1609 Radio Cluj, Romania. Local broadcaster.
918 31.10 1306 GTRK "Pomorye", Archangelsk, Russia. Regional programming.
1035 31.10 1553 Radio Eli, Tartu, Estonia.
1053 2.11 1157 Radio Mariya, St. Petersburg, Independent broadcaster.
1170 31.10 2105 Radio Capodistria, Trieste, Slovenia. Regional programming.
1440 31.10 1345 Radio Zvezda, St. Petersburg, Independent broadcaster,
1485 31.10 1540 Radio Merkurs, Riga, Latvia. Independent broadcaster.
1530 5.11 1538 Radio Constanta, Mahmoudia, Romania. Local programming.
1593 31.10 1703 Antena Sibiului, Subiu, Romania. Local programming.
1602 2.11 1754 Scandinavian Weekend Radio, Virrat, Finland. Independent "hobby" broadcaster.
1602 4.11 2050 Radio Vitória, Vitória, Spain (Baskia).

AFRICA:
1530 31.10 1955 VoA Africa, Sao Tomé e Principe.
1550 4.11 2130 Radio Nac. de la RASD, Ribouni, Algeria.
1566 4.11 2120 TWR Africa, Parakou, Benin.

ASIA:
693 1.11 1615 Bangladesh Betar, Dhaka.

702	5.11	1450	TRT1, Istanbul, Turkey.
738	2.11	1649	BEL2 Taiwan Yuiyeh, Penghu.
783	31.10	1930	Syrian Radio 1, Tartus,
801	3.11	1700	AIR Jabalpur, India.
882	3.11	1545	TWR Puttalam, Sri Lanka.
882	4.11	1545	BSKSA Qu'ran Programme, Damman, Saudi Arabia.
963	9.11	2159	Cyprus BC, Nicosia, Cyprus.
972	6.11	1758	Orzu relay station, Tajikistan.
1098	4.11	2206	BCC, Kauhu, Taiwan.
1107	31.10	1753	RTA, Kabul, Afghanistan.
1107	2.11	1556	Xinjiang PBS, Ürumqi. Kazakh programme.
1071	31.10	1403	AIR Rajkot, India.
1071	31.10	1621	Radio Al-Nour, Tartus, Syria. Lebanese station located in Syria.
1260	2.11	1404	Radio Pakistan, Peshawar.
1359	2.11	1417	CNR1 // 1377.
1323	2.11	1323	IRIB Regional, Jolfa, Iran. Regional progr. for East-Azerbaijan.
1341	3.11	1510	Radio Pakistan, Bahawalpur, Punjab.
1377	31.10	1502	IRIB Radio Iran. No regional programme at this time.
1377	2.11	1320	CNR1,
1422	2.11	1340	CNR1, Xinjiang.
1449	31.10	1340	VOIRI, Bandar-el-Torkaman, Iran.
1494	2.11	1332	Xinjiang PBS, Chinese programming.
1557	8.11	1442	Family Radio, Kauhu, Taiwan.
1575	8.11	1347	VoA Ayutthaya, Thailand.
1584	4.11	2030	IRIB Regional, Semnan, Iran. With local ID!

Still waiting for the first North American station received on my PL-380, but I'm pretty cinvinced that it will be either 680-KBRW, Barrow AK or 1000-KOMO, Seattle WA. Both of them has been received with good signals on my Eton E1/Quantum loop combo.

4206. 3 new countries + ONE mystery

Yahoo group: skywavesmw
Date: 2013-11-10 18:22:49 UTC
From: pedrozimpala2
Topic: 4206 Message: 4206

Hi All;

Another Joensuu, Finland session on Mauno's SDR site around 1530 utc and onwards :

1341 and 1170 khz gave Radio Pakistan in English with news :
Bahawalpur 1341 khz

https://app.box.com/s/ruwwt9rg9us6gagop6kq

Peshawar 1170 khz

https://app.box.com/s/s5icsp60lm3i5m2lfkh7

882 khz was TWR Sri Lanka (there was a TWR identification just before my recording started)

https://app.box.com/s/5bnqc8nzry6f95kl7q7p

729 khz, total mystery, girl with South East Asian accent speaking some mixed English :

https://app.box.com/s/6f4fyetlabmlwkp88jk7

666 khz can only be AIR Delhi with Sitar :

https://app.box.com/s/wugwdsau8hsrd3i6ptlt

612 khz Turkic language is undoubtedly Kirghizia (Krasnaya Rechka)

https://app.box.com/s/0aazwa6lfg4da42teft2

Iran is on all the frequencies even the lowest ones , a bit like Spain in Europe.

Cheers

Pat

4207. New ULDXing Radio Case

4208. Todor's SDR in Bulgaria

Yahoo group: skywavesmw
Date: 2013-11-11 16:01:54 UTC
From: pedrozimpala2
Topic: 4208 Message: 4208

Hi

I was on Todor's SDR in Sofia around 1515 utc.

I heard AWR in Punjabi on 1251 and Radio Farda in Farsi on 1287 khz.
I don't know where these come from, could it be Kirghizia ?
The signal was very strong in Sofia.

Thank you all

Pat

Hi Pat,
it is now offline so I can't try, but it sounds like there is a problem
with overload or aliases in the rx. Did you try changing RF gain to see
if they disappear? Was it supposed to work also on MW. As such, a remote
rx in Bulgaria would be most welcome.

That's a good signal on 1341 kHz!

729 kHz could be Myanmar. They used to be on only until 1500, but maybe extended schedule. Not an every day catch.

Hi

I did not experience any particular problem with it.I hope the frequency readings are correct, as I can't see any of these 2 stations listed on these 2 frequencies (in my docs at least)

Yes I know Finland is in Europe, and a distinguished member of it , I read Sillampaa and Paasilinna and heard Sibelius !
I meant Western Europe is flooded with regional Spanish stations, they make DX difficult at my place !
Cheers

What worries me is that AFAIK there are no AWR transmissions on MW and
R. Farda isn't on 1287 kHz. Do you have any recordings?
One thing in SDR-Console is that when scrolling quickly along the band
tuning hangs sometimes, you have to click Centre button.
Do you know this Todor? Rx still not online, I'd like to try.

711 1500 TWN Han Sheng GD Kuanghua zhi Sheng, Hsinfeng (HC). Flute interval signal, as 981 Weak 9626 km
801 1500 TWN Han Sheng GD Kuanghua zhi Sheng, Kuanyin (TY). Flute interval signal Vweak 9620 km
846 1500 TWN Han Sheng GD Kuanghua zhi Sheng, Kuanyin (TY). Flute interval signal, just detectable Vweak 9620 km
981 1500 TWN Han Sheng GD Kuanghua zhi Sheng, Hsinfeng (HC). Flute interval signal, mixing with China and others Weak 9626 km
1269 1500 CHN China Radio Int./Voice of Russia, Xuanwei (YN). Interval signal under Germany Vweak 8562 km

The return of Asiatic DX after a lull for a few days.

JOIF 1413 was trying to poke through the Europeans with its familiar time signal at 1700. I am sure I could hear Japanese on the channel but the co-channel QRM, chiefly from Spain, squashed it flat. 1350 JOER seemed to be in parallel at this time (1600) but was well down in the noise.

Good DX!

Hi

no I did not record these 2, I guess you're right about the frequency adjustment which probably took place the wrong way..no I don't know this Bulgarian ham personally.

I will try 729 khz this afternoon, to check if it's Burma..

Cheers

4217. more on 729 khz

Yahoo group: skywavesmw
Date: 2013-11-13 16:49:17 UTC
From: patrice privat
Topic: 4217 Message: 4217

Hi

729 khz recorded on Mauno's machine in Finland..1510-1540 UTC

At the beginning the station is without doubt Vietnam, then another South East Asian programme appears underneath, also with monosyllabic tones.

https://app.box.com/s/fl9qwv799gsw39z3jdv5

Later (after a break), the channel is heavy with sharp whistle even off-frequency as far as 726 khz, so

I switched to 729 khz USB and the whistle is gone.

At that time I don't know if it's Vietnam or the other voice that I'm hearing, but "Myanmar" is mentionned

several times ; the voice is monotonous and I hear "South China Sea" so it could be a maritime weather

bulletin, unconnected to Myanmar (Myanmar mentionned as a "zone").

https://app.box.com/s/6f4fyetlabmlwkp88jk7

Anyway no beep or interval at 15:30 utc which should have been the case with Rangoon's time zone !!

We need a linguistic expert !

Cheers de Pat

I moved the flag this afternoon. It was at 340 degrees and is now at 15 degrees. It has definitely made a difference. The band is quieter too, more particularly at the middle/bottom of the band - which really surprised me.

Conditions are only average but I am hearing a few interesting stations from the Middle East. Here are my 1500, 1600 and 1700 files:

1500:
http://www.mediafire.com/download/hj72e6e137cqpja/2013-11-13_1500_(JF_Skegness)_(Average_Conditions_-_New_15_degree_flag).zip

1600:
http://www.mediafire.com/download/fxolak8afykrrac/2013-11-13_1600_(JF_Skegness)_(Average_Conditions_-_New_15_degree_flag).zip

1700:
http://www.mediafire.com/download/2a4lwseldfjnloz/2013-11-13_1700_(JF_Skegness)_(Average_Conditions_-_New_15_degree_flag).zip

Cheers

John

I think it is Myanmar, Vietnam was heard in addition at times. I was also listening this, and Alan Davies suggested checking if it is the same programme as on 5915 kHz. Unfortunately it was badly covered by CRI Russian. I could hear that both had a female speaker, but when CRI started playing music, Myanmar audio on 5915 kHz was lost completely. As South China sea was mentioned, could it be that it was a special transmission due to severe weather in the area?

4220. Loggings of note: 13/11/2013 - Launceston Tasmania

Yahoo group: skywavesmw
Date: 2013-11-13 22:41:13 UTC
From: Paul
Topic: 4220 Message: 4220

http://ulmwdx.blogspot.com.au/2013/11/loggings-of-note-13112013-launceston.html

Last night I managed to get in a good hours worth of listening on the band. I was a bit later then normal so the signals were much improved than in the past, I am feeling the effects of the late night today however

Overall I logged 10 New Zealand stations and validated a number of Australian and New Zealand stations. I am starting to develop some routines which help in identifying stations and logging my results for later analysis.

Frequency: 531
Callsign: 2PM
Area: Kempsey
State: NSW
Notes: Validated- 13/11/2013 - Advertisements and locations.

Frequency: 576
Callsign: 2RN
Area: Sydney
State: NSW
Notes: Validated- 3/11/2013 - Content

Frequency: 657
Callsign: Southern Start Network
Area: TITAHI BAY - Wellington
State: I-NZ
Notes: "Validated- 13/11/2013 - New Zealand voices and not an Australian station"

Frequency: 783
Callsign: Access Radio
Area: TITAHI BAY
State: I-NZ
Notes: Likely- 12/11/2013 - Islander type music. Signal was fading and quite weak.

Frequency: 801
Callsign: 5RM
Area: Renmark/Loxton
State: SA
Notes: Validated- 13/11/2013 - Station Announcement.

Frequency: 801
Callsign: New Zealands Rhema
Area: NELSON
State: I-NZ
Notes: Likely- 13/11/2013 - Islander type music.

Frequency: 810
Callsign: 2BA
Area: Bega
State: NSW
Notes: Validated- 13/11/2013 - Call in phone number.

Frequency: 819
Callsign: 2GL
Area: Glen Innes
State: NSW
Notes: Likely

Frequency: 846
Callsign: 2RN
Area: Canberra
State: ACT
Notes: Likely

Frequency: 846
Callsign: Newstalk
Area: WAINGAWA
State: I-NZ
Notes: Likely- 13/11/2013 - Voices sounded New Zealand

Frequency: 855
Callsign: New Zealands Rhema
Area: HAMILTON
State: I-NZ
Notes: Tentitive

Frequency: 882
Callsign: 3YB
Area: Warrnambool
State: VIC
Notes: Validated- 13/11/2013 - Local addresses on advertisements

Frequency: 909
Callsign: Southern Start Network
Area: OPAPA
State: I-NZ
Notes: Likely- 13/11/2013 - No Australian stations on this frequency.

Frequency: 1035
Callsign: NewstalkZB
Area: TITAHI BAY
State: I-NZ
Notes: "Likely- 13/11/2013 - Not an Australian station
audio."

Frequency: 1386
Callsign: Radio Tarana (Indian)
Area: HENDERSON
State: I-NZ

Notes: Validated- 3/11/2013 - via web stream.

Frequency: 1395
Callsign: 5AA
Area: Adelaide
State: SA
Notes: Validated- 13/11/2013 - Station ID announcement.

Frequency: 1404
Callsign: 2PK
Area: Parkes/Forbes
State: NSW
Notes: Validated- 3/11/2013 - Station announcement.

Frequency: 1404
Callsign: New Zealand's Rhema
Area: INVERCARGILL
State: I-NZ
Notes: Validated- 13/11/2013 - New Zealand weather reports and forecast.

Frequency: 1413
Callsign: NewstalkZB
Area: WILTSDOWN
State: I-NZ
Notes: Possible. Audio was extremely weak and hard to understand.

Frequency: 1422
Callsign: HPON
Area: Melbourne
State: VIC
Notes: Validated- 13/11/2013 - Content.

From: patrice privat
Topic: 4217 Message: 4221

yes, it makes sense Mauno, we need to do a bit more on this channel, I always found Myanmar exotic DX, never managed to get their air control in HF (usb), though I know their frequencies.

cheers

Topic: 4223 Message: 4223

Posting this here on the off-chance that somebody recognises the top of the hour sequence of this Oriental station on 1476 from 1600 yesterday afternoon.

https://app.box.com/s/gbpcyoflcwn65plfd2u3

The top of the hour is about 25 seconds into the recording, then a YL comes in.

Fingers crossed.

John

Hi John
it sounds a lot like the woman I caught on 1476 khz a few days ago.
at the times I hinted it could be Chiang Mai.
Listen to it again.

It does indeed sound like the same woman.

I always dreamt of logging a local station from Thailand. I love those names "Wor Sor Thor Phor Or Por". What does it all mean? :O)

Pat's clip is probably in one of the hill tribe languages. But at 1600 they give a full ID in Thai, and that is in your clip, albeit extremely weak after the IS:
"Thiinii Sathanii Withayu Krachaisiang Hang Prathet Thai changwat Chiang Mai", i.e. (approx.) "This is then National Broadcasting Service of Thailand, Chiang Mai province". For example Sor. Wor. Thor. is just short for Sathanii Withayu Thai. All this can be found in WRTH Thailand entry.

Mauno, I am blown away once again! (Mind you, it can get very windy here.)

I think I can hear those words in my recording although my ears are not 'tuned in' very well for these languages. I certainly hear something which, to my ears, is 80% like that ID. I will bow to your better judgement on this (because I want it in my logbook! ;O). Seriously, thank you for your detective work. I am catching up with your clips slowly. Please keep posting!

I am going through this afternoon's recordings as I type. Conditions are favouring China today, though I heard JOIF's time signal at 1400. It was not there at 1500 or 1600 however. 1476 produced some very interesting Asiatic music at 1600 but there was no ID on the hour.

Thanks again Mauno.

John

900 1600 CHN CNR 1?, Site? YL Beijing ID after six pips. V weak
981 1600 CHN CNR 1, Multiple sites YL Beijing ID after pips V weak
1044 1600 CHN Xinjiang RGD Uighur/CNR 13, Multi-tx Tentative. Chinese ID after time pips but not in // Xinjiang RGD 738 Zonghe V weak
1359 1600 CHN CNR 1, Three sites together Echoey YL Beijing ID after pips. Third pip shortly after. Clear and dominant. Probably Golmud in there. Weak
1494 1600 CHN Xinjiang RGD 738 Zonghe, Multiple txs Pips, OM ID, as 738. Echo, indicating more than one tx received Weak **
1539 1600 CHN CNR 1, Golmud/SARFT916 (QH) YL Beijing ID after pips V weak 7135 km
603 1700 CHN China Radio Int./Voice of Russia, Dongfang/SARFT871 (HA) CRI Interval signal V weak 9494 km

** Personal Skegness 'First'

Does anybody know if that standard YL "Beijing... " ID heard on CNR 1 is used on other CNR national networks? She is very distinctive and it might just narrow down a station I heard earlier today.

Some recordings of today's DX:

1494 Xinjiang RGD 738 Zonghe, Multi-tx 1600 14-11-13
https://app.box.com/s/nqumqdtv1w848zjharwd

738 Xinjiang RGD 738 Zonghe, Urumqi 1600 14-11-13
https://app.box.com/s/576dye2ivo8yxamd6a4r

1044 1600 14-11-13
https://app.box.com/s/vysjbplvuk1ira1gk2d4

I think there is an ID on 1044 but it's quite well buried. I suspect it's the Uighur outlet of Xinjiang RGD, going by the conditions. I think there was a Kazakh outlet on another frequency, but I can only guess with some stations.

I moved my flag slightly yesterday. It now points towards 15 degrees (Google Maps is quite clear it is 14 degrees but I hate to be that pedantic). Hopefully this will improve DX from the far east. West coast North America, Alaska and Hawaii should still get through (now there's wishful thinking!) and perhaps with a little less interference from the east coasters.

Background noise levels have improved too, surprisingly, and are down to -120dB in the X band, gradually tapering off to below -130dB at the bottom of the band. About 3 to 5dB of noise at the top of the band is caused by my router or its psu. The noise drops to -125 when the router is switched off.

Good DX!

1098 1500 CHN CNR 11, Golmud (QH). Top of the hour jingle/music with YL ID. Thanks to Mauno for your help again. V weak 7136 km **

** Personal Skegness 'First'

Very poor conditions this afternoon with hardly anything coming through from the far east, so it was a surprise to hear CNR 11 on 1098. I heard this tentatively yesterday but the signal was slightly clearer today and I could hear the YL ID being spoken over the top of the hour piece.

Good DX!

Hi Steve.

Yes it was still daylight at the time of my Chinese reception. My east coast location gives me an advantage regarding Asiatic DX.

Sunset yesterday was 1600 so it is dark overhead an hour after this and this will get earlier by another 20 minutes or so by mid-December.

http://uk.weather.com/climate/sunRiseSunSet-Skegness-UKXX1201:1:UK?month=11
http://uk.weather.com/climate/sunRiseSunSet-Skegness-UKXX1201:1:UK?month=12
<http://uk.weather.com/climate/sunRiseSunSet-Skegness-UKXX1201:1:UK?month=11>

1521 CRI Urumqi is the first Chinese station to appear at my location and has usually settled in well by 1400 though it can be heard before 1300 with weak signals at this time of year. The greyline at 1300 is exactly at the midpoint between here and Urumqi.

Golmud is listed with 1 megawatt so I am surprised it hasn't been heard here before. I think this is the transmitter Tim and I used to hear regularly from the Matlock Forest beverage site when it was on 1134. I had been wondering what the jingly music was on 1098 the last two days as I had not heard it before.

Here is my recording from yesterday afternoon: https://app.box.com/s/brfulc8tj88ewp6xc36l You will hear the end of a YL song, then a YL before the hour. Then time pips (and a very weak long tone from RTI in the background) and ID from Slovak Radio, followed by the jingly music. Then you will hear a YL talking over the music after the Slovak Radio has finished. Headphones will help if you can't hear this, or compare with an old DXpedition recording of the same ID: https://app.box.com/s/mzpb8ic7a47uimpejz7n (courtesy of Lars SM2GHI from January 2013).

Good DX!

John

Yes, very likely. It is usually RTI who emit that tone on 1098. They would be in // with 612. South Korea could be a possibility here (not IDd here yet) but RTI is the usual suspect.

4237. New Zealand Station Loggings - 19/11/2013

Yahoo group: skywavesmw
Date: 2013-11-19 22:05:21 UTC
From: Paul
Topic: 4237 Message: 4237

Last night I managed to log another New Zealand station.

549kHz RHEMA BROADCASTING GROUP (AWANUI NZ)

This signal was buried down with 2CR Cumnock however I was able to find a location of my loop aerial where I could null this out enough to get a readable signal.

I also validated 657kHz Southern Star(TITAHI BAY - Wellington) by a station ID announcement.

1386kHz Radio Tarana (HENDERSON)was also fairly strong however I had some bad interference a couple of times on it, I suspect something domestically is causing this.

4239. Improving MW Conditions

Yahoo group: skywavesmw
Date: 2013-11-21 18:09:43 UTC
From: scottishdxer_markborthwick
Topic: 4239 Message: 4239

Hi All
Its been a dire few weeks for MW Dxing towards North America and for days even the normal East coast stations were really weak, and I have not been recording some nights. Reading posts and Dxers blogs I thought I would record last night and was delighted to hear some good signals from North America again. And the normal east coasters were coming in with good signals.
The X-band seems to be down a little with the exception of a few like Rebelde and Caribbean Beacon.
I was receiving Radio Formula 1470 khz pretty good for most of last nights recordings with the best signal in the 07:00utc clip "del numero uno del rock and roll programme"
Also WDHP 1620 khz at 04:00utc came over Rebelde to give its full station ID.
Radio Formula, KVNS and WDHP <http://youtu.be/m41I-_uGPgk> short video on how these three were received this morning.

I hope conditions improve even more, and we don't get another depression on the band.
Cheers Mark ScottishDxerPerseus SDR + Station ListSuper KAZ Array 320 deg

1413 1400 J JOIF KBC-Kyushu Asahi Hoso, Fukuoka (kyu-fuk) JOIF time signal punching through a noisy band. Audible at 1500 & 1600 too. V weak 9225 km
972 1500 KOR HLCA KBS Hanminjok Bangsong 1, Dangjin (ccg) Time signal, mixing Germany. V weak 8740 km
981 1600 TWN Han Sheng GD Kuanghua zhi Sheng, Hsinfeng (HC). Kwang Hua ID by OM at 12 seconds past the hour. Weak 9626 km

Nice to hear JOIF again, even if it was only strong enough to deliver the time signal. Conditions seemed poor overall with very little other DX from the far east. Chinese signals were well down too.

From yesterday I logged CRI on 1521 at 1235 but I forgot to post the log. 1235 is the earliest I have ever heard 1521, or anything else from the far east for that matter.

Good DX!

But here BSKSA 1440 was coming through right over RTl Between 14:30 and 16:00 but it's no surprise with them running 1600KW of power!

Why they bother with that much power is beyond me, and I always wonder why they have so many ultra high power tx's both MW and SW.
Didn't hear China on 1521 as Saudi was completely swamping that signal!

CRI has not been as strong as it was a few weeks ago. Saudi Arabia has often been dominant here, even when CRI puts in the earlier appearances. You should hear CRI well before Saudi settles in, so check around 1330 to 1400. Saudi Arabia has usually taken over by 1600 at the latest, but you might still hear the CRI swapping over with it well into the evening CRI used to sign off at 2000 though I am not sure if they still do. You _WILL_ hear CRI LOUD AND CLEAR sooner or later.

It seems to me that the strength of CRI 1521 does not have any bearing whatsoever on the reception of other countries from the far east. I have not been able to work out any patterns regarding what to expect from the far east. No clues at all. I listen from one day to the next, never knowing what is going to come in. Even the reception of one of the Kuang Hua/Han Sheng transmitters does not mean I will receive any of the others, yet sometimes four of them have been heard on the same hour, same day. I note that 981 did not have the cheerful flute music this time, just the OM ID - which is unmistakeable if you hear it. Check my earlier recordings. Let me know if you don't still have them.

Good DX!

Hi All
This mornings signals are not as good as yesterday from North America but Mexico was coming in as good as yesterday and 1470 and 1590 were good. around 06:00utc KVNS was also very good this morning
XEAZR-AM ZER Radio on 1650 was received from 05:30utc with several IDs given between music the best was at 06:01utc the last time I received this station was back in 2012.
Here is an MP3 from 06:01utc if anybody wants to check if they have got it also ZER Radio 1650

Interesting to read your account Mark. Well done on the Mexican.

The path to North America has been difficult for the last few weeks, though it briefly picked up around 0200 when KXEL returned with a fair signal on 1540. Conditions had fallen right down again by 0400 and there wasn't a single TA carrier by 0800. I still don't know how much of this is attributed to the flag now being at 15 degrees.

Asia is starting early again today however with CNR1 1377 fair over Lille as I type. Greyline enhancement I presume, but it will die down until about 1500. It's always a battle then as Europe fades up.

Good DX!

Checking my 1500 file this afternoon reveals Big Ben chimes on 819 kHz.
To be more precise they are not the actual Big Ben chimes but a copy and
slightly quicker version of them.

4250. KGA 1510?

Yahoo group: skywavesmw
Date: 2013-11-26 19:02:17 UTC
From: John Faulkner, Skegness
Topic: 4250 Message: 4250

This morning was much, much better for transatlantic DX.

I have this recording of a possible ID on 1510. It sounds like KGA and there's a 50/50 split between those who think it's KGA and those who don't.

My hope is that somebody has the 0500 slot recorded this morning and can hear more than I did.

Here's my recording if you fancy a listen. Let me know what you think.

https://app.box.com/s/evsvrzclt50sy90zthpu

You should hear the letters KGA at 8 seconds into the recording. I looped this part at the end. Actual on-air time for the call letters was 05:00:03.

KGA would be a first for me here, though I heard it a few times back in Nottinghamshire.

Good DX!

John

Hello Jurgen.

I checked the offsets, initially without calibration, but later calibrated using Photoshop as you will see.

Assuming WUFC is the stronger carrier at 1510.006, I have another carrier on 1409.987, exactly KGA's offset. *Please tell me what you see Jurgen so I know I have got this right. *

Firstly, I must tell you that I am unable to calibrate Perseus using the traditional method, so I used Photoshop to slide the frequency scale so I could create the same effect. I was unsure who was the dominant signal at 0500, WLAC or WUFC, so I made two frequency adjustments in Photoshop as you will see below.

Without calibration (no Photoshop adjustment):
https://app.box.com/s/s3gl4fexs9npd7wezq89

Shifting the scale, assuming WUFC is the stronger station:
https://app.box.com/s/xtzx1shhyxeiyx4xvp8j

Shifting the scale assuming WLAC is the stronger station:
https://app.box.com/s/r98lvgxpyyw81h53ptjy

The method is a bit unorthodox but I hope this makes sense.

Thanks

John

Hello John,

> Assuming WUFC is the stronger carrier at 1510.006, I have another

Just measuring, WUFC is at .000

> carrier on 1409.987, exactly KGA's offset. *Please tell me what you see
> Jurgen so I know I have got this right. *

> Shifting the scale, assuming WUFC is the stronger station:
> https://app.box.com/s/xtzx1shhyxeiyx4xvp8j

That seems to be almost right, but you put WUFC on .001
But KGA is so weak, that you shouldn't be able to hear it

Oh boy your process is very time consuming.

If you haven't it calibrated, better turn it off entirely. Then determining the real offset becomes easier:
Go to 810 and measure the offset once and calculate k
Assume you measure 810123 Hz

calculate k
k= 810000 / 810123

on 1510 measure the offset
realOffset= measuredOffset * k

If you have calibration on but with a wrong value, then the above scheme can not work

4257. Re: KGA 1510?

Yahoo group: skywavesmw
Date: 2013-11-27 14:35:37 UTC
From: Kugellager
Topic: 4250 Message: 4257

I don't think it is KGA. I think it is WUFC.

From 00:02 to 00:05 I hear "Sports Center...(garbled) UFC"
Then from 00:07 to about 00:10 I think I hear "Football at 9pm" then some slogan. At 00:06 I hear something like "my town" or "pie town" Could it be "bean town"? Which of course would be Boston.

The part you have repeated is the part I hear "Football at 9pm"

Listen to the clip with the high end removed. I listened with all sliders at 1k and above at 0 and even moved it so that I was only listening to 500 Hz and below. Use speakers/headphones that have better bass.

Hope that helps.

Hello John,
in what stage does your calibration go wrong? Could you please try acc.
to the below once more and tell me, what doesn't work out or what you
don't understand:

Choose AM, Zoom, 6 kHz filter, 0.196 kHz span
Click Tuning - Center (if not lit)
Tune to your favourite calibration frequency
Click CalClr
Double-click on the carrier of the calibration station on the big screen
Adjust the last fq digit, if necessary
Click Cal

http://www.youtube.com/watch?v=kISgXe8xuB4&feature=related

I have them on 1509.988 and 1510.001 (or about ? Hz lower).

Mauno

Sorry for the delay. Busy with one or two things, including a DX trip to
The Wash yesterday, which you can read about here:
http://skegnessdx.blogspot.co.uk <http://skegnessdx.blogspot.co.uk/>

My Perseus won't calibrate accurately enough using the traditional
method but I WILL follow your instructions later Mauno. Not long before
I have to go out again.

I agree John. After some more listening to other toh recordings the
station is definitely WUFC. It was just trying to get the better of me.
KGA are now sports, so the "News" mention was not in keeping with the
format and what I heard on KGA's web stream. Maybe that was a brief
snippet from WLAC.

Conditions are looking up though. 1470 CJVB has been in this morning and
yesterday morning at 0300 - very weak though.

Thanks everybody else also. Will look at this later.

Cheers

John

4260. Re: [skywavesmw] Calibration

Yahoo group: skywavesmw
Date: 2013-11-28 17:55:21 UTC
From: John Faulkner, Skegness
Topic: 4250 Message: 4260

Trying the calibration method used in the video.

To begin with I input the frequency. 810 kHz. AM mode. 6kHz IF bandwidth. "Zoom" selected on the control bar. AVG "Sec" selected but not "Main".

At this stage the "Center", "Cal" and "CalClr" are not highlighted. When I click "Center" I only see "Cal" highlighted, so I cannot follow the video, exactly, from the start.

Trying to pick up on where I cm going wrong, I select "Center" and "Clr". This gives me the ability to then select "CalClr".

I double click on the carrier (Main window) and see 810 jump to 810.510. The next problem is the "Cal" button is still not highlighted. I press "CalClr" so I can activate "Clr" so I can click on it and the frequency jumps to 811.000 kHz.

So now my 810 is reading 811 !!!

Sorry. Nothing appears to work here as it should. My brain cell is now confused.

John

Now my tuning is out when I click on carriers (Spectrum mode). I cannot listen to this and have to fine tune everything with the mouse wheel.

From: John Faulkner, Skegness
Topic: 4250 Message: 4262

I managed to correct the audio by repeating the instruction on the video
- and NOT using the "Center", "Cal" or "CalClr" buttons, but my readout
is still 1kHz high.

From: John Faulkner, Skegness
Topic: 4250 Message: 4263

No it isn't. It worked. My brain cell is clearly confused. I thought the European channel was 1304. It's 1305 of course. Silly me!

So this appears to be spot on (I think) but I had to find my own way to bring about the calibration.

Let's hope this is correct. It is certainly more accurate then it was. 909 kHz is at 909.003 kHz when I effect maximum zoom so I need to fine tune it a bit more if I can. Time will tell.

John

Topic: 4250 Message: 4264

Forget that last message. Calibration is way off now.

I will stop sending these messages for now but my Perseus is suddenly a totally different radio and cumbersome to tune. :O(

From: Mauno Ritola
Topic: 4250 Message: 4265

When you click Center and CalClr is not highlighted, you can skip that step. It does that after recording or playback for some reason. Restart and do it again, if CalClr doesn't become highlighted, DON'T click on Cal, but double-click the carrier first.

Thanks Mauno.

I re-started Perseus and calibrated from scratch. It worked, though I am still .003 out. I suppose that is to be expected as Perseus is not a precision measuring tool. I guess this minor discrepancy is due to the less than precision mouse pointer positioning.

4267. AW: [skywavesmw] Calibration

Yahoo group: skywavesmw
Date: 2013-11-28 19:19:24 UTC
From: Günter Lorenz
Topic: 4250 Message: 4267

Hello John,

you're right about the mouse pointer. Getting the ultimate 0.000x out is difficult. Try at the lowest possible BW, 6 kHz may be too wide.
The calibration could also be done / optimised via tweaking the registry, but that's a bit like brain surgery.

73,
Günter

Von: skywavesmw@... [mailto:skywavesmw@yahoogroups.co.uk] Im Auftrag von John Faulkner, Skegness

Restart and do it again, if CalClr doesn't become highlighted, DON'T click on Cal, but double-click the carrier first.

Mauno

28.11.2013 19:55, John Faulkner, Skegness kirjoitti:

Trying the calibration method used in the video.

To begin with I input the frequency. 810 kHz. AM mode. 6kHz IF bandwidth. "Zoom" selected on the control bar. AVG "Sec" selected but not "Main".

At this stage the "Center", "Cal" and "CalClr" are not highlighted. When I click "Center" I only see "Cal" highlighted, so I cannot follow the video, exactly, from the start.

Trying to pick up on where I cm going wrong, I select "Center" and "Clr". This gives me the ability to then select "CalClr".

I double click on the carrier (Main window) and see 810 jump to 810.510. The next problem is the "Cal" button is still not highlighted. I press "CalClr" so I can activate "Clr" so I can click on it and the frequency jumps to 811.000 kHz.

So now my 810 is reading 811 !!!

Sorry. Nothing appears to work here as it should. My brain cell is now confused.

John

On 27/11/2013 14:52, Mauno Ritola wrote:

Hello John,
in what stage does your calibration go wrong? Could you please try acc. to the below once more and tell me, what doesn't work out or what you don't understand:

Choose AM, Zoom, 6 kHz filter, 0.196 kHz span
Click Tuning - Center (if not lit)
Tune to your favourite calibration frequency
Click CalClr
Double-click on the carrier of the calibration station on the big screen
Adjust the last fq digit, if necessary
Click Cal

http://www.youtube.com/watch?v=kISgXe8xuB4&feature=related

I have them on 1509.988 and 1510.001 (or about ½ Hz lower).

Mauno

27.11.2013 1:05, John Faulkner, Skegness kirjoitti:

Hello Jurgen.

I checked the offsets, initially without calibration, but later calibrated using Photoshop as you will see.

Assuming WUFC is the stronger carrier at 1510.006, I have another carrier on 1409.987, exactly KGA's offset. Please tell me what you see Jurgen so I know I have got this right.

Firstly, I must tell you that I am unable to calibrate Perseus using the traditional method, so I used Photoshop to slide the frequency scale so I could create the same effect. I was unsure who was the dominant signal at 0500, WLAC or WUFC, so I made two frequency adjustments in Photoshop as you will see below.

Without calibration (no Photoshop adjustment): https://app.box.com/s/s3gl4fexs9npd7wezq89

Shifting the scale, assuming WUFC is the stronger station:
https://app.box.com/s/xtzx1shhyxeiyx4xvp8j

Shifting the scale assuming WLAC is the stronger station:
https://app.box.com/s/r98lvgxpyyw81h53ptjy

The method is a bit unorthodox but I hope this makes sense.

Thanks

John

On 26/11/2013 22:24, Jurgen Bartels wrote:

From: Mauno Ritola
Topic: 4250 Message: 4268

You're welcome. How deep did you zoom for calibration? I suggested 0.196 kHz span.
If you can see WWV carrier at 15 MHz and calibrate there, you get excellent accuracy for MW, because the error will be only one tenth at 1500 kHz.
And remember, that the rx must have been on for quite a while, preferably one hour. 'On' in this case means in listening position, not just plugged to mains.

Mauno

I updated the instructions slightly.

Choose AM, Zoom, 6 kHz filter, 0.196 kHz span
Click Tuning - Center (if not lit)
Tune to your favourite calibration frequency
Click CalClr (if lit)
Double-click on the carrier of the calibration station on the big screen (if it has gone outside the view, use wider span)
Adjust the last fq digit, if necessary
Click Cal

4269. Re: [skywavesmw] Calibration

Yahoo group: skywavesmw
Date: 2013-11-28 19:48:11 UTC
From: John Faulkner, Skegness
Topic: 4250 Message: 4269

G?nter:

Re. the mouse pointer accuracy: This is one of the things which isn't explained in any real depth on any of the instructional videos I have seen. Zooming in as much as I could did not help matters as there was still an element of luck about it.

Mauno:

I was zooming in to 0.196 kHz and the IF down to 3 kHz or 1.6 kHz.

I calibrated a few more times since my last email and the results were variable, but I managed to get to .000 a few moments ago. I'm sure it will change. Doesn't it vary with changing room temperature, etc.? .000 is pushing it a bit so as long as we have references from other accurate stations then we can shift and adjust accordingly. One thing for certain is that calibrating the Perseus is not as straight forward as the PCR1000 was with SpectrumLab. The cropping in Photoshop makes much more sense if the variables are known - it's so much quicker for me and is an option I will probably use again.

Thanks again and apologies for the running commentary at the beginning.

John

4270. Re: [skywavesmw] Calibration

Yahoo group: skywavesmw
Date: 2013-11-28 21:44:17 UTC
From: Mauno Ritola
Topic: 4250 Message: 4270

Due to mouse pointer accuracy I started calibrating on the bigger screen. With some practice it is very easy to calibrate to ?1 Hz accuracy also on MW, but I usually use 15 or 10 MHz, because the accuracy gets better that way on MW. Just recheck my poor video, if you don't hit on mark the first time, you can still adjust it with mouse scroll wheel to get it exact.
The effect of normal room temperature change is insignificant on MW. I find Perseus definitely easier to calibrate than Spectrum Lab. Just do it every now and then and you'll agree.

Best regards,

Mauno

A gentle return to Asiatic DX conditions after a few days of relatively little of it. The giants like 1098 RTI, 1557 RTI and 1566 HLAZ have still been received on a daily basis, with poor signals, but they returned with reasonable signals this afternoon.

One thing I have not really tried from here much is tropical band DXing. Given the decent Asiatic conditions on MW I thought I should look for the Asia at the low end of shortwave. I was pleasantly surprised to receive the three dometic Australians, which all showed a little improvement about an hour after I had logged them. I wonder if the old RRI stations are still active in the 120, 90 and 75 metre bands. I have never heard Indonesia so it would be great to catch them if I can. I understand that a lot of these stations have left the tropical bands now.

I noticed a lot of beacons across MW when I moved my flag to 15 degrees. I thought I would start to note them in my log. There are others but conditions must have changed. From memory, 650 and 680 were a couple of others but they were not present today. I forget other frequencies.

Good DX!

Thanks for the tip G?nter.

Not sure what I am hearing on 594 but their are two stations, neither of which are in // with the two stations I am hearing on 6090 so no parallel checking and I cannot find a web stream.

What I am hearing on 594 sounded like Latin rhythms at first, though I guess they could be African rhythms. V weak and mixing with Morocco. There was an OM presenter and I am sure he was speaking English. I *think* I heard "Nigeria" mentioned but it's too weak and the lack of a parallel web stream makes it difficult to be sure.

4274. Re: [skywavesmw] Calibration

Yahoo group: skywavesmw
Date: 2013-12-01 11:46:17 UTC
From: John Faulkner, Skegness
Topic: 4250 Message: 4274

I have been doing further experiments with calibration. I saw Scotland 810 at +4 Hz and 5Live 909 also at +4 Hz. I wonder if this will be uniform across the band. Well, in an ideal world.

I am hoping to watch the Urumqi carrier fade in and make a note of the earliest I can hear the audio as the signal was pretty good at 1250 yesterday afternoon.

Then I noticed a strange quirk of the Perseus receiver. With span set to 0.196 Hz and BW set to 3 kHz, I see 810 kHz and 909 kHz at +4 Hz. When I decrease the BW to 1.6 kHz the carriers move to +6 kHz and when I decrease to the minimum 0.8 kHz BW the carriers move to +9 kHz. This is a shame as I quite enjoy the carrier reading side of the hobby but it is obviously not a good idea for me to quote readings without a suitable disclaimer. Something like "Warning, this reading is totally inaccurate" would be appropriate.

Really disappointed.

From: Mauno Ritola
Topic: 4250 Message: 4275

I don't know how that is possible in your setup, I have never heard about such before.

One more thing to try: are you familiar with Windows registry? If you put your receiver online for a while, I could calibrate the server side. Then you'd just need to copy the AdcSamplingRate value of Perseus server to Perseus client side.

Subject: [ultralightdx] More ultralight loggings from Arctic Norway

Group,

A few days ago, I received the 12" x 7.5" FSL that I bought from Everett Sharp. What a magnificent piece of craftmanship! Although conditions on MW has been really crappy this weekend, I've been playing around with the FSL and my 7.5" loopstick PL-380, using my eton E1 + Wellbrook ALA-1530 combo as SSB spotting receiver.

K-index has been 3 most of the time here, which affects us living north of the polar cirkle in a somewhat higher degree, but there was still enough signals on the band to check the performance of the FSL made by Everett. In my opinion, the performance is equal, or at least close to the ALA-1530. I.e. there is nothing that I can hear with the E1 / ALA-1530 combo, that I cannot hear with the modified PL-380 + FSL.

So here we go, then (note: the two stations logged november 19, is logged with the PL-380 inductively coupled to my Quantum v2.0 loop).

585 29.11 1207 Radio Rossii, Perm, Siberia. With regional programming and ID "Radio Rossii, Program Perm Kray".

711 29.11 1627 Voice of Kuanghua, Hsinfeng, Taiwan. Talks and short musical items. // 981 kHz.

680 30.11 0909 KBRW Barrow, AK. At this time with nonstop overnight music, and short items from National Public Radio. Good signal before conditions went worse. Actually decent audiability barefoot(!) on the supercharged PL-380.

828 29.11 1300 Pravoslavnoye Radio, St. Petersburg. Starting up programme with ID and Orthodox choir singing.

891 30.11 1505 Ningxia PBS, up and down in the noise. Rather common here.

891 30.11 1515 Sor. Wor. Thor. (Radio Thailand), Sava Buri (Bangkok) with spoken words. Indicating conditions turning more south-east. Good signal for a while. Listed with 1500 KW, so it shoul be...

945 29.11 1345 CNR1, unknown site. Pretty strong, and with Heilongjiang PBS audiable in the background.

972 28.11 1930 KBS Haminjok je-il Bungson Imni-da, Danjin, South Korea. Strong this evening with a mix of koran ballads, pop and "smalltalk".

981 28.11 1827 Voice of Kuanghua (Kuanghua Shih Cheng), Hsingfeg, Taiwan. Huge signal and lots of chinese pop-ballads. Also on 711 kHz.

1017 29.11 1402 CRI, Jilin, very strong carrying programme in korean language.

1089 29.11 CNR6 "Shenzhou Easy Radio", Fuzhou. Huge signal, with "elevator music" and babbeling/giggeling women ;)

1134 29.11 1434 KBS, Hwaseon, South Korea. Talkshow "japanese style" and a pretty decent signal.

1143 30.11 1626 AIR with raga-chanting. Up for just a few minutes, so couldn't catch the local ID at 1630. There are two locations listed here: Ratnagiri and Rothtak, so it's either one or the other.

1242 28.11 1652 JOLF Nippon Hoso, Tokyo, with many "Nippon Hoso's" just before the full hour. Most common japanese station here, together with 1413-JOIF.

1278 28.11 1647 JOFR RKB Mainichi Hoso, Fukuoka, up with a quick "RKB" in the cocktail of stations on the frequency.

1287 19.11 1445 Trans World Radio, Bishkeq, Kyrgysztan. Interval signal and announcements in a central asian language.

1287 29.11 1406 Radio Rossii, Regional Groznyj. Carrying service for the russian minority in Tjetjenija.

1314 19.11 1607 Antena Satelor, Constanta, Romania. Canned ID and domestic pop music.

1350 28.11 1615 Tongliao PBS, with several announcments mentioning Tongliao. Jiangxi PBS audiable in the background.

1386 28.11 1540 Tianjin Shenhuó Guangbó, Yangliujing (Tianjin Life Station), with phone-in programme as usual. Pretty common station here, but first time for me with ultralight gear!

1413 28.11 1721 JOIF Kyusho Asaki Hoso, Fukuoka. As usual with a talkshow, this time a day. Difficult to get rid of BBC/Oman on this frequency - even with a loop!

1521 30.11 1134 CRI, Ürümqi. Already at this time with announcements in russian: "Govorit Radio Kittaya". This one usually indicates poor conditions at my location.

1566 28.11 1756 HLAZ FEBC, Jeju, with choir singing and announcements in Chinese. Not so strong as it usually is, but conditions is generally crappy.

That's all for now. Hopefully conditions will improve until next weekend, when I plan to take a trip to my "DX-Caravan" in a very quiet (noise-wise) location. Up here in the north, it usually takes a few days for the MW-band to recover after a period with high K-indexes.

73!

Hans / LA2MOA
Vardo island,

Arctic Norway
QLR: 7.5" loopstick PL-380 + 12" x 7.5" FSL
Spotting rig: Eton E1 + ALA-1530

4278. Re: [skywavesmw] Now: Nigeria on 594 kHz

From: BEAVAN SIMON
Topic: 4272 Message: 4278

Thanks for this Günter.

I couldn't hear it last night, just getting Radio Sim, but tonight it is clearly audible under Radio Sim and // 6090 which is getting massive QRM from presumably Caribbean beacon, but luckily offset and notchable.

I wouldn't have thought of trying for this.

Simon

From: John Faulkner, Skegness
Topic: 4250 Message: 4279

Mauno, Jurgen, I don't know why my computer does the things it does. What I will have to accept now is that I should draw a line under this and leave Perseus well alone regarding frequency measurement. Perhaps I should be able to see things more clearly when Perseus is used in conjunction with SpectrumLab, but I need more known accurate offsets and I doubt 810 and 909 are going to be enough.

I am grateful for your help with this. Thanks again.

John

Topic: 4280 Message: 4280

972 1400 KOR HLCA KBS Hanminjok Bangsong 1, Dangjin (ccg) Time signal, music and OM. Almost equal levels Germany at times. Weak 8740 km
1017 1400 J JOLB NHK2, Fukuoka (kyu-fuk) Presumed. Japanese time signal. Almost certainly JOFR. Too weak for ID. Mixing weaker CRI. V weak 9242 km **
1278 1400 CHN UNID CNR station. Distinctive three slower Chinese pips, as heard on Scandinavian files. Not heard here before. V weak
1323 1400 CHN China Radio Int., ?r?mqi/Hutubi-SARFT654 (XJ) Interval signal V weak 6041 km
1413 1400 J JOIF KBC-Kyushu Asahi Hoso, Fukuoka (kyu-fuk) Presumed. Clear time signal but squashed by Premier Christian Radio. Japanese OM underneath, V weak 9225 km **

JOLB is likely. The signal was too weak for an ID but I don't see anything else it could really be. Listening to Scandinavian Perseus files also shows this and CRI to be the regulars on 1017.

While scanning around the band on the Scandinavian files I have I noticed a slight variation of the The Chinese interval signal on 1278. Instead of six pips, with the sixth pip being an octave higher, this one was three pips, with the third still an octave higher. A Beijing ID was heard on the Scandinavian file. I noticed this for the first time here today. It was too weak to hear any vocals and I wouldn't even like to guess the site, but it's another one to watch out for at least.

4283. Yahoo Nova

Yahoo group: skywavesmw
Date: 2013-12-10 13:16:45 UTC
From: <julian@...>
Topic: 4283 Message: 4283

Oh NO - we've been Nova'd. I thought the uk-yahoo Groups had been spared but they've got round to us now.

Those who have seen this on other groups will know it is a very poor system for a forum, and will by now have seen many links to discussions on the change and links for complaining.

My advice is to subscribe to emails, either individual mails of the Daily Digest, which continue to work in the familiar way - use the 'Management' tab. Then try to navigate round the new front page. All threads are under the 'Conversations' tab. You can search the group with the 'Search Groups' box at the head of the front page, which searches only this group.

You can still reply online to posts, or start a new thread with the 'New Topic' button.

I will investigate later whether we can get the old familiar 'Skywaves' image back on the front page

Gd dx - Julian

Further notes on using Yahoo Nova online
I meant to say "subscribe to emails, either individual mails OR the Daily Digest"
At this time it is not possible to 'Reply' to a post online. I hope this can be fixed soon.
I have posted this message as a 'New Topic' "Re: Yahoo Nova" so it may not become linked to my last message
You will see any other posts in a thread if you hit "Show all messages in this topic" at the foot of the page

The kafa2500 does not work well above 15-20 MHz whereas my home-brew works very well on 26 MHz - see my video of reception of the Moscow Student station on my blog. I also get an extra S point or two on my beacon station for DX - Radio North 846 from the northern part of the Irish Republic - however that may well be due to the increased vertical height but I am certainly not seeing a need for a pre-amp and I used a Wellbrook FLG100 with the kafa2500. The kafa2500 unit is very good and I have had great results with it. Unfortunately the past six-seven weeks NA DX has been poor in southern England - the odd few nights notwithstanding. Hopefully we'll see some better conditions in the weeks ahead to see how it performs for mid-west etc.

Regards

Stuart

4289. Slight recovery in Asiatic conditions

Yahoo group: skywavesmw
Date: 2013-12-19 17:39:03 UTC
From: John Faulkner, Skegness
Topic: 4289 Message: 4289

Some recovery on medium wave at last. I had begun to think Asiatic DX had gone for the season.

South Korea noted on 972 and 1134 at 1500 this afternoon. Also RTI returned to 1098 and 1557 at the same time. A few Chinese re-appeared too, notably 738 (pips ten seconds late) 1359 and 1593. 1521 was there as always.

Transatlantic DX was still virtually non-existent, as it has been for weeks.

Good DX!

John

From info on http://toroids.info/BN-43-3312.php it would not seem to be appropriate for MF and low HF frequencies. I am looking at Wideband Transformer range: 5 - 400 MHz whereas the BN-73-202 is quoted as 0.2 - 30 MHz.

Not here Simon. I listened before midnight and again around 1am. I heard feeble audio from WUFC 1510 and WWKB 1520 but that was all, so I didn't bother recording overnight as a result.

There's even less as I type. Even North American carriers are way down - well below audio level.

Hope you're doing better.

From: <mcsporan@...>
Topic: 4296 Message: 4296

Hi All

MW propagation is still pretty poor towards North America however signals yesterday and this morning on the X-band were good. And the best signals were around 0700utc

KRJO, WCNZ, WTNI, KVNS all booming in

Mexico was particularly strong this morning on 1470 and 1650 with Radio Formula and ZER Radio. Here is my YT video of the reception http://youtu.be/jbuZv21KYiM
http://youtu.be/jbuZv21KYiM

The rest of the band has the usual suspects from the East coast but signals are well down on normal.

Still waiting for a good opening to bring in some new stations.

Good DX

1413 1500 J JOIF KBC-Kyushu Asahi Hoso, Fukuoka (kyu-fuk) Presumed. Time signal. Too weak for vocal clarity V weak 9225 km
1557 1500 TWN RTI iLoveMusic 1557/Radio Taiwan Int., Kouhu (YL) Time signal and ID Weak 9715 km
972 1600 KOR HLCA KBS Hanminjok Bangsong 1, Dangjin (ccg) Time signal and ID, just below Germany Weak 8740 km
1575 1600 THA Voice of America/Radio Saranrom, Ban Phachi/Rasom (pay) Asiatic language (Thai?) and Voice Of America ID Weak 9410 km

Again, a slight improvement in Asiatic conditions.

North American DX continues to go downhill. There were barely any North American carriers visible this morning at 0200, let alone audio. I know DXers in southern Scotland have been hearing more, but this is probably the worst morning for North American MW I have experienced since moving here. Once again, it seems that when the Asiatic DX lifts up, I lose North America, and vice versa.

Good DX!

4298. BN73-202 Tranformer measurements

Yahoo group: skywavesmw
Date: 2013-12-22 18:48:34 UTC
From: Jurgen Bartels
Topic: 4298 Message: 4298

Since Stuart recently brought up this subject.
Earlier this year I built a BNC 1:1-transformer using a BN73-202 core, in order to cut the DC connection that feeds LF noise back into my antenna, which ruined the 10-50 kHz signals.
http://dx.3sdesign.de/temp/1-to-1-Transformer-BNC.jpg
It has an additional winding for a 2nd Rx if needed, which can also be the soundcard input when using SpecLab for <24 kHz signals

Today I finally made the long overdue measurements with a vector network analyzer. That shows how the core performs, you can expect the same when using it as the balun at the antenna. Several years ago I replaced all my baluns with this core as it passes much lower frequencies than the torroid transformers that I used before. Along with the 1:1 transformer I now hear the 12-15 kHz Alphas with ease on my EWE. Of course on the Beverage these are much stronger.

The red line shows the insertion loss, the blue line shows the VSWR
http://dx.3sdesign.de/temp/BN73-202_1-to-1-Transformer-12-5000kHz.pdf

This shows that the core works well up to 40 MHz if you accept the 1.3dB insertion loss up there. Keep in mind that my main focus is to get the 10-100kHz range acrcoss. For higher frequencies (40+MHz) a different core material is needed.

Very good post, Jurgen, and visual proof that the BN-73-202 toroid is the go-to core for LF-Low VHF, and it is the recommended toroid by the top 160m band amateur dxers. Amateurs would use the 73-202 in a receive-only antenna and would employ a vertical or Inverted L for transmitting. It is an amazing little piece of ferrite as it is so small!

I am currently evaluating a balun made from the larger bi-monocular toroids which I picked up at a rally. It is annoying but I don't know what type they are but judging from the good response from LF to 26 MHz they must be type 31 ferrite.

My post on the baluns brought about the biggest response I have had on my blog so I'm looking forward to hearing how people get on with their BN-73-202 baluns. It's just a pity that TA DX conditions are so poor at the moment! I could live with that given the sun spot max but this maximum is also disappointing!

regards

Stuart

That should be easy to determine Stuart
Put a few windings on it, measure the inductivity and then enter it into

A very interesting subject. I have a selection of baluns at the receiver end of a 500m beverage, switchable and completely bypassable etc....

but during the SAQ broadcast the other day, the signal was only heard by by-passing the baluns. The transmission didnt last long enough to allow other tests.

They do have a possitive effect though at higher frequencies on mw....

So I watch this thread with interest!!

In that case your transformer is bad for LF.
I observed the same with my old torroids, and knew the beverage should have good signals. Then I measured the old balun and found the cut off freq somwhere around 200..400 kHz. So all the good transformer instructions in the internet just mislead me, and I from then on became suspicious of any other do-it-yourself instruction. Instead I measure myself and don't believe in others "results".

I then heard the SAQ signal, but the alpha's were still in noise. Eventually I found out that the noise came via the 30m feedline from PC-PSU and nearby 220V lines and coupled via the ground-rod into the antenna. So the DC path of the feedline had to be interupted, that is done by a 1:1 transformer. From then on I hear the Alphas, even on the EWE, which is far from optimal for LF

Also I built a mains filter into the PC-PSU cage, that was very effective for the LF range.
Along with the above I also found the ground-rod to soil resistance was too high. Thus a new & larger one was put in place

4308. Trans Atlantic DX

Yahoo group: skywavesmw
Date: 2014-01-05 01:36:07 UTC
From: <matt-44@...>
Topic: 4308 Message: 4308

Hello all, last night I heard the usual 1510 WUFC signal was ok, but lots of splatter from 1512, think that is Saudi?

I also heard for the first time Canda, VOCM 590, started with Country music then got a very clear ID, also with splatter from 594, which I believe is also Saudi!

Along with those I heard 930 which was playing Country along with something else fading around behind it, signal was not strong enough to get a clear ID and faded away by 01:00.

Anyone have any idea what two stations could have been on 930?

Cheers,

Matt.

Matt,

Saudi is heard on 1512, but I have also heard Greece with a strong signal
on there, but I'm not sure what the current situation is with Greek Radio.

Saudi is on 594khz, but the signal that I usually hear is Radio Sim
in Portugal.

930 was probably CFBC and CJYQ. Back when I first did Medium Wave DXing
(Too many years ago !), CJYQ was one of the most regular stations to make
it here, but since I restarted last year, I am more likely to get CFBC.
They don't seem to ID on the hour, but sometimes a few minutes after in my
experience.
I find 930 a bit of a puzzle. Most people report CFBC as a regular, but
despite no co-channel QRM and a fair sized carrier on the persus I find it
quite hard to get good audio, whilst just along the dial on 1010 CFRB is
booming in.

From: Jurgen Bartels
Topic: 4314 Message: 4314

My DX-guest recorded with 2 rx on my 320° and 260° beverages (300 / 450m) overnight
He caught a suprising opening around 0200-0300z to Argentina with among others on the 260°
1670 R. Rubi with clear ID

At the same time the 320° brought 1670-CJEU

Quite interesting to get both Americas at the same time.
So far with a single Rx I had to decide which antenna to record and did not expect that the other would also be useful at the same time

---
The tropical band from S.America also comes in well on the 260°, peaking at local sunset

This level-plot shows the grayzone effect quite well: (UTC+1)

Right !
I am happy to "out-source" that task (recording & listening) to my DX-guest, he already found some tx that I did not know of or hadn't paid attention to.

> Here in eastern Finland the night was rather poor, sunrise better.

Here it was the repat of 24h earlier, Argentina again, and from 0400-0700 strong US/CAN, among others Greenbay & San Antonio were quite strong.
But short after sunrise all went down.

Several times I found Finland / N.Sweden servers having TA signals much weaker than here. The other Rx in Europe aren't great either except the one near Amberg that is good for S.America but not for US/CAN (too far away from the coast)

From: <matt-44@...>
Topic: 176 Message: 4318

Hi all, the past few nights I have heard something on 1390, it seems to be talk but I can't get it clear enough for an ID, any help with this one?

The usual Boston 1510 coming through weak lately with splatter from 1512.

One thing that amazed me was Sunday night, VOCM 590 was very clear, in fact clear enough to use the 7khz filter on my Lowe HF 225 and give some beautiful audio, although I had to switch down to 4khz to remove the whistle that is always there!

Thanks and happy DXing all,

Matt.

That is a bit odd. I would have expected that it is a bit stronger up there.

OTOH I have not seen other Alaskans, not even 780 / 820 carriers that last
winter came along with 680.
Apparently only paths to N.Alaska exist.

Thanks for this Jurgen.

Last season CJYQ was one of the most dominant NA signals into London. This season it has been all but invisible along with CKNB on 950 kHz. Once again 1010 with either the Toronto or NY outlet, 1390 WEGP and 1510 WUFC Boston are the strongest MF DX this season into London, audible most evenings. MF propagation - completely unpredictable!

Regards

Stuart

Yesterday morning around 0800z 770-Calgary came in quite loud, first time this season.
This morning the US midwest came in well, lasted around 1000z

590-VOCM much weaker than usual due to the fire

Yes, good to see a return of decent conditions to the midwest. I'm still working through recordings but here are some of the stations heard so far. The AL station was a new one for me.

830 WCCO Minneapolis MN 0800
1360 WTAQ Green Bay WI 0800
1310 WCCW Traverse City MI 0800
1250 WSSP Milwaukee WI 0800
1150 WHBY Kimberly WI 0800
1040 WHO Des Moines IA 0800
1480 WLMV Madison WI 0900
1410 WNGA Mobile AL 0900
1310 WIBA Madison WI 0900
1360 WSAI Cincinnati OH 0900
1280 WNAM Neenah WI 0900
1480 WGVU Kentwood MI 1000
1390 WRIG Schofield WI 1000
1520 HJLI R Libertad, Bogota 0657
1250 HJCA R Capital Bogota 0700
1070 HJCG R Santa Fe Bogota 0700
1600 KPNP Watertown MN 0900

Paul,
Yesterday late morning I compared your rx with mine when signals were just fading here. It was interesting that you still had fair levels then.
The extra 900 km in daylight makes quite a difference.

Date: 02/02/2014
Time: 21:15 - 22:00 Local
Location: Home, Launceston Tasmania
Radio: 7.5" Loopstick Tecsun PL-380
Total stations logged: 85
New stations logged: 1
Furthest station logged: 1386 kHz - Radio Tarana (NZ) - 2430km

Notes: Last night for a bit of a change and due to the high temperatures (Still showing 33c at 9pm) I decided to take my UL radio outside for a bit of a listen around the bands. After finding a good spot on our front steps I hit my two test frequencies of 909 kHz and 1386 kHz which both showed some weak signals but nothing which was strong enough to copy at that point. I then started off at the bottom of the band and gave each frequency a good check including multiple times for some where signal levels were not very strong the first time around. My total loggings were around the average with only a couple of the normal stations not appearing at all or at very weak levels.
The only new station logged was 567 kHz - 2BH from Broken Hill. This was mixing with 4JK on the same frequency but I was able to null this out to get enough audio to log it.

From: <mcsporan@...>
Topic: 4340 Message: 4340

Hi All

Some great signals on MW this morning, mainly from the East Coast USA\Canada. I received probably my best reception of WARV on 1590khz. Also managed to receive a TIS station on 1710khz but I'm not sure if its WGFG689 from New Jersey.

The best signals were around 07:00utc and I noticed some good signals on my 02:00utc recording also.

Here is a YouTube video of my receptions http://youtu.be/Uv8AsISh-_Y
http://youtu.be/Uv8AsISh-_Y

Notice WUNR 1600khz the amount of bandwidth this station takes up !!

Also at the end of the video see my reception of the TIS on 1710khz you can hear the announcer saying "This is a Travellers Information Service Radio station Test Broadcast" And this was looping any ideas if it was WGFG689 in idle mode or could it be a new TIS ?

Hi All

I received the West coast again today...but only just conditions were pretty marginal with KOMO 1000khz and KKXA 1520khz fading in and out between 06-07 utc

I managed to get a personal first on 1410khz CFTE Team 1410 Sports Vancouver I got the ID at 07:00utc and within seconds it was gone in the mush of signals mixing so lucky with that...got the all important ID.

Mexico was in on 1470khz but other than that nothing much else

Here is an MP3 of how KOMO CFTE and KKXA were sounding this morning

Thanks for posting that Mark. I'm really jealous of those fantastic signals.

I think that I "may" have got KKXA a few minutes after 07:00. There was music deep in the noise and it was on the right offset, but I'll never know. At least it gives me hope that one day the signal will be that little bit stronger and my infernal local noise will be that little bit quieter. I'll get the west coast one day !

Simon

Nice catch.

I heard it about a week ago live in the morning, and used a remote rx in Vancouver / Seattle to compare. I did the same with other tx from that area, that's the most confortable & fastest way to ID. Just fade up the remote audio until you hear a slight echo.

Last week I also found on 590 (while VOCM was very weak)
CJCL SN590 The Fan, Toronto

The first time I heard on 590 something else than VOCM & WEZE

Thanks Jurgen,
Using a remote receiver is a handy way of checking I have done this myself also, the signal was marginal from CFTE just lucky the ID was at the peak.

590khz is one of those frequencies were I get spaltter namely from Radio Scotland on 585khz as im looking more or less at it...same as 810khz...VOCM comes in ok but so far have not received anything else on 590khz

Thanks Simon, It really helps when propagation is good...yesterday it was marginal wit lots of fading in and out easy to miss the all important ID....If you received country music on 1520khz there is every chance it could have been KKXA...but obviously cant be certain without an ID. Noise is a big problem for allot of DXers and with me I am a few miles outside the Border town of Hawick with only one neighbour my parents :) ...and I still get noise especially from electric fences ...I did notice once a strange noise on MW only on certain frequencies...I found by trial and error it was the HDMI lead from my monitor to the PC and by moving it down low the noise went away if it was up in the air it produced noise. It is a constant battle...another thing I noticed to reduce a little noise caused from my monitor was to dim down the brightness that also helped.

Cheers Mark

Oh yes I forgot that, I get R. Scotland here also, but not too bad.

Here's the clip, recorded in 2 modes
http://dx.3sdesign.de/unid/590-CJSL-140207.mp3

After Germany left 990 I hoped to have a clear channel but now suffering from
BBC R.Nan Gaidheal/BBC R.Scotland in Aberdeen. That sits just right in front of
my antenna.
Tx from England are well attenuated by the beverage (better than on my EWE)
since they come from the side. Only Scotland is a different story.

Yes. Also a possibility to define a range of dates would be useful. I
went back and found one logging made via my site and then it was easy.
I had been looking for this possibility, but didn't realise it was so easy.

It's funny, this morning I also was looking for the From-Date to Until-Date feature to find my logs. And of course I failed. Then I noticed the "Show his complete log" feature.

The only problem is the very slow build-up of the graphics.
~800 logs take a while to be drawn.

Maybe it more is Opera-releated?

Topic: 4354 Message: 4354

Over the past few months I have been looking for a program to log information on the various radio stations I hear using my ultralight radios.

After testing a few different programs and even trying to program my own from scratch I settled on using Access 2007. Below is a screen capture of my results so far.

I have also uploaded a blank database to the group which can be used for your own purposes.

4355. Ultralight DXing Report - Launceston Tasmania - 25/02/2014

Yahoo group: skywavesmw
Date: 2014-02-26 01:08:44 UTC
From: <tanger32au@...>
Topic: 4355 Message: 4355

Date: 25/02/2014
Time: 21:00 - 22:40 Local
Location: Home, Launceston Tasmania
Radio: 7.5” Loopstick Tecsun PL-380
Total stations logged: 119
New stations logged: 2. 585kHz - 2WEB / 675kHz - Radio NZ
Furthest station logged: 1296kHz - 6RN. 2768km

Notes: Last night’s session was very interesting with two new stations logged. Band conditions were an improvement on the normal for here and this meant that most stations received were producing very clear audio. 2WEB on 585kHz is only a possible as I had trouble nulling out other stations on this frequency but a name I heard matches up with information from the website. Radio New Zealand on 675kHz was a new logging and this raised out of the band noise and 2CO towards the end of my session around 22:30 local. Other New Zealand stations on 909, 1386, 1548 & 1602kHz were all received at good signal levels with 1602kHz being a real standout and only having slight mixing with another local station on 1611kHz.

4356. MW spectrum recordings of 1986 / 1991

Yahoo group: skywavesmw
Date: 2014-02-27 07:56:43 UTC
From: Jurgen Bartels
Topic: 4356 Message: 4356

Do you want to listen to spectrum recordings made in 1986 and 1991 ?
While SDR was still unknown 2 US DXers used a VCR for it.
Truly amazing how well that worked.
It brings back good memories
http://www.tophour.com/2014/02/23/unique-am-captures-from-1986-and-1991

Check the following audio clips made from the 1986 and 1991 videotape spectrum captures.

http://chowdanet.com/markc/dx_audio/id1_19860501_0500e.mp3
ID's 5 a.m. EDT / 0900 UTC, 1 MAY 1986 from metro-Providence, RI (Craig Healy VCR DX spectrum capture tape): WWKB-1520 NY, WTOP-1500 DC, WPTR-1540 NY, WQXR-1560 NY, WCAU-1210 PA, WRCP-1290 RI, WHIM-1110 RI, WHJJ-920 RI, WHN-1050 NY, WINS-1010 NY.

http://chowdanet.com/markc/dx_audio/id1_19910402_0500e.mp3

Thanks for this sad news Sleeper. How extraordinary, and so like the end of the Prague Spring on 20th August 1968, when for about a week the 45m band was full of little voices asking for the help of the free world, and all the international announcers of Radio Prague were doing the same via the main Liblice MW tx on 1268.
- Julian

I made a recording of what I received last night. The plea for help did sound a bit sarcastic & slightly OTT at times I thought, although lets hope it does not turn out to be more of desperation.

From: simbeav@...
Topic: 4361 Message: 4361

For anybody who hasn't heard this one before (like me :-)), KYHN was booming in this morning at 06:00 with a clear ID, although with qrm from the french maritime station.

An hour earlier the dominant station on this frequency was in french. No ID though. I thought I heard shalom, but not conclusive.

From: <tanger32au@...>
Topic: 4364 Message: 4364

http://ultralightdxing.blogspot.com.au/2014/03/ultralight-dxing-report-launceston_10.html

Date: 09/03/2014 - 10/03/2014
Time: 23:40 - 00:50
Location: Home, Launceston Tasmania
Radio: 7.5" Loopstick Tecsun PL-380
Total stations logged: 130
New stations logged: 3 - 828kHz Radio Trackside / 954kHz Radio Trackside / 1485kHz 5LN
Furthest station logged: 1296kHz 6RN - 2768km

Notes: Late last night / earlier this morning I had the opportunity to do a late night ultralight dxing session at home, this was due to not needing to get up early due to the public holiday today. My session started off at 23:40 and as always I did a check on my two New Zealand check frequencies of 909kHz and 1386kHz which both produced sound results, 1386kHz peaking at a very good signal level. Over the next hour and in to the early hours of this morning I logged 130 stations including two new New Zealand stations and 5LN from Port Lincoln on 1485kHz running just 200W, this was heard just before I ended my session.

Total stations logged for each area were:
ACT - 6
NSW - 52
QLD - 7
SA - 15
TAS - 12
VIC - 29
WA - 1
New Zealand - 8

Overall the band was sounding close to the best I have heard it with the latter time of this session producing must less domestic noise.

I took a video of some of the stations I logged which is linked below.

http://www.youtube.com/watch?v=gB74fNKNzHs http://www.youtube.com/watch?v=gB74fNKNzHs

4366. Medium wave Radio DXing Challenge 2014

Yahoo group: skywavesmw
Date: 2014-03-12 05:29:59 UTC
From: <tanger32au@...>
Topic: 4366 Message: 4366

I would like to propose a medium wave radio dxing challenge to run for the rest of the year. This is not a competition and it is not about beating anybody else except yourself, it is a trust based challenge and the rules are not too complex. I see it working along these lines.

- Each station you receive in each dxing session is scored based on the distance from your location to the transmitter; it does not need to accurate, only to the nearest 1000km. A number of good websites exist which can help with finding these distances.
The scoring table is:
0 - 1000km = 1 point
1001 - 2000km = 3 points
2001 - 3000km = 6 points
3001 - 4000km = 9 points
Over 4000km = 12 points

- You also receive a bonus based on the location of your medium wave dxing session. If it is a new location then you double your total score. Again this is trust based as to what counts as a new location. I would say a 1km radius around each location would be a fair guide. This is to encourage portable / mobile operation.

- Each location can only be counted once in a 24 hour period and the double score bonus only counts the first time you log from each location.

- Full logs do not need to be kept, just a total for each session (with location) and a running total of your score. A simple spreadsheet can do this.

- Any and all equipment capable of receiving the medium wave broadcast band can be used.

- At the end of the challenge I can produce certificates for each person who takes part.

I have created a page on my blog just for this challenge where progress scores and information can be shared:
http://ultralightdxing.blogspot.com.au/p/medium-wave-radio-dxing-challenge-2014.html

Any questions can be directed to me via email: tanger32au@gmail.com

Hi All

I have uploaded a YT video of CJRS 1650khz and KKLF 1700khz from the 12th March 2014. Received on the Super KAZ Array beaming 320 deg. Using my new Elad FDM-S2..Im still learning what this little box can do, and the software is continually being improved by the Elad team.

One thing I like already is the noise reduction on the Elad it actually pulls the signal out and makes the audio louder and cleaner...allot of noise reductions I have used in the past muffle the audio or make it sound like its underwater.

http://youtu.be/eGyqnDnBXsU http://youtu.be/eGyqnDnBXsU

Cheers

Topic: 4372 Message: 4372

http://ultralightdxing.blogspot.com.au/2014/03/ultralight-dxing-report-launceston_19.html
http://ultralightdxing.blogspot.com.au/2014/03/ultralight-dxing-report-launceston_19.html

Date: 19/03/2014
Time: 05:30am - 6:25am Local
Location: Home, Launceston Tasmania
Radio: 7.5” Loopstick Tecsun PL-380
Total stations logged: 115
New stations logged: 1 - 1215kHz - HPON, Bowral
Furthest station logged: 1548kHz - 4QD. 1995km
Medium wave radio challenge 2014 Score: 177

Notes: Following my success of yesterdays early morning Dxing session: (http://ultralightdxing.blogspot.com.au/2014/03/ultralight-dxing-report-launceston_18.html http://ultralightdxing.blogspot.com.au/2014/03/ultralight-dxing-report-launceston_18.html) I got up a bit early this morning and ran another session. It was very dark when I started and this helped me to log 115 stations including a new station on 1215kHz from Bowral New South Wales running 350W. Signal levels were an improvement on yesterday’s session and I was very impressed with the signal levels coming from New South Wales and Queensland and I was able to log 4 Queensland stations before the signal levels dropped off at sunrise.

Actually, I remember somebody in the MWC used to have a slightly curved beverage antenna. This apparently produced a wider beamwidth, though (I think) at the expense of a lesser rear null.

John

Good point, I had fogotten about that.
Deleted now

> Droitwich is off for maintenance most of this week btw

Now on air.
But audio in AM is very odd (sort of stuttering), while good in SSB

From: Julian Hardstone
Topic: 4386 Message: 4386

Apologies for replying to the group instead of privately to Jurgen; only the Droitwich news is of interest to the other members.

Droitwich 198kHz is currently 'off' but that leaves the two Scottish tx. I have heard that the other Droitwich services on 693 and 1215 are being transmitted from a temporary tx at Kenilworth and the carrier offset and audio delay can be heard at a distance. I don't know if the Kenilworth tx is at the Arquiva VHF relay site, maybe it is at a different location. I believe the temporary tx has a licence for 198kHz but that does not seem to be in use

- Julian

I have seen that the temporary tx is operated by Arquiva from Chase Farm on the other side of Kenilworth from the TV relay. I believe it is using 693, 1053 and 1215kHz with a satellite delay on the audio.

On 198 I am now hearing a beat of about 10Hz variable but I don't hear any delayed audio. Maybe Damien can comment from his qth near Droitwich?

- Julian (Stockport)

Here AM audio was OK, but SSB stuttering as normal with AMSS.
It seems to be back already now.

Of course the 'variable beat' is the PSK data modulation, which is usually audible only if you use AMSS, like Mauno. The main masts for the LW 'T' aerial are being painted and renovated, this will last for several months but the maintenance will be stopped during cricket matches so they can be broadcast on LW

I was using AM/AM synchro, which produces good audio, while SSB produces 'stuttering' audio due to AM signalling system.

4391. logs N.Germany 3-5 April

Yahoo group: skywavesmw
Date: 2014-04-06 08:48:00 UTC
From: Jurgen Bartels
Topic: 4391 Message: 4391

5-April
In the morning the TV-video on 33.17 got stronger, it's probably the same from Armenia that others observed around 41 Mhz but with audio

A real surprise was the Jap Fax at 20:58 (local), it lasted only for 2 bursts. At the same time the Brasil radar got strong, so I suspect it came in via the Pacific route. In the dark northeast path the foF2 values were way too low.

NYC taxis below 32 MHz lasted until 2330 local

Many thanks for helping:
Henrik, Mauno, Dmitry

Quite a few of harmonics were discovered the last days

Well I must admit, I missed the official statement, and only discovered it was off air, while driving the works van. At first I thought it was the vans radio playing up, as it was around 4pm, l was getting nothing, I got back in the van and Droitwich was back on. This went on for 3 days, until l read a post on the BDXC message board. I haven't been active this year, DX wise, l also have other interests and have just finished a 3 month project. Don't panic, I am not leaving the screen, l just have to juggle interests for freshness and sanity. I did try to monitor Droitwich's frequencies, but l'm at work during the down times, so know joy yet.

4393. Ultralight DXing Report - Launceston, Tasmania. 09/04/2014

From: <tanger32au@...>
Topic: 4393 Message: 4393

http://ultralightdxing.blogspot.com.au/2014/04/ultralight-dxing-report-launceston.html

Date: 09/04/2014
Time: 5:50am - 6:25am
Location: Home, Launceston Tasmania
Radio: 7.5” Loopstick Tecsun PL-380
Total stations logged: 75
New stations logged: 0
Furthest station logged: 612kHz - 4QR Brisbane. 1644km
Medium wave radio challenge 2014 Score: 89

Notes: This morning I was awake early so I undertook a pre-sunrise ultralight dxing session. Band conditions were very good with good to excellent signal levels from most stations. I did notice a number of NSW / SA stations mostly between 1000km and 1500km were missing and those just below this had much weaker signals than what I had expected. I did a quick check of my two New Zealand check frequencies (909kHz and 1386kHz), both showed some very weak audio peaking in and out of the band noise but not enough to be able to add them to the logs. I managed to log 75 stations total, a breakdown of these by state:
ACT - 6
NSW - 21
QLD - 1
SA - 6
TAS - 10
VIC - 31

Out of these stations, 4QR from Brisbane was a bit of a surprise and peaked with good audio towards the end of my session, right before sunrise. I suspect if I had of kept listen I would have been able to add a couple more stations but domestic duties and work meant I had to end the session, my plan for the future is to aim for some more sessions around this time of the morning.

Overall it was a very enjoyable session and a good use of having woken up early.

4400. GroundwavesMW bandscan.

Yahoo group: skywavesmw
Date: 2014-07-06 16:41:21 UTC
From: Martin Payne
Topic: 4400 Message: 4400

Hi list,

I did a South London groundwave reception bandscan today. I was using a Tecsun PL660 and a ~30 cm square loop antenna. I used MW List to get the TX locations, and I didn't wait to get an ID for the strong local stations.

There were very few surprises except for the absence of London Turkish radio on 1584. I can only assume they are having technical problems as they are usually strong here. One thing which always does surprise me is how BBC Hereford & Worcester is stronger than Radio XL. They are about the same distance away from me in approximately the same direction, but Radio XL runs 10 KW and BBC H&W runs a tiny 37 W. Perhaps the lower frequency helps, or maybe Radio XL has a directional antenna beaming away from me.

These are the identified stations:

549 Deutschlandfunk (Nordkirchen, Germany)

558 Spectrum Radio (Crystal Palace)

603 Smooth Radio (Littlebourne)

621 RTBF International (Wavre, Belgium)

630 BBC 3 Counties (Luton)

657 BBC Radio Wales (Wrexham)

675 Radio Maria (Lopik, Netherlands)

693 BBC Radio 5 Live (various)

711 France Info (Rennes, France)

720 BBC Radio 4 (Crystal Palace)

729 BBC Essex (Manningtree)

738 BBC Hereford & Worcester (Worcester)

747 NPO Radio 5 (Zeewolde, Netherlands)

765 BBC Essex (Chelmsford)

774 BBC Radio Kent (Littlebourne)

792 Smooth Radio (Kempston)

801 BBC Radio Devon (Barnstaple)

828 Smooth Radio (Luton)

837 BBC Asian Network (Leicester)

855 BBC Radio Norfolk (Postwick)

855 Sunshine Radio (Ludlow)

864 France Bleu (Villebon-sur-Yvette)

873 BBC Radio Norfolk (West Lynn)

882 BBC Radio Wales (Washford)

909 BBC Radio 5 Live (Brookmans Park)

936 Smooth Radio (Chippenham)

945 Smooth Radio (Bexhill)

963 Sunrise Radio (Lea Bridge Road)

972 Sunrise Radio (Glade Lane)

999 BBC Radio Solent (Fareham)

1008 Groot Nieuws Radio (Zeewolde)

1026 BBC Radio Cambridgeshire (Cambridge)

1035 Radio 1035 (Crystal Palace)

1053 Talk Sport (various)

1089 Talk Sport (Brookmans Park)

1107 Talk Sport (Duxhurst)

1116 BBC Radio Guernsey (Saint Peter Port)

1125 BBC Radio Wales (Llandrindod Wells)

1134 BFBS Gurkha Radio (Sandhurst)

1152 LBC News (Saffron Green)

1161 BBC Sussex (Bexhill)

1161 Smooth Radio (Blunsdon)

1161 BBC 3 Counties (Kempston)

1170 Smooth Radio (Portsmouth)

1170 Smooth Radio (Ipswich)

1179 Radio BGWS (Farnborough)

1197 Absolute Radio (Brighton)

1215 Absolute Radio (Brookmans Park)

1233 Absolute Radio (various)

1242 Smooth Radio (Hoo St Werburgh)

1251 Smooth Radio (Great Barton)

1260 Absolute Radio (Guildford)

1287 Hospital Radio Crawley (Crawley)

1296 Radio XL (Birmingham)

1305 Premier (North Looe)

1323 Smooth Radio (Brighton)

1332 Premier (Bow)

1359 Smooth Radio (Chelmsford)

1368 BBC Surrey (Duxhurst)

1377 France Info (Lille)

1413 Premier (Dartford)

1413 Premier (Heathrow)

1431 Smooth Radio (Reading)

1431 Smooth Radio (Southend)

1431 Radio Redhill (Redhill)

1458 Radio 1458 (Brookmans Park)

1485 Smooth Radio (Newbury)

1485 BBC Sussex (Brighton)

1503 Betar Bangla (Bow)

1521 RKNW (pirate - South West London)

1530 BBC Essex (Southend)

1548 Gold (Saffron Green)

1557 Smooth Radio (Northampton)

1557 Smooth Radio (Southampton)

1566 Eagle Extra (Guildford)

1602 BBC Radio Kent (Rusthall)

1602 Desi Radio (Glade Lane)

I also had a number of weak carriers which weren't strong enough to let me hear any audio:

540 carrier

576 carrier

585 carrier

612 carrier

639 carrier

666 carrier

702 carrier

756 carrier

810 carrier

828 carrier

891 carrier

990 carrier

1017 carrier

1071 carrier

1098 carrier

1134 carrier

1278 carrier

1341 carrier

1350 carrier

1386 carrier

1404 carrier

1440 carrier

1449 carrier

1575 carrier

1584 carrier

Does anyone else on the list have a groundwave bandscan to share? I find it quite interesting to see how far stations can reach without the help of the ionosphere, and it can be quite surprising how far some of the low power stations get out.

Regards,

Martin

Nice idea Martin, a nice job for a quiet summer afternoon!
The Ofcom Tx Params list shows that Langley Mill 1296, east of Birmingham, has a null of 20dB in your direction which should give you about 100W. I've not seen anything about London Turkish R from Lea Bridge Road, so your 1584 carrier is probably the sum of Clipstone 1kW plus Wooferton 500W, both omnidirectional

Hello Keith,

I'm not a moderator, but I'd like to welcome you to the group. Many thanks for sharing your experiences regarding DX.

I guess, as it's your winter time right now, you'll be getting good results on MW. Things are just getting going here, as we head towards autumn in the northern hemisphere.

Best wishes,

Chris Thatcher (Lincoln, UK)

Welcome to Skywaves Keith. Nice to have you aboard.

What a fascinating account of your DXing career. 100 Europeans in the bag too!!! Very nice. Oh yes, the days when MW was not overcrowded with stations. The band here is solid with European signals, but the main powerhouses are gradually closing down, one by one, resulting in a slightly clearer band. It's still nothing like the 70s though when European stations would stations used to close down for the night, leaving the band open to the Americas.

It's along time since I have heard that abbreviated word "Verie" too. It took me back to my QSLing days. I am not much of a QSLer now, hardly ever writing a report, but I have a few medium wave QLSs from the 70s and 80s.

Looking forward to reading you reports.

John

4412. Back in MW business at the new QTH

Yahoo group: skywavesmw
Date: 2014-08-25 08:43:17 UTC
From: John Faulkner, Skegness
Topic: 4412 Message: 4412

A very disappointing start to this year's MW season here, but that's probably not surprising because of the bumpy figures we had a few days ago.

I installed a flag antenna yesterday, the first one at the new QTH and I am pleased to report that there was no obvious electrical noise on completion of this just before 20:00 yesterday evening. I have a -125dB background noise figure which has dropped to -130dB as I type. This is VERY quiet and there is currently no need to use any ferrite chokes, as there was at the last address. However, noise levels did increase for a time around 0500, up to -110dB but thankfully did not last long.

My flag is pointing at 28 degrees, straight at Japan, and that might explain why there was nothing heard from North America. Not even the regulars were heard, though I noted a strong carrier just below 1500 kHz which will probably be Radio Santa Rosa from Peru.

I hope to make my flag movable to some degree so I can swing it around more for North America, but (very) the close proximity of a noisy telephone cable may put a stop to that.

Going back to yesterday evening, China was good on 1521 kHz just before 2000. The signal was actually stronger than my local BBC Radio Lincolnshire on 1368, though the latter has never been a particularly strong signal here.

Here's hoping we have an improving season and I look forward to reading everybody's logs.

Good DX all!

John

Very nice! :O) I was looking for something like this for band 2, not that I will be able to afford one in a hurry. Is the S2 the new one which does band 2?

Fingers crossed for something from the far east this afternoon, but I don't know quite what to expect at this time of the season.

Good DX!

Hi John,I made the decision to sell off my Winradio G33DCC a few months back after reading positive comments about the SDR.
The G33 was a superb SDR, howeve ar total overkill for my needs, MW TA DXing and occasional trip round the HF Bands.
There are a few MW Perseus users, that have gone over to the S2, but saying that, there are a few that have purchased the S2 and prefered the Perseus.

Like all SDR's, once you get used to the GUI and little qerks, it preforms really well. And in regards to FM Band 2, it's excellent, and possibly par with your Sony XDR,although I don't own a XDR anymore to compaired directly, I caught my 1st french FM station on 93.50Mhz this morning with a brief peak over a Radio 4 TX.

The Negatives, the S2 seemed to be pretty sensitive, and dislikes strong signals. There is a chap on the Elad forum, saying he is getting ghost images on his S2 from MW using a Wellbrook ALA1530,it's probably not a issue if you are using a passive antenna.
Myself I had really bad overload on Band 2 when I connected my Blake FM8 antenna up, my soultion was to purchase a cheap 0 to -20dB attenuator, and just adjust,until overload is gone. I'm guessing this would work also with the Wellbrook problem.I used to get really bad overload form Droitwich, but a Combo of Nulling and using a Phaser has sorted this out
Can only tune in 10Hz steps, I'm sure this is software related at the moment
You will need a pretty modern i5 or i7 PC to capture 6Mhz of bandwidth

The Positives, Superb AM audio that betters my G33, more analog sounding. Fantastic Noise Reduction Filter, that seems to be amazing on speech, almost a cross between a audio compressor, and a Dolby Noise Reduction.
Great Waterfall display,
Once you sort your the overload issue's out, a great DX machine.
Tiny and Portable, and runs off PC's USB.
Pro active company that seem to listen to customers suggestions, and offer fairly regular software updates.

It's still early days for myself with the S2, and I believe there is a used one up for sale on The Elad Yahoo User Group, from what I can gather, most of the users of the S2 are Hams, rather than SW/MW/FM listeners, when you consider I sold my G33 for £1000 and then purchased the S2 for £479, it's seems I haved bagged a bargain.

Let's hope for a good season John, it may well be worth joining the Elad group, so you can weigh up, your view s on purchasing a S2.

I may have spoken too soon about the noise. I now have noise down to -100dB this afternoon - and this is with a ferrite choke inline. The ferrite choke is 15 turns of RG174 wrapped around a ferrite ring.

I haven't traced the source of this noise thoroughly but it does not appear to be coming from this property. Since it is raining I wonder if this might have something to do with it.

I also find that when anything electrical is switched on or off, Perseus locks up. Even switching a light on and off causes Perseus to crash, so I have to re-start Perseus. After so many times of this happening the Perseus software just won't fire up. MESTOR cannot find Perseus either. It is then necessary to re-start the computer, which rectifies the problem.

Oh well. Nothing is ever straight-forward.

John

I meant to add that the noise spikes look exactly like a switched mode psu on the Perseus display. It sounds like one too. There is a peak in the middle of the band where the noise backs down to -130dB but -100dB is strong enough to obliterate weak signals

http://www.mediafire.com/listen/zgybcj4vx5hpc07/2014-08-25_215945_220015.wav

Further to my last post, I said I would upload a file if I heard anything of interest. I can't say conditions are anything to write home about, but I thought I would record the top of the hour at 22:00 and heard one or two surprises. I can hear Chinese domestic time signals on 981 and 1359. Arabic stations seem to be plentiful too. But is that All India Radio I hear on 1566? It's all nice and early in the season for this. The band is pretty quiet in this recording too, unlike this afternoon. I hope that noise isn't going to be a regular thing.

Weather permitting, I will try and get the flag positioned towards 320 degrees tomorrow.

Good DX!

John

Hi Chris.

Just replied to you personally. Have you been having problems posting?

For the benefit of others, Perseus files have a wav suffix but they are not traditional wav files. You need HDSDR to play them. www.hdsdr.de I think there are other options too if anybody wants to throw other players in.

Cheers

John

I would recommend SDR-Radio. It's complicated but very good. HDSDR will get you started and it has nice clean audio - better than when using the Perseus receiver.

Stuart - how versatile is SDR Radio with Perseus files, compared to HDSDR? Does it let you do more useful things like looping audio, etc.?

I don’t know to be honest – Jim is the sdr-radio guru.

I find sdr-radio to be very heavy – ask Jim for his gui file which makes it much more usable IMHO. Should be shipped with the executable.

4427. Chinese 1098 last night

Yahoo group: skywavesmw
Date: 2014-08-31 14:53:02 UTC
From: John Faulkner, Skegness
Topic: 4427 Message: 4427

I have been receiving a Chinese station on 1098 for the last few nights and I finally heard a "Beijing ... " ID yesterday evening at 19:00 and 20:00.

Recording here: https://app.box.com/s/7uze7gir9f00336dw976

The signal was quite decent at times but faded frot he ID on the hour (of course!).

I presume the IDs beginning with "Beijing ..." are CNR1, but I am unsure if other networks use this ID. Or would this be CNR11?

The question is, does anybody know which is/are the most likely site/s for 1098?

You can also hear the sixth pip of another Chinese station under this.

Thanks

John

The signal was quite decent at times but faded frot he ID on the hour

(of course!).

I presume the IDs beginning with "Beijing ..." are CNR1, but I am unsure

if other networks use this ID. Or would this be CNR11?

The question is, does anybody know which is/are the most likely site/s

for 1098?

You can also hear the sixth pip of another Chinese station under this.

Thanks

John

Hi Matt.

Yes, using the Perseus and a flag antenna pointing at 28 degrees.

The Perseus is a very capable SDR but I would give more credit to the antenna. Flags offer fantastic broadband nulling and have low angle reception characteristics, similar to a beverage. I would recommend one where space is limited, as it is here. I used to use a ewe antenna, very similar in design, but the flag has much better directivity.

The flag antenna 'original' design (there are all kinds of variations of this antenna) is 10 x 25 x 10 feet. They are usually very quiet antennas. If the noise is being received by the antenna then there's not a lot you can do about it, but if the noise is somehow being carried along the outer of the coax then a simple RF choke can be used. Just insert as many turns of RG174 inline with the existing coax, wrapped around a ferrite ring (I get about 14 or 15 turns max) and this literally removed some dreadful S9+10 noise levels at my old Nottinghamshire QTH.

Those Wellbrook loops are excellent. I used to have one. But the loop has a figure of eight pattern whereas the flag is unidirectional.

I have some noise here unfortunately, picked up by the antenna, but it's intermittent and not too bad at about S3 to 4.

A few more Chinese stations received again this evening at 20:00: 567, 738 x2, 981 x3, 1305 x2, 1359, 1377, 1539 & 1593.

4434. 1521 Observation. Asiatic DX Recordings?

Yahoo group: skywavesmw
Date: 2014-09-01 23:01:25 UTC
From: John Faulkner, Skegness
Topic: 4434 Message: 4434

At 21:00 this evening I heard a mystery time signal underneath China on 1521. It sounded like a typical TWN/KOR/J time signal and this is the first time I have heard it on 1521. A presumed HLAZ was coming in on 1566 at the time and exhibited the very same time signal. So I am curious. I wonder if Radio Taiwan International have re-activated their Changzhi transmitter. I don't see any Korean stations on 1521 and the only Japanese stations listed are 1kW or less. There is also a 10kW Thai station on 1521 but the info I have states that they sign off by 1800.

Identifying Asiatic stations from their time signal might not be the best idea, but these can be a big help in knowing what might be coming in. I need to hear more than just time signals to be certain, so last season I was lucky to get hold of a few Asiatic DX SDR files which told me a lot about what I should be listening for in the way of IDs. I just wish there were more Asiatic DX recordings so I can compare my own reception. Does anybody know if there is an archive of Asiatic medium wave DX recordings?

Good DX!

John

After some research it seems that my presumed ID on this other CNR recordings is in fact a standard time announcement and not a station identification. According to the information at http://www.dxing.info/articles/identifying_Chinese_radio_stations.dx, the ID comes after the time announcement. I have no doubt that this is Golmud though as it's the only high powered transmitter from China on 1098 and it's become something of a regular.

Take 1359 yesterday evening though. How many Chinese time pips can you hear?

https://app.box.com/s/e7582mv6k1cok5lqo6nz

Definitely three, but possibly four? Difficult to know for certain but the Chinese transmitters on 1350 are only 10kW or less. Now then, which transmitters were received in this clip? There are 68 to choose from! In other words, it is probably not possible to ever know.

4440. Re: [skywavesmw] Golmud 1098 this evening

Yahoo group: skywavesmw
Date: 2014-09-06 11:58:48 UTC
From: John Faulkner, Skegness
Topic: 4436 Message: 4440

Hi Matt.

No question about it.

When you DX from a coastal location you have a reception advantage in that general sea direction. The sea path gives an enhancement. It would be the same for reception of the Americas if you live on the west coast of the UK. Actually, North American reception can be surprisingly good on the east coast when the northern path opens up, allowing reception of west coast North America and Alaska.

Look for China Radio International on 1521 from about 1900. It fades in here around 1800 but is usually weak at that time. At this time of year 1900 is the earliest time when you should get a decent signal. When you have bagged this one, look for those distinctive Chinese time pips on frequencies like 738, 981, 1098, 1359 & 1539.

Here is a recording of 1521 last night from 1859 and 30 seconds.

https://app.box.com/s/mr1z3ag5gw7w951fbkil

It should be an easy one to get. This was a genuine S9 signal at the time. It is usually audible on the car radio here.

CRI on 1521 is mostly in Russian. If you hear an Arabic station underneath, it will be BSKSA-1 (Broadcasting Service of the Kingdom of Saudi Arabia first programme) from Doba in the east of the country.

Don't forget, a flag antenna has two big advantages over a loop. 1. The lower angle of reception, thus allowing the DX to roll in from further afield. 2. The flag is unidirectional, whereas the loop is bidirectional, so interfering stations might come in 180 degrees from the direction you are trying to receive.

Cheers

John

Yahoo group: skywavesmw
Date: 2014-09-06 19:14:30 UTC
From: Matt .
Topic: 4436 Message: 4441

Hi John,
Yes you are right here, I have received 590 VOCM, Bloomberg 1130, 1390 WEGP, 1510 WUFC and 1520 New york. Now I know these are all usual and classed as "easy" dx targets to most dxers, but to me I was amazed when I heard Trans Atlantic dx.
I actually remember hearing 1521 China when on holiday in Norfolk as I recognise the tune that is also used on 1440 at 19:00. Not heard any of the other frequencies but I will definitely try them. I also know about 1521, they use crazy power, and their tx on 1440 often interferes with RTL 1440 much to my annoyance.
Great reception on the recording there, the Perseus really is a great piece of dx kit, I love it!
Thanks for all the info, perhaps one day I will be using a flag antenna along side my Wellbrook loop.
Best regards,
Matt.

Hi John,

That's crazy that you get China on MW, given that I am on the East coast just like you, do you think that I would be able to hear China too with my wellbrook loop? I remember hearing it on 1521 but I know that's crazy high power!

Regards,

Matt.

Subject: Re: [skywavesmw] Golmud 1098 this evening

After some research it seems
that my presumed ID on this other CNR recordings is
in fact a standard time announcement and not a
station identification. According to the information
at http://www.dxing.info/articles/identifying_Chinese_radio_stations.dx,
the ID comes after the time announcement. I have no
doubt that this is Golmud though as it's the only
high powered transmitter from China on 1098 and it's
become something of a regular.

Take 1359 yesterday evening though. How many Chinese
time pips can you hear?

https://app.box.com/s/e7582mv6k1cok5lqo6nz

Definitely three, but possibly four? Difficult to
know for certain but the Chinese transmitters on
1350 are only 10kW or less. Now then, which
transmitters were received in this clip? There are
68 to choose from! In other words, it is probably

not possible to ever know.

John

4443. Unidentified 1404 Yesterday Evening

Yahoo group: skywavesmw
Date: 2014-09-07 09:42:41 UTC
From: John Faulkner, Skegness
Topic: 4443 Message: 4443

This is a tricky one as I don't want to fill up the group's messages with recordings of time signals, but I hope you see where I am coming from with the following.

I recorded a time signal on 1404 kHz at 1900 yesterday evening, one I have not heard before. I don't think it emanates from Europe, but very likely the far east. Now I know what some of you will be thinking, that time signal is just that, a time signal! Correct! It is not an ID and never will be, but this has alerted me to something unusual and something which could (hopefully) be quite exotic. JOIF 1413 was coming in at the time too.

What makes this time signal interesting is that I have heard it on Finnish DXpeditions SDR recordings, but even on those it was never strong enough to hear any vocal ID.

The possibilities are interesting on 1404, including stations from Indonesia, Japan, Korea, the Philippines, Thailand and Taiwan, all typically in the range of 5kW to 10kW.

I still have a lot to learn about Asiatic DXing and getting to understand the identifications, but when I discover an unusual signal like this I know there something which needs closer investigation.

Here is the time signal from 1404 yesterday evening. It's very weak of course and at the end of the recording I have used paragraphic filtering to progressively boost the frequency of the time signal and cut back the rest of the audio. https://app.box.com/s/1tsea3v2vxn0wni2pfxe

It is my aim to build up a library of station IDs from the far east so I can compare my own recordings and know for certain what I am listening to. YouTube seems to offer lots of such recordings, plus there are a few on other DX sites. I still haven't found out who my 1404 could be so I am open to suggestions. I now wait to see if this signal returns with a stronger signal so I might actually hear vocal content.

Good DX!

John

Yes I knew about that and that is how I recognised the theme song of China radio. I listen to 1440 regularly and I know they carry China radio.
Here is a recording of China 1521 I just made, the signal was strong right till 7PM and then it started fading away, with Saudi fading in, also Saudi is almost impossible to null out.

Golmud carries CNR11 in Tibetan between 2155-1605. Your clip is in Standard Chinese and after Beijing time announcement you have a quick ID: "Zhongguo zhi Sheng" i.e. Voice of China i.e. CNR1. The long ID follows usually a bit later, about 45 seconds past the TOH. But you are right about the site: it seems to be the Golmud hight power one. I could confirm from last year's clips, that it switches from CNR1 to CNR11 exactly at 2155. It seems to sign on at 1840v, sometimes with Dragon Dance music until 2025, which is normal CNR1 MW s/on time and sometimes goes directly to CNR1 relay. It is on between 1900-2200 obviously only to jam RFA from Taiwan.

Thank you Mauno.

I don't like to guess the transmitters but I am almost 100% certain that this has to be Golmud. The high power and reception now every evening alone suggests this.

Interesting how conditions are better this season. I don't know if this is due to the new QTH or just because conditions are simply better/different, but I am hearing multiple co-channel Chinese time pips on several frequencies now.

The mystery time signal on 1404 was in again this evening. JOIF was also in. Plus a nice signal from HLAZ on 1566 which I will post tomorrow.

Cheers

John

4453. Matt's 981 kHz

Yahoo group: skywavesmw
Date: 2014-09-08 08:50:45 UTC
From: John Faulkner, Skegness
Topic: 4453 Message: 4453

Hi Matt.

First of all, just needed to change the title of the post as all the recent posts would have been threaded to my Golmud post. Best to keep things on topic.

The music would suggest a station from the Middle East. I think Iran is the usual suspect on 981 but I may be wrong. Algeria, Egypt and Saudi Arabia also use 981. Definitely no Chinese pips heard.

For future reference. Not sure if you are aware of these:

EMWG - Medium Wave 531-1098 kHz: http://www.hermanboel.eu/en-emwg-mw1.htm
EMWG - Medium Wave 1107-1700 kHz: http://www.hermanboel.eu/en-emwg-mw2.htm

I wonder if people are aware there is a medium wave equivalent of the FM List at: http://www.mwlist.org Just thought I'd mention it in case.

I will upload a recording or two of of my band from yesterday evening.

Cheers

John

4454. A couple of Perseus SDR files from 2014-09-07

Yahoo group: skywavesmw

From: John Faulkner, Skegness
Topic: 4454 Message: 4454

As promised, here are a couple of Perseus SDR files from yesterday evening:

http://www.mediafire.com/listen/j0muasivoh3ar1y/2014-09-07_175945_180015.wav

http://www.mediafire.com/listen/xyrqufo9ro9zci7/2014-09-07_185945_190015.wav

These are top of the hour recordings (15 seconds either side of the hour) across the whole of long and medium wave, made at 1900 and 2000 GMT.

HLAZ on 1566 increased to good levels a few minutes after 2000 and took over the channel. There is a clear ID in the 2000 recording.

Don't forget, if you don't have Perseus you can play the files back with the free HD SDR, available from www.hdsdr.de

Good DX!

From: Mauno Ritola
Topic: 4436 Message: 4457

Well, it could have been an unlisted high power site in the east to jam RFA, but I am sure, that it is Golmud, from where this jamming comes. A very strong audio came from the same carrier, when going over from CNR1 to CNR11 at 2155.

Do you have JOIF with audio? Here I haven't yet heard it this season: Vesti FM from Grigoriopol blocks the frequency completely.

Mauno

Hello Mauno.

I have heard what I presume is the time signal from JOIF a couple of times. It's never strong enough to hear audio however. That final pip really penetrates the noise.

John

Topic: 4459 Message: 4459

HLAZ was a good signal again on 1566 this evening at 1900 so I checked for other Koreans. I could hear presumed HLCA behind Germany on 972 and HLSR on 1170.

Two I am keeping a close eye on are 774 and 1404.

This all seems very early in the season, but the greyline is right for the time I heard these signals.

In only two weeks of getting back into medium wave I am already seeing a big difference in the fade-in times of Urumqi 1521. It's in at 1700 now whereas I was waiting until 1900 two weeks ago.

John

4460. Skegness Log: 09-09-14

972 2000 KOR HLCA KBS Hanminjok Bangsong 1, Dangjin (ccg) Time signal, piano music and ID. Almost equal strength Germany Weak 8740 km
1170 2000 KOR HLSR KBS Hanminjok Bangsong 2/KBS World Radio, Gimje=Kimjae (jeb) Time pips, piano music, etc. as 972 Weak 8863 km
1413 2000 J JOIF KBC-Kyushu Asahi Hoso, Fukuoka (kyu-fuk) Time signal. Possible KBC vocal ID in pile-up Weak 9225 km
1566 2000 KOR HLAZ FEBC, Jeju=Cheju (jej) Full ID. Clear. Good signal! Good 9067 km

Tonight's Asiatic reception was better than I had expected. Some decent signals, particularly from HLAZ which was blasting in: https://app.box.com/s/0pz460c1dlqt92p9kk6z

Also heard clearly was Kuanghua Zhi Sheng on 981: https://app.box.com/s/h1n9wi4fd8de7z9tc9lo

Much weaker, two Koreans made it through - 972 HLCA and 1170 HLSR, both carrying the same programme which helped me identify them: https://app.box.com/s/tkpsbqyxo2ve99motnlk and https://app.box.com/s/3tx85ij99vvq4k6nkbss respectively. The time signal gives it away but you can hear the presenter in the 972 kHz (first) recording.

1359 had the usual Chinese pile-up, but busier than I have heard before: https://app.box.com/s/a0zy30kn3ng30h223oql This even surpasses last season's BOG DXing! I presume this is a CNR1 ID, but I don't know for certain.

Finally, a mystery time signal on 738, also heard on a Finnish DXpedition file: https://app.box.com/s/sk80kwuf44f2isevaesw It wasn't strong enough to identify there either, but maybe somebody knows who this is.

This season is really taking shape!

Good DX!

Hi John and all,

Nothing here yet on 972 or 1098, but Korea well audible at 2002 UTC in Korean !
The main hindrance here is the Hindi station in the Netherlands but it fades away, Jeju gets loud and clear, this is my first Korean reception on MW and the video will be posted shortly.
Cheers and thank you for pointing at this early season's start, I wouldn't have tried if you hadn't published your dailies.

Hi Steve.

No pre-amp in use. Just the standard sized flag antenna, 10 feet x 25 feet. I understand there are pre-amps available but they would probably amplify the noise as much as the signal. I have a degree of noise here but it's not too bad and tends to appear in the late afternoon / early evening.

Thanks John. Your system sounds as if it is skynoise limited so thought for sure you were running a preamp...perhaps it was not a noisy evening in the Korean video. I'm really surprised to hear such good sensitivity on the bare antenna!

Steve / cheers

It's a pretty quiet location on the whole. A previous address had a severe S9+10 growl across the band which turned out to be an outside security light where the coax ran past. Two chokes inline with the coax removed 95% of the noise and enabled me to DX again. One was insufficient but cut most of the noise. The noise was being carried along the outer of the coax.

At the new QTH, my noise is just about non-existent in the daylight hours, but is 'switched on' sometime in the afternoons and remains on for the rest of the evening and into the early hours. Probably TVs. It's not too bad on the whole though and only masks the weakest of signals. I will record a Perseus file to show this. Inline chokes make no difference, indicating that the noise is being received by the aerial itself.

If you have played back my Perseus files Steve you will see first hand the extent of any noise problems here.

Conditions were not good at all yesterday evening. All far east signals were much weaker than usual and in view of tomorrow's predicted G3 solar storm conditions could be disturbed for some time.

Good DX!

John

There is a greyline between here and Japan around 2000 which is probably what's been responsible for the reception. The greyline between Holland and Japan is about 30 minutes earlier, that's all. So try between 1900 and 2000.

I don't know how the current wave of solar disturbances will affect this but I can still hear an occasional Japanese time signal on 1413, not including yesterday evening when Asiatic conditions were poor. My reception was better a week or more ago when the greyline was slightly better positioned.

Good DX!

Thank you Mauno.

Perhaps there is just one station after all, but I thought the flute after the time pips was a different station. I am pretty certain that the time pips do not belong to Egypt. It's too weak to go on anyway.

Incidentally, I could hear the time signals from Japan on 1350 and 1413 2000 and 2100 this evening. HLAZ was also very good on 1566 at 2100, indicating improved conditions.

Hopefully something interesting will come though over the next few days now that geomagnetic activity has passed.

Good DX!

I checked again, comparing to my own recording at 2000, and there is something in the beginning, but too hard for me to tell what. Egypt time signal seems to be 45 seconds late, that fooled me first. Here i had very weak North Korea IS just before TOH.

North Korea? Fantastic Mauno! I would like some of that here. :O) I wonder if that was the time signal I heard.

Do you know of any websites where I can hear recordings of Asiatic MWDX? Comparisons would be so useful. www.intervalsignals.net is OK but mostly deals with older short wave recordings.

What would be very useful would be to hear some SDR files of Asiatic DX. I have a few from Lars in Sweden but they contain North American DX more than anything else. Better still, do we have any members in Asia with a Perseus or other SDR receiver?

Thanks again.

John

4481. Re: [skywavesmw] 819 UNID

Yahoo group: skywavesmw
Date: 2014-09-16 15:29:10 UTC
From: John Faulkner, Skegness
Topic: 4476 Message: 4481

I just found a recording on youTube of KCBS on 819.
https://www.youtube.com/watch?v=RlQ1gNQYUkI

After comparing this with my own recording I can hear that the time signals are identical. If you have a musical ear you will hear that the fourth pip is also very slightly flat, giving it quite a distinctive /signature/. I have no doubt that my recording is North Korea. Then I looked at the transmitter power. It's listed with 500kW !!! I will log this as 'presumed' but I think there is no doubt that what I heard was the KCBS time signal. I just need a bit more signal next time to catch the vocals.

I made a recording of the YouTube video and my recording of the time pips, side by side: https://app.box.com/s/n1bjxxd1z865zug7qoo9

Thanks again Mauno.

John

4482. Skegness Log: 15-09-14

Yahoo group: skywavesmw
Date: 2014-09-16 16:18:23 UTC
From: John Faulkner, Skegness
Topic: 4482 Message: 4482

819 2000 KRE KCBS Chosun Jungang Pangsong, Pyongyang (pyo) Presumed
but based on time signal alone
My recording: https://app.box.com/s/5t8i4x6j1cnc2mj0828v
Compare with this:
https://www.youtube.com/watch?v=RlQ1gNQYUkI. The time
signals are identical.
V weak 8493 km **

1350 2000 J JOER RCC Chugoku Hoso, Etajima/Okimi (chg-hir) Distinctive
time signal equal weak co-channel pile-up.
V weak 9252 km

972 2058 KOR HLCA KBS Hanminjok Bangsong 1, Dangjin (ccg) Equal and
perhaps even slightly stronger than Germany
before the hour Good 8740 km

1413 2100 J JOIF KBC-Kyushu Asahi Hoso, Fukuoka (kyu-fuk) Distinctive
time signal still piercing through the pile-up.
Weak 9225 km

1566 2100 KOR HLAZ FEBC, Jeju=Cheju (jej) Stunning S7 signal Fair 9067 km

** Personal Skegness 'First'

A new country for me today on medium wave. North Korea! It's almost
certain, but I am basing my logging on the time signal alone. I really
need to get a better recording of this but, after hearing a recording on
YouTube of KCBS 819. https://www.youtube.com/watch?v=RlQ1gNQYUkI and
comparing this with my own recording I can hear that the time signals
are identical. If you have a musical ear you will also be able to tell
that the fourth pip is very slightly 'flat', giving it quite a
distinctive sound. I will log this as 'presumed' for now but I think
there is no doubt that this is the KCBS time signal on my recording. I
just need a bit more signal next time to catch the vocals.

I made a recording of the YouTube video and my recording of the time
pips, side by side: https://app.box.com/s/n1bjxxd1z865zug7qoo9

Here is South Korea making a mess of Germany on 972:
https://app.box.com/s/n1bjxxd1z865zug7qoo9

Good DX!

Hi John,
for comparison have you tried the various web receivers? For example via the Japanese Perseii you can hear quite a few Korean stations.

My knowledge on the whereabouts of web receivers is very limited. I will look into this. Perhaps you know the best places to look?

What would be better would be a Perseus file of the tops of the hour from such a location, then I can check all the band.

Thanks

John

I never thought of that. Cheers Stuart.

Sounding slightly negative - I hope it works. Perseus software has been unreliable on this computer (Windows 7). I have to use MESTOR to make all my recordings.

Due to the way the Perseus Client/Server software works you have to forward udp traffic on port 8014 (by default) in your router to the PC running the Perseus software. Otherwise you will see the Server but hear no audio.

North Korea? Fantastic Mauno! I would like some of that here. :O) I wonder if that was the time signal I heard.

Do you know of any websites where I can hear recordings of Asiatic MWDX? Comparisons would be so useful. www.intervalsignals.net is OK but mostly deals with older short wave recordings.

What would be very useful would be to hear some SDR files of Asiatic DX. I have a few from Lars in Sweden but they contain North American DX more than anything else. Better still, do we have any members in Asia with a Perseus or other SDR receiver?

Thanks again.

Perhaps there is just one station after all, but I thought the flute after the time pips was a different station. I am pretty certain that the time pips do not belong to Egypt. It's too weak to go on anyway.

Incidentally, I could hear the time signals from Japan on 1350 and 1413 2000 and 2100 this evening. HLAZ was also very good on 1566 at 2100, indicating improved conditions.

Hopefully something interesting will come though over the next few days now that geomagnetic activity has passed.

Good DX!

This needs to be configured asap as it could be very useful. I wonder if I will be able to run this on my Perseus while Mestor is recording? I suspect not.

I always use two Perseus software instances (and two sessions of JB's StationList): one for local listening & recording and another for remote listening and playback of recordings. Just assign the map for 2nd session as "Perseus Server Map #2".

From: John Faulkner, Skegness
Topic: 4476 Message: 4493

This is going to be a learning curve and I fear I might need more help than most. Computers and me don't get on too well these days. This might have to wait a day or two but I will hopefully make some inroads soon.

Having two instances sounds very useful. Something else I didn't know was possible.

Thanks for the tips.

John

4494. Korean time beeps

Yahoo group: skywavesmw
Date: 2014-09-18 05:34:25 UTC
From: pedrozimpala2
Topic: 4494 Message: 4494

hi

a disappointing evening : weak Korean time beeps on 1566 at 2000 UTC (with the last one slowly fading out), nothing on 1413 khz where Moldova and Spain were competing with the occasional input of Premier Radio UK, so that I doubt I will ever get Japan on that qrg;

As for 972 khz, Hamburg had a football match, and they were deafening !

I'll try again tonight.

Pat

Hi

HLAZ 1566 was strong last night past 20h UTC (on my Icom R75 + ALA1530 indoors) so I gave it a try on my ultralight receiver : Tecsun PL380 barefoot (inner ferrite)

and guess what, at the first fade-out of the Dutch Vahon-FM , the Korean Christian preacher was there, so I guess it's my new Ultralight record at 8291 kms !

Also AIR Rajkot is again audible on 1071 khz below Iran.

Payam Tehran comfortable on 1188 khz at 2100 UTC;

Hi

I tried a first T/A session at around 0500 UTC from here in Northern France (JN19bk) and there were only 2 stations : a loud enough talk station on 1510 khz (used to be WWZN Boston) and
a much weaker one on 1520 khz that should be Buffalo,NY.
Other likly channels such as 780, 1050, 1400 khz were mute, and so were the 9 channels of the X-band.
But that's a start, isn't it ?

From: BEAVAN SIMON
Topic: 4502 Message: 4502

Unfortunately I hadn't cleared my hard drive down and all my recordings lasted about 1 second ! But I reset just before going to work and top of the hour at 06:00 provided quite a few strong stations.,

Especially pleasing for me was a clear ID of ZNS Bahamas on 1540. I'm sure I've heard this before, but have never logged it as I've never heard an ID, with our friend CHIN, WDCD and KXEL dominating. Well it can go in now. Here's hoping things are looking up.

Simon

4504. A Non Event!

Yahoo group: skywavesmw
Date: 2014-10-04 08:03:26 UTC
From: John Faulkner, Skegness
Topic: 4504 Message: 4504

I started my overnight recordings just after 0000. I was unaware that a recording became corrupted (whines all over the place and no proper audio) by 0038. A few minutes after this, Mestor crashed and that was the end of the session. :O(

This happens a lot as my Perseus is prone to interference from electrical spikes. Something it has never suffered from until a few weeks ago. There's no telling when it will crash and I try to ensure that nobody throws a mains switch while I am recording. I intend to buy one of those anti-spike mains suppressors but nobody sells them locally. Skegness is very poor for shopping, being only a small town. The nearest Maplin is 25 miles away at the other side of Boston.

I presume something like this http://www.tlc-direct.co.uk/Images/Products/size_3/TACS929.JPG will suffice. I know I should build something myself but I don't know how and I don't want to mess around with 240v. I will try to find something non-Chinese from Amazon or similar. Any recommendations would be appreciated.

In the short selection of recordings I managed, I can report TA audio on 600, 620, 670, 730, 930, 950, 1010, 1060, 1200, 1320, 1400, 1430 & 1540. Most of it was too weak to decipher unfortunately. Better luck this evening I hope.

4506. Conditions Improving Further

Yahoo group: skywavesmw
Date: 2014-10-04 22:00:25 UTC
From: John Faulkner, Skegness
Topic: 4506 Message: 4506

Very interesting Asian conditions on MW this evening. I need to go through the recordings properly, hopefully tomorrow sometimes.

Hopefully JOER 1350 will have had audio at some point as the time signal was clear at 2000. 1413 JOIF less so.

Pyongyang in with best signal yet on 819 with reasonably clear audio.

China, South Koreans & Japanese stations also present on other frequencies, recognisable by time signals, but none strong enough for audio at first listen. Certainly plenty of Asiatic time pips at 2000 and 2100 this evening which need some closer inspection.

Presume this is now Canadian audio (in at 2145) on 930 and 1400. This is very early here if so. Even vague OM speech on 1390.

Here's hoping my recordings don't crash overnight.

Good DX!

John

John,

Have you considered buying a small on-line UPS? I've found they switch over extremely fast and provide spike protection. For example we had some construction in the neighborhood and several times the workers hit buried powerlines with their tractors. My system switched over and a minute later the lights in the house flickered and the power went off. The unit detects bad power extremely well.

They're a good investment IMHO for protection all your PCs and equipment and only need batteries every 3 years or so. I have a line interactive one also and it works ok but I'll replace it with another online unit.

Thanks Microcode.

Sorry but I don't know what you mean by a UPS. Can you be more specific?
Maybe something like this?
http://www.amazon.co.uk/Belkin-SurgeCube-1-Way-3-Pin-Protection/dp/B0001GYNJC/ref=sr_1_3?s=computers&ie=UTF8&qid=1412496308&sr=1-3&keywords=surge+protector

I actually found one of these
http://www.amazon.co.uk/Brennenstuhl-Premium-Mains-Socket-Protection/dp/B003BIFLXY/ref=sr_1_6?s=computers&ie=UTF8&qid=1412496365&sr=1-6&keywords=8+socket+protector
and tried it but it had no effect. It had the British Standards stamp on
it but no actual brand name, so it was probably just a cheap one. It
didn't solve the problem.

I am slightly embarrassed to have zero knowledge of these things but I
have never needed one before.

Thanks

John

Hi John,

UPS = Uninterrupted Power Supply. I'm not sure if it would solve your spike problem. We used to have them on the the PC's power circuits, when I worked for BT.

Chris.

Hi,

UPS as in "uninterruptible power supply." It's a backup source of power based on inverting power from batteries. They often also condition the power and offer all sorts of protection against not only surges but also brownouts and other fluctuations that can damage equipment.

If you are in the UK I can recommend Gamatronic.

http://www.gamatronic.co.uk/

Specifically have a look at the G-Net line.

The site is awful but the people are helpful. The factory sells direct and delivers or they can recommend a reseller.

In America the APC brand is very popular.

Well I just hate how Yahoo does this. You can understand the odd glitch but this is so regular with Yahoo. It's easy to think that you are being ignored sometimes when this happens. It's also useful to get an acknowledgement so you know your post was seen.

I am pleased to say that this morning's recordings came out intact. Now going through yesterday evening's recordings - some of which suffered as a result of a loose connection on the antenna.

Log soon.

John

Yes Yahoo is really a shambles. But it's probably better than google's
spying for themselves and all the goverments- yahoo only spies for the
goverments.

I didn't note Chris's email address but perhaps yahoo email ids get
preferential treatment on yahoo mailings.

Setting up a usenet newsgroup would be best, followed by a private list
server. There is concern yahoo groups will be shutdown soon since they've
been bleeding red ink for so long.

Sorry, I forgot to say, I am on the east coast of Lincolnshire, England.
Boston is a town about 22 miles south-west of here. It's a rural
location so shopping leaves a lot to be desired when you want to buy
something 'specialist'. I try to avoid Maplin at all costs if possible
as they are well-known for their ridiculously high prices.

:O)

No problem, John. Didn't mean to press you but that sounded awfully like Massachussetts! I lived in the country most of my life and always ordered most things through the mail. Hopefully you can get something you're happy with at a fair price. Personally I feel spike protection alone is not that useful. A good UPS with surge protection covers all the bases except the first power failure after the battery dies. Don't ask me how I know ;-)

My Gamatronic units even offer a surge protector for the phone. You just plug the phone into the back of the unit and run another phone cord from the other output jack. Very nice touch.

Unbelievable reports. I have not seen MW distances like that over land. Your loggings wouldn't be trivial for SW stations on HF.

I'm starting to wonder if you have some kind of radio pipe aimed at your QTH or a personal cloud with an ionized lining ;-)

> Good DX!

I'll say!

Thanks.

No pipe involved :O) This location is much better than my last for medium wave. Why? I have no idea as I am less than a mile from there. Noise can be a problem too.

The Asiatic reception is possibly understandable because I am on the 'right' coast. Generak North American receptoin, for instance, would be better received on the west coast. My North American reception is generally quite poor, but when conditions allow a northerly path to open, I have a sea path to Alaska and the north-west of the US and Canada. Those kinds of openings are rare, but I have received Alaska and the North-West Territory here in December 2010.

The flag is an excellent antenna too.

'Scuse the mistakes with my dates today.

4526. New Skywaves Forum

Yahoo group: skywavesmw
Date: 2014-10-06 16:54:58 UTC
From: julian@...
Topic: 4526 Message: 4526

The general feeling among Skywaves moderators is that Yahoo Nova is not fit for purpose and we need a new platform, so we are pleased to announce that a new Skywaves 'Bulletin Board' Forum is online and ready for your posts:
http://skywavesdx.org/ http://skywavesdx.org/
This allows us to have several Skywaves groups under one roof, managed by the same team of owners and moderators. The new forum is hosted on its own webspace and there are no adverts. It is fully searchable. All members' email addresses are hidden and there is no need to worry about spam.
You must visit the site to post but you can choose to receive email notifications of replies and new posts. We hope that most members will be willing to try out the BB Forum, but the Yahoo! Groups forums will continue to operate and you can choose to post on one or both forums. There is a forum where you can ask questions and post comments and suggestions. The BB Forum will evolve and adapt to membership needs.
My thanks go especially to the original Skywaves founder John Faulkner for his time and effort in building the new forum, and to Lynton Towler for technical assistance. Thanks also to the other members who have been testing it over the last few weeks.
From the joint-owners,
Julian Hardstone and Günter Lorenz

From Golmud. John's log made me check it a month ago, see below. Maybe too long explanation :-) Where are the times given in MW list? I did log in, but I still don't see a column for times.

73, Mauno

From: Günter Lorenz
Topic: 4535 Message: 4535

Anyone familiar with this site / these sites?
OFCOM lists them at different NGR coordinates. A mast is visible at TQ557401:
http://maps.google.com/maps?ll=51.139472,0.224556&t=k&hl=en
TQ556401 is close-by. But would BBC and TalkSport share a mast?

Station Area Site Licence Frequency NGR Site Ht In-Use EMRP (kW)
Talk Sport West Kent Tonbridge AN000003 1053 TQ557401 104 4
BBC Radio Kent (AM) Kent Rusthall BBC000024 1602 TQ556401 104 0.25

Above data is from http://stakeholders.ofcom.org.uk/binaries/broadcast/guidance/tech-guidance/tech-parameters/mf.csv

Günter

4536. UK: Londonderry

Yahoo group: skywavesmw
Date: 2014-11-24 11:08:06 UTC
From: Günter Lorenz
Topic: 4536 Message: 4536

A similar question, now regarding Londonderry:

Station Site Licence Frequency NGR Site Ht In-Use Aerial Ht In-Use EMRP (kW)
BBC Radio 4 (AM) Londonderry BBC000004 720 IC405176 175 107 0.25
BBC Radio Ulster/Foyle (AM) Londonderry BBC000010 792 IC405176 175 107 1
BBC Radio 5 live Londonderry BBC000005 909 IC405176 175 107 0.28
Talk Sport Londonderry AN000003 1053 IC404176 175 46 1
(above data from OFCOM mf.csv file)

Given the different NGR values, that should be two sites. I can see a T-antenna here: http://maps.live.com/default.aspx?v=2&cp=55.004667~-7.367806&style=h&lvl=17&tilt=-90&dir=0&alt=-1000
Is that the BBC or TalkSport - and where is the other?

I've tried to convert the NGR to WGS84 using http://www.dorcus.co.uk/carabus/NewNGRtoLL.html , but it seems that these are Irish and not UK NGR.
No idea how to enter a single value in http://www.osi.ie/calculators/converter_index.asp?alias=/services/gps-services/co-ordinate-converter

4539. Ultralight DXing Report - Launceston Tasmania - 01/02/2015

Yahoo group: skywavesmw
Date: 2015-02-01 10:42:52 UTC
From: tanger32au@...
Topic: 4539 Message: 4539

Date: 01/02/2015
Time: 20:30 - 20:50
Location: Backyard, Home Launceston Tasmania
Radio: 7.5” Loopstick Tecsun PL-380
Total stations logged: 58
New stations logged: 0
Notes: This has been my first serious Ultralight DXing session in a few weeks. Tonight our daughter is staying with her grandparents so I took the chance to do a session from my backyard around sunset, this session was undertaken just after my long term ultralight dxing project frequencies were checked. Overall I logged 58 stations; these were all stations I have logged in the past. I noticed some interesting signals around 1200KHz - 1300KHz with the signals being received at very strong levels compared to normal. A number of “regular” copy stations from Victoria and NSW were missing in bad band noise; this was most noticeable up until 800KHz where signals stated to improve again. 7BU and 7AD were both very quite again, they were heard but not at anywhere near the signal level I would have expected, this has been an issue for a little while now.
Overall this was a really enjoyable session and it was nice to get my “DXing” feet wet again.

Photos and video of my loggings is available here:
http://ultralightdxing.blogspot.com.au/2015/02/ultralight-dxing-report-launceston.html

1395 - 5AA 0
1440 - 1SBS 0
1503 - 3KND 0
1593 - HPON MELB 0

Notes: Yesterday afternoon I took our daughter for a walk to the Tailrace park, I found a nice cool spot under a tree (see map below) and logged some stations as part of my long term Ultralight DXing project.

The results as seen above were very positive with most of the lower band stations coming in at good signal levels. Both 7BU and 7AD had excellent signal levels; close to the best I have heard them for this time of the day. 3GG was coming in very strong was a good solid 4. 3LO also easily hit a 5 and was a pleasure to listen to.

Link to some photos and video from this location.

1440 - 1SBS 0
1503 - 3KND 0
1593 - HPON MELB 0
Notes: Over the weekend just been my wife, daughter and I spent a night in Hobart, about 180km south of my home DXing location. Due to a number of factors my DXing time was limited to a short period on the Saturday night and again the next morning from our hotel room. Overall the results from this location were very disappointing, except for the three local Hobart stations, a hint of 7SD on 540KHz and HPON on 1008KHz from Launceston and surprisingly a weak signal from 3MP on 1377KHz the band was dead. Most frequencies in my long term ultralight dxing project group were full of noise and in a couple of cases some very weak traces of a signal could be heard on other frequencies but nothing at a level where I could record them as anything more than a 0.
In the future I hope to explore some different areas of Hobart, as a reference point I had a look at my ultralight dxing report from when we were last down in Hobart in March 2014 (http://ultralightdxing.blogspot.com.au/2014/03/ultralight-dxing-report-hobart-tasmania.html) in that case I logged 67 stations, we did stay at a different hotel that time on the other side of the CBD and I suspect this had a lot to do with the major difference in how many stations I was able to receive. A couple of photos and a graph showing the difference between my average signal level and what I received on the weekend is at this link:

4543. Explaining our hobby to non radio people

Yahoo group: skywavesmw
Date: 2015-02-18 03:22:54 UTC
From: tanger32au@...
Topic: 4543 Message: 4543

Recently I have had somebody ask some questions about our hobby (this is somebody I know who found my blog).

I have an intro page on my blog (http://ultralightdxing.blogspot.com.au/p/an-introduction-to-ultralight-mw-radio.html http://ultralightdxing.blogspot.com.au/p/an-introduction-to-ultralight-mw-radio.html) and this was helpful but the question they asked that I could not really answer is why I / we do it? To them it makes no sense to listen to distance radio stations but not care much about the content....

How do others explain this?

Paul

Hi Paul,
This is one you will always struggle with, as it's down to how
Interested the person is your explaining it too.

I once had to explain the use of 2 fibreglass fishing rods for my
Flag antenna, to neighbours. They looked confused, l often find
saying your a radio ham, makes it easier for people to understand.

When people are actually interested and not being nosey, l
will compare the hobby to fishing or stargazing, of course some
do get it, thankfully my neighbour does, and even turns his PLT off
at night for me.

Great post Paul

Regards
Damien

Thanks for the reply, I have had enough issues like this in the past when I was a HAM and had some aerials up.

This is a huge fear of mine. Yes, I have managed to develop it into a big problem but, to be fair, it is based on personal experience.

Please excuse me for pointing you elsewhere, but we had a great discussion about this on the new Skywaves group here:
http://skywavesdx.org/viewtopic.php?f=57&t=290

I still like to hide, well away from public eyes when I am DXing mobile. If you want to know some of the problems I have had, read my blog entry here:
http://skegnessdx.blogspot.co.uk/2013/01/it-shouldnt-happen-to-dxer.html
and these are the less cruel ones. Some people /are/ quite cruel and I suppose that is where my mobile DXing hang-ups come from. Being completely honest, it's a case of Pardon me for being human but I sometimes find it difficult to shrug off the verbal abuse I have had over the hobby, although sometimes I find it all quite laughable.

John

Thanks for the excellent reply John, I am really sorry to hear about all
the issues you have had.

I am thankful that my ultralight radio, while looking a bit strange (
http://4.bp.blogspot.com/-t9SJGOf2M7E/VHpTrTu5obI/AAAAAAAAFH4/95uiChm0Y04/s1600/29112914_QueechyLake%2B(6).JPG)
is still very small and I can easy carry it without looking out of place.

I have never had any issues with my portable ultralight DXing session or
the public, I guess being just under 6 foot tall and 220 pounds means that
most people are not going to want to have a go with me.... I also don't run
long wire aerials so I don't stand out as much.

On my blog I have written a guide to planning a portable ultralight dxing
session, this has some good advice on personal security.
http://ultralightdxing.blogspot.com.au/p/planning-portable-ultralight-dxing.html

4548. Long term Ultralight DXing Project Results - 20/02/2015

Yahoo group: skywavesmw
Date: 2015-02-20 01:06:08 UTC
From: tanger32au@...
Topic: 4548 Message: 4548

I have just published my latest results of my "Long term Ultralight DXing project"

http://ultralightdxing.blogspot.com.au/2015/02/long-term-ultralight-dxing-project_20.html
http://ultralightdxing.blogspot.com.au/2015/02/long-term-ultralight-dxing-project_20.html

4549. Portable Ultralight DXing Session - Punchbowl Reserve - 22/02/2015

Yahoo group: skywavesmw
Date: 2015-02-22 05:40:48 UTC
From: tanger32au@...
Topic: 4549 Message: 4549

For the past few weeks I have been trying to get back to this location for another portable ultralight DXing session. Between other commitments, the weather (both excess heat and rain) and our new baby this has proved to me much harder than what I was expecting.

I have just published a blog post from this mornings session, it has some general notes, loggings, a series of photos and a video of some of the stations I logged:
http://ultralightdxing.blogspot.com.au/2015/02/portable-ultralight-dxing-session.html

Excellent work Paul.

If I could only find my beverage wire I would be out and about DXing the MW band. Too many other projects and domestic duties to contend with also, so this season might be out of the question, expecially in view of the poor conditions we've been having.

Love the wildlife sounds towards the end of your video.

John

4551. Interference on 1080 and 1134 khz

Yahoo group: skywavesmw
Date: 2015-02-23 16:11:41 UTC
From: mvarnhem@...
Topic: 4551 Message: 4551

I suppose it was in November 2014 that I observed a nasty interference on 1080 khz and 1134 khz. Since that time the interference is audible daily.

The last week I have put a lot of time in investigating these interferences.
I was also in contact with a group of radio listeners in The Netherlands, Belgium and Germany, who could also hear the interference on both frequencies. The signals are also audible in the UK.
Now it is almost 100% sure that the interference is caused by signals of Talk Sport Radio.
It is difficult to say which Talk Sport Radio transmitter is the origin of the interference.
Also the Talk Sport transmissions were checked on their frequencies 1071 and 1089 khz, but no strange signals can be heard.

I made some recordings of the interference which you can hear on the following link:

https://app.box.com/s/14bw8iwbllfp10iy081d8t66hz4wbxll

Characteristics of the interference:
Frequencies : 1080 khz (best audible in Lower Side Band) and 1134 khz (best audible in Upper Side Band, but also in Lower Side Band)
Direction: In The Netherlands, Belgium and Germany the strongest signals of the interference can be heard on north / north west antennas.
Hours of reception of the interference: The interference can be heard in The Netherlands, Belgium and Germany during the hours of darkness; remarkably, the signal sometimes disappears but returns after a short while; maybe that has to do with propagation.

Now the question is which transmitter of Talk Sport is causing the interference.
Nearby frequencies are 1071 (two low power stations) and 1089 khz (several high power stations and also some lower power stations) .
As you may know Talk Sport carries local advertising so if it was possible to match the interference to adverts on a particular regional transmitter it might be possible to work out where it is coming from.

Because of reception conditions here on the mainland, it is not very easy to find the transmitter which gives the trouble; so, I would like to ask the UK DXers to check their regional frequencies of Talk Sport and the affected frequencies 1080 and 1134 khz, especially also at daylight and not only at darkness.
I hope you can report your findings mentioning your location, also when you don’t hear the interference. As mentioned before, the signal sometimes disappears but returns after a short while, so if you don’t hear the interference, do listen again somewhat later.

In this way we can probably find the faulty transmitter.

From: Chris Thatcher
Topic: 4551 Message: 4552

Hi Max,

I have listened to both 1080KHz and 1134KHz, here in Lincoln, UK (IO92sg), but do not hear any strange noises on either of those frequencies. This was just now, in daylight.
My radio is a Lowe HF-225, connected to a Wellbrook loop antenna. The antenna is directional and is receiving from North-West - South-East direction, at the moment.

Best regards,

Chris (2E0NDT)

4556. Ultralight DXing - St Helens - 27/2/2015 / 28/2/2015

Yahoo group: skywavesmw
Date: 2015-03-01 20:36:32 UTC
From: tanger32au@...
Topic: 4556 Message: 4556

Over the weekend just been my wife and I took our daughter away to St Helens for the weekend. St Helens is the largest town on the east coast of Tasmania and it is about a 2 hour drive from our home. This location has a very relaxed feel about it and is a very popular holiday spot. I have previously undertaken some ultralight DXing from this area but have not had a chance to get back since getting more serious about ultralight DXing and having my 7.5"loopstick equipped PL-380. This area is also one of the most eastern locations on the Tasmania coast; this I was hoping would produce some good New Zealand DX. I undertook an ultralight DXing session on the Friday night when we arrived and three sessions for my long term ultralight DXing project, the results (and some photos) are below.

Ultralight DXing: Ultralight DXing - St Helens - 27/2/2015 / 28/2/2015

4558. Methods of storing loggings

Yahoo group: skywavesmw
Date: 2015-03-05 01:15:24 UTC
From: tanger32au@...
Topic: 4558 Message: 4558

I am just in the process of trying to find a better way of storing my radio related loggings. This is both my full band log and also my long term ultralight dxing project results. So far I have tried the following. I am keen to hear what other people do to record this sort of information.

Excel Spreadsheet: Good for “static” information such as my overall log but not as practical for my long term ultralight dxing project as my notes for this can push off the side of the screen and it does not easily copy across to my blog or forums / groups.

Access Database: I built a few databases at college and in my early years of employment, I have not done as much with them over the past few years. I built a database last year which works well but again storing large amounts of notes is an issue and exporting information for my blog and groups / forums does not work easily.

Portabase: Better than Access for my needs and is easy to add / edit information. Exporting information for my blog and groups / forums does not work easily and I need to spend a lot of time on the formatting of this.

TablePro: Much like Portabase, some good features but exporting information for my blog and groups / forums does not work easily. I have also had some bugs with this program.

DB4LTULDXProject : This is a custom database program I have written using Just Basic. In about 800 lines of code I have programmed this to do 95% of what I want to log the results of my long term ultralight dxing project. It is the best for posting to my blog and forums / groups but does lack a spell checker and as it is something I have custom designed and written it does have some bugs and quirks. I still use Excel to store my full band loggings.

Paul

Date: 6/3/2015
Time: 6:10 - 6:22
Location: Home, Launceston Tasmania
Weather: Pre sunrise, cool
531 - 3GG: 3
540 - 7SD: 3
549 - 2CR: 2
558 - 7BU: 3
585 - 7RN: 4
621 - 3RN: 5
693 - 3AW: 5
747 - 7PB: 1
774 - 3LO: 5
855 - 3CR: 4
900 - 7AD: 2
954 - 2UE: 2
1008 - HPON (Launceston) : 5
1080 - HPON (Hobart): 2
1116 - 3AK: 3
1179 - 3RPH: 2
1224 - 3EA: 3
1260 - 3SR: 3
1341 - HPON (Geelong): 2
1377 - 3MP: 2
1395 - 5AA: 2
1440 - 1SBS: 1
1503 - 3KND: 2
1593 - HPON (Melbourne): 2
Notes: Due to a change in my work hours I am now getting up a little bit earlier each morning, over the past few mornings I have noticed that it is still dark when I get up, this lead to me getting up a little bit earlier again this morning to undertake a session for my long term ultralight dxing project before going to work.

At my 6:10am (local) start time I started at the bottom of the band and logged the signal level of each of my 24 check frequencies. As can be seen from the list above, three of the four stations which I rated as a 5 were from Victoria, the only Tasmanian station to reach this level was the HPON station on 1008KHz which is local to me. Again the stations at the lower end of the band which run higher power levels were the stand outs, by 1080KHz all stations were only able to be rated as a 2 or 3.

7SD on 540KHz was down in signal level and the best I could get this at was a 3. 7PB from Hobart on 747KHz was very poor with a lot of mixing; I suspect another station on this frequency was a cause of this, no ID of this could be heard.

Overall this was a very enjoyable session and the results were encouraging for future sessions at this time.

4560. Spain: log & schedules

Yahoo group: skywavesmw
Date: 2015-03-19 11:09:24 UTC
From: giaber58@...
Topic: 4560 Message: 4560

With Dario Monferini I was in Bocca di Magra (La Spezia, Italy) for some DX days. Here some Spanish tips with verified local and regional schedule. After 31 March Legal time will start, pay attention. The local times will remain the same, I think, so you have to correct the UTC time.

You can see these info also on these blogs:

AIR - RADIORAMA: Ascoltiamo La Spagna in Onde Medie

From: Jurgen Bartels
Topic: 4561 Message: 4561

This shows the levels of Iceland and Faroers so far
http://dx.3sdesign.de/unid/Plot-ISL-150320-1005.png

531 FRO is affected the most.
189 ISL almost not at all

Surprsingly 531 MRC (Jill FM) comes in quite well now, I would have expected it much weaker, maybe also eclipse enhanced?

Interesting are the LW deep fade periods around TX sunrise, very different to MW.
Also note the deep fade on 37.5 around 2:30
All times are UTC+1

531 FRO runs a special program and just interviewed Dutch eclipse-watchers in English

Jurgen Bartels Suellwarden, N. Germany

From: Dominique KREMP
Topic: 4563 Message: 4563

It's now 1030 UTC:

-153kHz, Roumania is very strong, nothing at all from Norway, even with the help of the Wellbrook

-189kHz, fair signal from ICL

-531kHz, I hear FRO but the signal has to struggle against Algeria

Dominique

Normandy, France (betw. Cherbourg and Mt St Michel)

From: Jurgen Bartels
Topic: 4561 Message: 4564

Current plots
Iceland really saw a pronounced peak
http://dx.3sdesign.de/unid/Plot-ISL-150320-1110.png

ISL and FRO
http://dx.3sdesign.de/unid/Plot-ISL-FRO-150320-1110.png
The FRO peak was much wider with a deep notch period in the middle

Seeing the shade from space moving towards us explains now why I heard 531-MRC,
the shade was over Spain / France at that time. It was gone later on.

4567. WG: Algeria 153 kHz ???

Yahoo group: skywavesmw
Date: 2015-03-31 07:24:48 UTC
From: Günter Lorenz
Topic: 4567 Message: 4567

Romania seems to be off since about 07:00 UTC, I still see a carrier at nominal.

73,
Günter

-----Ursprüngliche Nachricht-----
Von: Günter Lorenz
Gesendet: Mittwoch, 25. März 2015 10:39
An: mwcircle@yahoogroups.com; mwoffsets@yahoogroups.com; SkywavesDX (skywavesDX@...); 'mwdx@yahoogroups.com'
Betreff: Algeria 153 kHz ???

While Sergio Sarabia from Spain reports that Algeria 153 kHz is inactive, on SDRs all over Europe, three distinct carriers can be seen on 153 kHz.
Obviously, Romania dominates the channel, and the Norwegian tx is also visible below 153.000. The third carrier, very close to nominal, shows distinct fades, so any local QRM can be excluded. It seems to operate 24h.

Offsets: http://www.mwlist.org/mwoffset.php?khz=153

One theory is that Algeria is on air, but without or with very low modulation.
Otherwise, there must be an unknown tx on 153, or a mixing product with a very wide "coverage".

Any thoughts / observations are welcome.
Two screenshots taken in Central Europe are availabe here:
http://www.mwlist.org/public/4_carriers.png (March 11, 2015, 14:22 UTC)
http://www.mwlist.org/public/153_why_fadeout.jpg (March 10, 2015, 17:41 UTC)

The carrier seems to be from ALG

It is strong and unmodulated in Albir, carrier is about 30dB weaker than ALG-252

At my QTH I hear ALG-252 behind IRL, and its carrier also about 30dB stronger than 153. Assuming IRL and ALG are near equal levels

In Albir I hear a *very* faint audio. And I also hear the same audio at my QTH. I am not sure if that's Lux Eff. or the actual audio not 100% cut off.

Yahoo group: skywavesmw
Date: 2015-05-27 09:01:18 UTC
From: Jurgen Bartels
Topic: 4571 Message: 4571

Perseus running on 99 EUR tablet "Stream 7" that runs Win8.1 x32.
Perseus is connected to my Server, demonstrating that I could walk around the house & garden and still DX on my main antenna.
Actually I could work right on my antenna and see the immediate shack results.

https://youtu.be/fyvHBlspe5A

German viewers probably can't watch it, because YT blocked it due to their fight with GEMA. That is extremely odd, because I just tune the band and do not stay longer than 10s on each station
It's obvious that YT is the culprit, not GEMA
So use a proxy to get around it.

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el, UHF:48-el

It is only an YT issue within Germany.

Perseus is just an example, you can also use any other client/server SDRs that
run on desktop PCs.

4577. Perseus on TV

Yahoo group: skywavesmw
Date: 2015-05-31 21:08:39 UTC
From: Jurgen Bartels
Topic: 4577 Message: 4577

Just found an older magazine article mentioning Win8.1 is Miracast-able.
That rang a bell, because my TV also supports Miracast.

So I enabled Miracast on my TV, and then followed this procedure on my 7"
tablet.
http://answers.microsoft.com/de-de/windows/wiki/windows8_1-hardware/miracast-unter-windows
-81/4913185d-c5c3-4b57-bb97-5a9246d74dca

Voila, the tablet screen gets replicated on my TV. There's a bit of latency.

Turning on Perseus shows the spectrum stuttering, now also on the tablet, but
the audio is perfect. CPU usage is 60%

The TV screen is very crisp & sharp

4582. Portugal: Mediumwave tx reactivated (Antena 1 - 666 kHz Valença)

Yahoo group: skywavesmw
Date: 2015-06-11 20:15:36 UTC
From: Luís Carvalho
Topic: 4582 Message: 4582

Hello all,

Good news from Portugal. RTP, the public broadcaster, has recently reactivated the transmitter for *Antena 1* at* Cristelo Covo (Valença) - **666 kHz 10 kW*. This frequency, located Northwest Portugal close to Spain, was closed down some years ago (in 2011) because the transmitter suffered a irretrievable breakdown. As a consequence of this problem, RTP has been postponing this matter... until now. It appears (my speculation) that the technical dept. found one spare transmitter not regularly used but kept in good condition, which should now replace the old, broken equipment.

According to the user "P. Pinto" at https://groups.yahoo.com/neo/groups/mundo_da_radio/conversations/topics/2739 , the modulation is somewhat weak; anyway, the transmitter puts good signal between Valença and Caminha; 666 kHz have fair reception within the city of Viana do Castelo.

This MW outlet is particularly useful in highly mountainous areas where the reception via VHF-FM has some gaps. Despite the fact that RTP has been installing new VHF-FM relays in the region, there are few areas (e.g. Vila Nova de Cerveira) not well served by VHF-FM, so mediumwave should be an alternative to listen to the first channel of public radio.

Best regards, good DX & 73,

Luís Carvalho

4586. Long Term Ultralight DXing Project - Comparing Different Locations

Yahoo group: skywavesmw
Date: 2015-06-21 23:35:18 UTC
From: tanger32au@...
Topic: 4586 Message: 4586

Recently we have moved house, as part of this I have ran a small side project where I have compared the average signal level of these stations at the two locations and then graphed them.

All stations were logged at around the same time of day over a few days at each location and then the signal levels were averaged and graphed.

As can be seen below the new location generally provides better signals levels with only 7BU on 558KHz and 7AD on 900KHz being noticeably worse at this new location.

4594. Ultralight DXing Report - Denison Road Scenic Lookout

Yahoo group: skywavesmw
Date: 2015-08-12 22:18:46 UTC
From: tanger32au@...
Topic: 4594 Message: 4594

Date: 12/08/2015
Time: 16:10 – 16:50 Local
Location: Denison Road Scenic Lookout Launceston
Radio: 7.5” Loopstick Tecsun PL-360
Total stations logged: 27
New stations logged: 0

Notes: Recently while out driving I came across the sign (first photo) for a lookout that I had not heard of before, I made a mental note to return and check it out. Yesterday I had a couple of hours of spare time so decided to go and undertake a portable ultralight DXing session from this location.

I parked my car and set off up the rough track, I arrived at the seat (second photo) and thought “this can’t be it” so kept going, soon the track ended so I walked back and set up on the seat. In the 40 minute period I logged 27 stations which were a mix of Tas, VIC, NSW and some SA stations. No new stations were logged and overall I was not that impressed with the location or the medium wave stations I heard on Medium Wave.

I also did some listening on the shortwave bands and logged the following stations:
7405KHz Radio Marti
7455KHz RMI
7555KHz EWTN
9790KHz Radio France International
11520KHz EWTN
11580KHz RMI
11625KHZ Vatican Radio
11775KHz China Radio International
11850KHz Radio Free Europe
13635KHz Voice of Turkey
15595KHz Vatican Radio
15700KHz Radio Romania International
17615KHz China Radio International

Topic: 4600 Message: 4600

Medium wave DXing Report - Launceston Tasmania

Date: 21/11/2015
Time: 16:45 – 17:30 local
Location: Punchbowl Reserve
Radio: Tecsun PL-360 / AR1748
Total medium wave stations logged: 28
New medium wave stations logged: 0
Notes: Late yesterday afternoon my wife, daughter and I headed to the Punchbowl reserve for a BBQ picnic; I also took along my radio DX kit. While my wife was cooking some sausages I watched our daughter playing and undertook a portable DXing session. In the 45 minutes I was setup I logged 28 medium wave stations, these were logged on a mix of my stock Tecsun PL-360 and AR1748. The lower half of the band produced results as I would have expected with all my “normal” day time ground wave stations being received at fair to good signal levels. My real shock was 2RN on 1512KHz, this station came out of the noise towards the end of this DXing session with very weak radio national. This was received on my AR1748, both my PL360 and AR1733 didn’t show any trace of a signal at this time.

Overall this was a very enjoyable session at this location. With our move to the other side of the city shortly I suspect I won’t be able to get back to this location in the near future. Below is a full list oif the stations I logged.

Time: 20:45 – 21:35 Local
Location: Home, Launceston Tasmania
Radio: AR1733 + AR1748
Total medium wave stations logged: 107
New medium wave stations logged: 0
Notes: On Tuesday night I undertook another medium wave DXing session at my home. Results were as I would expect with 107 stations being logged across both radios. I have a couple of interesting observations from this session.
684KHz – 2KP was very badly down in the noise, signal was close to unreadable at times.
1143KHz – I logged 2HD at a very good signal level early in this session, until another station, possible 4HI came crashing in with peaking audio, turning this frequency in to a real mess.
1548KHz – I managed to confirm this station as 4QD via an announcement for “ABC Queensland”

Hello!
I've created two albums with pictures from Motala LW and Göteborg MW.
Motala was in service with first 30kW from 1927-1935, 150kW 1935-1962, 600kW (300kW) 1962-1991.
Göteborg was in service 1952-1984.
Please enjoy!

Chris - Thanks for sharing your pictures from the past of Motala. I wouldn't have heard Motala on 191kHz when I started dxing in the 60s because by 1962 the LW tx had moved to Orlunda. I only remember that 1178 carried external px in those years
It is interesting to read about the problems which troubled Orlunda throughout its life. In 1970 a lightning strike caused the collapse of the main mast onto the tx building. It resumed operation with five masts, later reduced to two. When it closed in 1989, a survey reckoned it had only 200 regular listeners, which is maybe typical for all LW tx today!

4611. Swedish broadcast history

Yahoo group: skywavesmw
Date: 2015-12-20 10:12:29 UTC
From: Christian S
Topic: 4611 Message: 4611

Hello!

I will write some articles about broadcast history, the AM-epoche, in Sweden.

I had a homepage but it was only in Swedish. I'll begin with Motala LW, then continue year by year in following order:

Stockholm/Spånga (1930)
Hörby (1937) inclusive SW
Sundsvall (1950)
Göteborg (1951)
Stockholm/Nacka (1956)
Östersund (1957)
Motala/Orlunda (1962)
Sölvesborg (1985)

Motala longwave,

In a request to H.R.H King Gustaf V, the Royal Telegraph Agency asked for grant to build a broadcast station.

This was not the really first broadcast station. A number of small privat stations had appeared around in Sweden.
Now the state wanted to nationalize broadcast. The state bought all the small stations and had plans to build a greater station somewhere in southern Sweden to cover the most dense populated areas.

H.R.H King Gustaf V granted money to build this station which was intended to be placed in Motala on a plateu in the central town.

The architect Mr.Carl Åkerblad was given the mission to draw the station building and prof. Henrik Kreuger constructed the antenna towers.

Mr.Åkerblad and Mr. Kreuger had Grimeton as example when Motala was to be built.
The station building contained different kind of transformers, resting room, mercury rectifier and the transmitter hall and more.
It was designed in neoclassical style. The backside was prepared to easily to be extended if a new transmitter had to be installed.

The transmitter was made in the U.K by Marconi and the towers were made by Motala Verkstad. Yes, it is towers since they are not guyed steel lattice masts. For transmitting the 1:st program (a 2:nd program came first in the 1950's) the program was input by telephone wires.

In 1927 the 30kW transmitter was inaugurated. But the very first transmission was done from Karlsborg on the opposite side lake Vättern since Motala wasn't completed until the scheduled date.

In the beginning of the 1930’s Motala was the strongest broadcast station in Europe! It could be heard nation wide in both tube radios and small crystal receivers.

But the long wave band became more and more narrow. It became like the wild west on the band when more and more stations appeared without any coordination. So it became more difficult to receive Motala with its 30kW. A new stronger transmitter on 150kW was set into service 1935.

The antenna was kept, a cage antenna between the two 124m high towers and old the 30kW was put in stand-by mode.

The 150kW-transmitter was also made by Marconi and contained the new CAT-14 tubes with the astonishing weight of 50kg!
CAT stands for Cooled Anode Tube - the anode was water cooled from a closed surcuit with a cooling tower made by wood outside.

On the 30kW-transmitter the safety regulations wasn’t that high. Just a railing protected the staff from lethal high tensions.

Now with the new 150kW-transmitter which had different frames for the different part ex. modulator, PA, rectifier etc. were the doors electrical sealed and couldn’t be opened during operation. A frequency shit oscillator belonged to the transmitter, a well keep secret from a anxious time. The FSO could send secret messages during the transmission, not hearable for the common listeners...

In the late 1940’s shortwave transmissions began from Motala before they were moved to Hörby. Rhombic antennas were set up on telegraph poles on the backside. In 1952 the short wave transmissions were moved to Hörby. The Swedish Telecom Agency began to discuss to replace the station in Motala with a new one in the late 1940’s. Disturbing fading occurred already 80-90km from the transmitter. It required staff 24/7, low efficiency and it began difficult to get spare parts. A new station couldn’t be built on the present location since the area was too small.

The well known call ”Stockholm-Motala” ceased and the Broadcast orchestra alos ceased with playing the national hymn every evening at closure.

Mr. Folke Strandén at the Telecom Board designed in the mid 1950’s a unique antenna system with a central mast and five antennas standing in a circle around the the central mast. This was to get a good ground wave without a disturbing space wave. This was intended for the new long wave transmitter.

In 1962 the time was up for this station. It was switched off and replaced by a new much larger, modern and more efficient transmitter 15km south east from Motala, nearby Vadstena.

The now former radiostation was inaugurated 1977 as a radio museum. Some people wanted to demolish the whole station but people and community policiticans said no. At least the towers have been well known landmarks since the 1920’s and like a symbol for Motala.

The 30kW-transmitter is still left today but a bit compacted. It can’t be put into service anymore. The 150kW is also preserved but can’t either be put into service. The towers are left but the antenna is dismantled.

4612. Re:: Swedish broadcast history

Thank you! Very interesting. Motala on dial Telefunken 340W "Katzenkopf" from 1934.

4613. Swedish broadcast history - Stockholm/Spånga

Yahoo group: skywavesmw
Date: 2015-12-21 18:13:11 UTC
From: Christian S
Topic: 4613 Message: 4613

Shortly after Motala was set into service it was time for Stockholm to get better radio reception.

The year was 1930 and a small, weak transmitter in central Stockholm at Brunkebergstorg in the same building as Radiotjänst couldn't serve Stockholm area enough and was an object to be replaced.

A new station was built on the Järvafältet, in those days the small village Spånga north of Stockholm.

Järvafältet was just farmland and an military exercises field. This was the outskirts of Stockholm.

It was constructed with Motala and Grimeton as modells with two towers from Motala Verkstad. The towers carried a simple T-antenna fed from the station building. Mr. Carl Åkerblad designed the station building and professor Henrik Kreuger designed the antenna towers. A beautiful white house in neoclassic style, large windows from floor up to roof and of course three crowns over the entrance. During 2:nd World War to be invisible for bombers the station building was painted green, surrounded with fences and guarded by soldiers.

The transmitter was on 55kW made my Marconi in the U.K. Due to different hight of the ground, the south tower was only 146m high and the north tower 150m high.

The lower section up to 40m was it two half and assembled together with a help mast. 29:th August 1929 was the start date for the construction works. A crane was moved upwards after the sections became done one after one.

Not only a medium wave transmitter was located in the building. In the cellar cooling pumps, transformers and other technical equipments were located. Up in the attic it was equipment for telemetries and a beacon for the nearby Bromma airport.

As with Motala it became old and disturbing fading occurred in short distance. So plans to replace Spånga were presented in the end of the 1940’s.

Television should be spread around the country. As Spånga should be closed down the towers were dissembled and were set up as link towers, one in Västervik and the second in Follingbo outside Visby on the island of Gotland.

So how could then the First Program be transmitted from Spånga without any antenna? A small approx 50m high Rhendal-mast replaced the towers the two last years the station was in service before Stockholm/Nacka took over.

Today nothing is left from the radio station. You can remains from the concrete base for the towers beside the walk and bicycle path between Spånga and Tensta.

Spånga is today a suburb to Stockholm with mostly plattenbau from the 1960’s.

The station was completely demolished short after Nacka took over. Today Spånga Sports Stadium is located at the same place as the radio station once upon a time was laying.

From 1934 Spånga used 704KHz (426m) with 55kW at 80% modulation. After the wave length conference in Copenhagen 1948, Spånga changed frequency to 773KHz (388m) until the closed down 1956. Nacka inherited 773KHz from Spånga.

4614. Swedish broadcast history - Hörby

Yahoo group: skywavesmw
Date: 2015-12-25 17:50:42 UTC
From: Christian S
Topic: 4614 Message: 4614

South of Sweden hadn't any good reception possibilities. Motala was a bit to far away to be received with good signal strenght.

The very first radio station was built in Karlsfält some km from the untill today present station. It was a small Marconi-transmitter on 10kW in a small wooden house betweeen to frame work masts carrying the T-antenna. This building was demolished some 10 years ago. But this wasn't enough. Instead a new buildning was built in functionalism style housing a 100kW transmitter from Telefunken, bought from the German Reich 1937. On old photos from the inaguration you can see the swedish flag beside the german swastiska flag....
The antenna was a frame work antenna, approx 130m high with 4 fading elements in the top, isolated from ground through a socket of china put on a ball of china material. Beside the station building a wooden cooling tower was built. The frequency was decided to 1178KHz, 254m.

As the transmitter was made in Germany, the Swedish Telegraph board bought as many tubes as possible shortly after the war broke out in september 1939. During the war it became very difficult to get tubes and spare parts from Germany.
So what to do? Well, after the war a new 100kW transmitter was bought from Standard Radio & Cables in Great Britain 1947.
The Telefunken transmitter was scraped except for the PA which was kept for exhibition and sent to Königs Wusterhausen in Germany in the late 1990's.
In Motala the experiments with shortwave transmissions were satisfied but not with the location. In 1949 construction works began for moving shortwave transmissions to Hörby. The stations building was extended and a new shortwave antenna array system was built with curtain antennas in different directions. Two slightly used Marconi transmitters were bought from the UK. To change frequency band the whole antenna circuit had to be changed for each transmission. Out in the field a "switch tower" was placed where the feeders from the transmitters became switched and connected to the right antenna.

In 1959 TV-transmissions began from a 327m high mast placed a km away. From the very beginning Hörby used channel E2
 untill 1984, from the late 1960's parallell with E43.
In 1973 the Marconi-transmitters was torn out and scraped, replaced by two 500kW Thomson-transmitters.
But these Thomson-transmitters wasn't that reliable. Televerket asked for several years to replace them. First in 1992 were the transmitters replaced. They became prohibited to use since they contained PCB in the isolation. Three new ABB/Thales 500kW transmitter were bought. These transmitters had PLL/Synthesizer and could be controlled and manouvered from a PC. Instead of duty 24/7 the staff could work only office hours. The old Thomson-transmitters were sold as spare parts. One transmitter was sold to Norkring and lived for another five years at the shortwave station in Fredrikstad and the last one ended up somewhere in Africa.
A new tube costed approx 500000SEK and a used but renovated tube costed approx 250000SEK. A used and renovated tube was accutally better since it didn't contain any impurities from the cupper which is in new tubes before you have "burnt" them with high tension for a few seconds. The tubes were water cooled with de-ionised water since water can be aggressive

against cupper.
Maxium power was 750kW but the most efficient was 500kW.

After several of the old medium wave stations were shut down during the 1970's, the Ministry of Culture changed the focus for "AM-transmission".Plans were discussed to place a new longwave transmitter on Gotland, a new medium wave transmitter in northen Sweden and a new medium wave transmitter in Skåne.

The medium wave transmitter in Hörby was unmodern and very torn. The technicians prayed every morning for it would start again....

Now finaly a new medium wave transmitter could be built. Regarding to ITU the location had to be in Skåne. But no acceptable place could be found in Skåne. Instead a small village, Björkenabben, at the very edge of the peninsula Listerlandet at Sölvesborg was found to be the best place and also accepted by ITU. And this was the beginning of Sölvesborg MW. The year was 1982.
When Sölvesborg was completed and put into service in the spring 1985, the old and torn 100kW transmitter was shut down and scraped together with the antenna.

1982 was an exiting year. Most of the old antenna system was taken down and replaced by modern curtain antennas from TCI. The new with these antennas you could ex. transmitt on "both" sides of the antennas. Later a small logperiodic antenna from Algon was set up in the antenna field mosty used for Europe and Africa on 6065KHz. During a sever winter storm in 1990's a hugh log periodic antenna on 75m high mast was blown down and destroyed. Around 2002-2003 DRM- test transmissions were done from Hörby with a small 10kW transmitter borrowed from Telefunken in Berlin. The tests were great successes.

In spring 2010 the ministry of Culture decided thar SR's transmissions on short- and medium wave would cease on 30th October the same year. The descition was taken on lies ex. Sölvesborg MW had been off air for three months. SR would receive and send any QSL:s anymore. How could then SR know how many really listened.

In fact the Ministry of Foreign affairs took back the annual allocation of 12,5 million SEK to SR for transmissions on short and medium wave. The reason: Incompetence and overconfidence on internet and a comming nation wide DAB-launch. You know what has happened with DAB in Sweden...

This came as a chock for the staff in Hörby. They weren't prepared at all for this. It was too short time to find someone else who could and wanted to transmitt as many hours as SR. 2011 the three shortwave transmitters were sold to Radio Netherlands Internationall and exported to Madagaskar for a new life. The antenna system was blasted with dynamite and the acres around the station building were sold.

Next article is about Sundsvall MW.
/Chris

Date: 2016-01-02 00:46:43 UTC
From: julian@hardstone.uk
Topic: 4616 Message: 4617

So, another MW powerhouse goes qrt in Europe, it was bad enough when Kvitsøy went qrt in 2006. The last few French MW tx will close next week when someone drives to them to pull the plug, and all D are gone from MW/LW. It looks like the F, LUX and IRL LW will close in 2017

I was looking back at the SW tx of LUX in the past. I used to use 6090 as an alternative to 1439. I see that the tx pwr is quoted both as 50kW or 500kW: the WRTH thinks 500kW but that seems unnecessarily high for a near-vertical incidence service to Europe.
Another strange one was 15,350kHz for the French service, listed as 10kW 24/7. I only heard this once or twice, and my guess is that it was beamed for Africa - any ideas?

It seems sad and we can be nostalgic, but they serve no real purpose in this century. We can't run QRO tx just for a few dx-ers ;-)

AFN 1107 / 1143 are still active in D

The band looks different since 1.Jan during the day.
Romania is now a dominant country here, along with UK

These now became audible during the day
549 IRL Spirit Radio, Carrickroe (MN)
549 SVN R.Koper/R.Slovenija 1, Beli Kriz (kp)
549 UKR UR 1 Persha Prog., Mykolaiv (MY)
756 G BBC R.4, Redruth (EN-CNW)
783 E COPE Miramar, Barcelona (CAT-B) (night)
864 IRN IRIB R.Kermanshah, Qasr-e Shirin (night)
873 HNG MR4 Nemzetiségi Adások, Pécs (Pec)
999 E COPE Madrid, Madrid (MAD-M) (night)
1206 ISR IBA Reshet Bet (B), Haifa (night)
now a clear channel for ISR !!

1278 G Pulse 2, Bradford (EN-WYK)
1377 G Asian Sound Radio, Ashton Moss (EN-GTM)
1422 ROU SRR R.România Actualitati, Râmnicu Vâlcea (VL)
1440 R. Paradise Ost-Belgien

I found this page, and the comments are most interesting, quite a few Russians heard it back then, the most funny one is this:
"I listened to music programs Radio Lux Benny Brown, while on military service in the Soviet Army in 1981-1983 . through military Receiver R- 250m . Hi Benny Brown! "

http://www.offringa.nl/radioluxembourg.htm

> Another strange one was 15,350kHz for the French service, listed as 10kW

I never heard it either.

> It seems sad and we can be nostalgic, but they serve no real purpose in this

I 100% agree. When listening to the replay of 208 last 2 hours on 31. Dec via
my speaker system I noticed how bad it sounds, compared to even a mp3 stream.
So MW was good at its time, but not in todays world.

In this article (German) the Lux operator spokes person comments:
1. the operating costs are overestimated by the politics considering the
coverrage area.
2. There seems to be the general media political attitude to keep broadcast
signals only within its own territory and restrict overspill as much as
possible.

I noticed that already on FM and TV here.

Hi!

I have reached the information that the landowner, Tonnie Rittstam, has bet to buy the closed radio station, this well known land mark, including masts and station building.

This is great news and I keep my fingers crossed for the station will be preserved for the future.

... and during disturbed conditions! This was also the case when we had our first reception of KBRW in Sheigra in 1985. A indices for the relevant days were in the 30s!

I was able to make a screen grab late yesterday evening,showing the carriers I had on 680:

680 12-01-15 (Evening & Early Morning)
https://app.box.com/s/5dxaphwb519uk3w7p7a0krtifqguugs7

See the carrier which goes very smeary - there were auroral conditions at this time. Maybe that's the KBRW carrier. (Offsets are approximate on this grab as no calibration was made against the BBC on 909)

I will be monitoring this afternoon, noise permitting.

In fact, I just checked - I have three carriers on 680, the strongest one coming in at -115 dB. I think it's just a navigational beacon. The offset is 679.680.002. The other two, weaker carriers, are at 680.009 and 680.024.

The three carriers I can see on 680 must be navigational beacons. I do not see much variation in signal. Also, the two other giveaway frequencies for Alaskan reception, 850 and 970, are not producing any carriers.

John.

Indeed I didn't expect the north pole path open due to the disturbance.
I checked a few remote rx, and Scandinavia heard a strong beacon, no KBRW. Only one Swedish Rx heard KBRW. Unfortunately the Rx in N.HOL was busy, so I could not compare with that

The offset is .000

Now I see a weak carrier again. Not sure who that is.
Normally it should have behind its peak here at this time

Interesting, Jurgen. Thank you for this.

I hear very weak murmurs of YL speech on 680 now. It sounds exactly like the YL on the audio. I can match the speech intonation. I hope this gets stronger.

I had to go out this afternoon, so I left Perseus monitoring the carriers on 680. This is this afternoon's result.

680 13-01-15 (Late Afternoon)
https://app.box.com/s/2ec1mhstvlwklaxpnxn2731wblr0ud4j

Looks like KBRW is the carrier in the centre - and it's peaking up now.

John

Thanks Jurgen..John

For the heads up on KBRW 680 I still wait for my first Alaska Station.

I compared what I was listening to with perseus in Sweden and the music was the same...the perseus in Sweden also had beacon on same frequency. That I do not receive.

some decent peaks audio did seem to match KBRW stream would be great for an ID.

Thanks guys

Cheers Mark

The modulation is quite low, that makes it a bit tough to hear.

KBRW is not that unusal here, each Dec/Jan I saw and heard it in the HOL
splatter. Now with HOL gone, it is much better to get some audio.

This season I heard it only once in Dec (at 1500z) which is unually rare, but
this season is very poor anyway. No chance to hear the west-coast until my noon
like in 2009 and other years

How do you guys do this?

I am 40 miles north of you John and I only have a carrier here. 648 is splattering all over too :(

Matt.

Hi Matt.

If you are just looking now, the carriers are fading right down. 680 is getting too much splatter anyway now from 684. 650 is hanging on but is now down below audio level.

What receiver and aerial are you using Matt?

I think my main advantage here might be the flag antenna. It's very directional and 'low-angle' in the way it receives. I can't really offer a technical explanation as to what that means, but the flag and the Beverage antenna have similar characteristics in that way. The front-to-back ration on the flag antenna is very good, so the reduction in signals to the rear and, to a degree, from the sides also, is very good.

I am using a Perseus SDR receiver, so I can narrow the bandwidth right down if I get any splatter from 648, but it's not a problem here.

As I type, I hear speech on 650 again. It's Greenland. Now the beats of some music, all in // with their web stream, but it's still very weak.

Correction - KBRW is returning! It really is very weak though. So weak that I am only able to make out the bass notes of songs in my headphones at the moment. It was clearer around 2100.

Hi John

I am using a Perseus SDR too and a Wellbrook loop!

I would love to build a flag antenna but I'm not sure I have the room in the garden where I live.

I heard audio last night around 1 am on 650 but I think that was WSM as it wasn't parallel with 590.

Regards,

Matt.

While the Wellbrook loop is a very good and highly respected loop antenna, it is bi-directional. The flag is uni-directional. The flag has a wide rear null and so removes a lot of unwanted signals from the rear, which the loop won't do. I wish my flag had the same gain as the Wellbrook loop too (I used to have one!). But I think directivity is the key here. We are both coastal and within a short distance of each other, so able to take advantage of the northerly path up over the North Sea and over the pole, so I think the loop is your problem.

What you could do is try to phase a longwire against the loop. This cuts off one of the loop's lobes. It's not particularly complicated to do, but you will need to do a bit of constructional work. I have one here which I am not using at the moment. You are welcome to borrow it. PM me directly if you are interested.

It's exactly on 680.000.000 apparently.

You can use this or the BBC on 693 and 909 to make calibrated readings.

Mark, I'm struggling to see TA carriers now, let alone hear audio. After what the sun has just thrown at us I suspect we can kiss TA DX goodbye for at least a few days.

Thank you Kjell-Göran.

I could see a carrier on 650 at times yesterday evening and I assumed it may have been Greenland. With so many beacons still on medium wave it is sometimes difficult to know without a good knowledge off carrier offsets.

I also see carriers on 700 kHz every late afternoon and early evening, but I guess this must be a beacon in the North Sea as the signal does not vary.

620 has also had a DX carrier in the early evening, but now we have the geomagnetic disturbance, so North American audio has disappeared completely here.

Good DX!

John

** Personal First (Skegness)

Local noise gone! Most of the time. For how long, who knows?

This is bizarre. Only yesterday I was going to move the flag back to the
far east position as medium wave conditions blew out, which usually
renders the North American continent a no-go area. Not this morning,
however. Signals were unstable, but quite a bit stronger than they have
been during quiet conditions. Everything was east coast, however.

What also amazed me was the amount of activity in the X band! I hardly ever hear anything in the X band lately.

Some usually splattered frequencies had more than one North American station. 1310 1380 1420 1430 & 1500 come to mind.

At 0600, I was very pleased to see decent signals on 1210, 1220, 1230 and 1240 and 1250, all of which produced audio. I just happened to find a quiet spot on Absolute Radio, who had broadcast almost three seconds of dead air! I got two very pleasant surprises in this silence:

1210 had two stations fighting it out. Clearly the dominant one was VOAR with a snippet of inspirational music. Praise the Lord! I can only guess the other was talk station WPHT Philadephia. These two would be regular stations again were it not for the immense splatter produced by Absolute.

1240 was the real gem and, yes, it's an ID based on a time signal. I could hear rather odd Chinese time pips on the hour. They were badly produced and sounded like somebody had been pressing a button to produce the time signal, such was the character and uniqueness of the tones. It had to be a North American station with Chinese ethnic programming. Topaz to the rescue! Four ethnic stations are listed on 1240, only one of which was Chinese. WGBB Freeport NY. I located their web stream and recorded their top of the hour ID. Bingo! The very same time signal in all its disjointed glory!

Come the afternoon I moved the flag antenna over to the far east position. Hardly anything from that area was audible, but VOA Thailand still managed to put in a decent signal. Nothing stops that transmitter getting out!

So, a very pleasant return to medium wave DXing!

Good DX!

4653. 680 CJOB Winnipeg in N.Germany

Yahoo group: skywavesmw
Date: 2016-01-24 23:24:18 UTC
From: Jurgen Bartels
Topic: 4653 Message: 4653

Last Thursday morning my DX guest recorded all night and found on 680 CJOB Winnipeg. A rare catch but should be easier now since 675-HOL has left.
Usually CFTR Toronto is regulary heard on 680 here, but was totally absent at that time.
So I plotted the path to both sites as seen here:
http://dx.3sdesign.de/unid/path-Winnipeg-Toronto.htm

It immediately caught my eyes that the Winnipeg path crosses Greenland and I asked him whether KNR also peaked at that time.
He confirmed my assumption, although KNR was heard most of the night at weaker levels, but that happens on many nights here.

KNR is back this evening on 650. Good to see conditions recovering so quickly.

This afternoon, I probably had the best signal from KBRW so far this year. I was away from the receiver and left Perseus monitoring carriers on 680. There was a fair strength carrier in the right place so it looks like I missed some decent audio levels.

I will be looking for 680 CJOB overnight. Thanks for the tip Jurgen. I wonder hat their offset is today. I have their 2014 offset, which is more or less spot on frequency. so I will be keeping a lookout.

I am not sure if CJOB were around this morning. There was a carrier on 680 around 0300 at near audio level, on a band which barely had any other North American DX.

Thanks

John

That one is often quite good, much better than 570. Don't know why.
Perhaps lower power?
650 was audible this morning as late as 0800z

I haven't measured any offsets this winter, just doing a bit causal listening
due to lack of time.

Odd in this season:
This winter 1400 Harbour Light comes in very often, while it was rare in
previous seasons.
But therefore 1520 Buffalo is rarely audible while it was a pest in the past.

600 CBNA is much weaker even when 590 and 750 come in well

Hello Jurgen.

I didn't know 570 KNR had been reactivated too. There hasn't been any trace on 570 recently.

Conditions recovered some more overnight but North American signals were still weak - but there were more of them. Presumed 1120 KMOX would be the best here.

Presumed Greenland here too at 0800 on 650 with low, muffled audio.

These were my 680 carrier measurements at 0400 this morning.

1. 679.987
2. 679.991
3. 679.992
4. 679.994
5. 679.999
6. 679.999
7. 679.999
8. 680.001

Screen grab here: https://app.box.com/s/518mu0xbhcwodjh0a21n9yqoyqmfnwmf

BBC 909 being my reference again - reads .005 high (offsets above adjusted), so you'll need to subtract this from the figures displayed in the screen grab.

KBRW was playing music back to back, and started relaying NPR short before I
went to bed. The music made me aware of KBRW, who else plays music on MW.

No John,
I went to bed right after my email.

But KICY would be possible, it's one of the Alaskan that came in here when KBRW
got stronger.

Thanks Jurgen.

I stuck it out for another hour but 850 dropped into the noise straight after I posted. Nothing much east coast was audible when I heard the YL, but east coast regular s had appeared an hour later. I heard KICY in 18-12-2010 at 1818 when KBRW was coming in well.

Back to KBRW - I heard a mention of All Things Considered and NPR shortly after I posted, so 100% KBRW - once again!

I should have gone tot he Beverage overnight but tiredness won. Now to my recordings!

I did not set up the beverage this season.
Too much work and I need to take care of it, which I don't like.
The EWE works quite well, only the front lobe is wider. But since most pests have closed, I don't need that narrow lobe anymore.

4666. Optimize EWE- F/B (JB-terminator)

Yahoo group: skywavesmw
Date: 2016-01-31 13:30:40 UTC
From: Jurgen Bartels
Topic: 4666 Message: 4666

Most DXers use a simple resistor as the terminator on a EWE antenna to get it directional. However the F/B (Front / Back) ratio is frequency dependent. For wide-spectrum recordings (like Perseus) you need good F/B over the entire band simultaneously.

EWE terminated with a simple resistor achieves maximal F/B only for a specific size and at a specific frequency.

Read more about getting it all under one hat by building the JB-terminator
http://dx.3sdesign.de/optimize_ewe_fb.htm

I presume your termination method will work equally well with a flag antenna? I used to have a similar termination system which broke over time, made for me by Julian. Nulls were deeper with this.

Even with my single variable resistor on the flag termination I find that, once set, the null seems equally good for the whole of medium wave.

Also, I am curious why you don't use the flag. I was surprised when I changed from a ewe to a flag. Directivity was much better with deeper rear nulls.

I guess so.
But better verify it in a simulation

A return wire (ground replacement) is out of question, since cattle graze underneath it, and a tractor must be allowed to pass under it. That also forced me to develop the dual-feed mode, because the feed just sits on the far side and a coax running back to the house was no option.
Burying it into ground is senseless, as the animals would destroy it sooner or later.
On the positive side: This large EWE size picks up very well signals down to 12kHz

BTW: the complex termination does not work with beverages.

4678. Jaguar

Yahoo group: skywavesmw
Date: 2016-02-29 20:43:41 UTC
From: John Faulkner
Topic: 4678 Message: 4678

There's been a short discussion about Jaguar on the Skywaves forum and was directed to "Jaguar Lite" at http://jaguar-lite.blogspot.co.uk/.

I like this software. I'll paste in what I wrote on the bb forum, but I see some great potential in this project. I hope somebody has more information about where I might try the full version, if it is available.

It's working - and it can even play the same file at the same time as Perseus!/ .. (instant comparisons)/

The audio is processed. Sounds like some kind of noise filtering but the Perseus audio actually sounds better, which is saying something! I think HDSDR istheapplication for medium wave DX audio - always crisp and clean.

I couldn't see any was of running Spector, so I presume this is only possible with the 'full' version.

I like it though and I can see potential. It's very different to tuning with the Perseus. The write-up suggests it's the bee's knees,or the dog's whiskers, whichever you prefer, but I can't rate the audio as anything special. It does have a 'nice' sound though. Shame I can't alter the bandwidths and have a further play.

I think this shows there is further potential for greatly improving the interfaces we use for our medium wave DXing. One of the things which would hugely improve medium wave DXing for me is the incorporation of a splatter filter, such as Jurgen's "Splattaway" and a good level of 'clever' audio filtering and noise reduction. Therearеways to clean up audioifit's done correctly. All filtering I have used for medium wave DXing over the years inevitably results in degraded, scratchy or 'woolly' audio and without any real improvement to intelligibility.

There is a lack of useful low frequency response in Jaguar Lite. I guess this is because I am only using the limited "Lite" version. This might explain the lesser audio quality. I think that a simple graphic equalizer could be useful in something like this too, to boost the frequencies of speech, for instance.

It was pointed out that the 'bubble' gives a very precise offset measurement of the received signal. 909 5 Live comes in at 909.005.5, conforming my own findings, although I wouldn't have dared to try to look lower than 1Hz accuracy.

If only I could try the full version of this. It would be so useful for obtaining instant offsets and many other things. Does anybody know if a full version is / will be made available soon?

Thanks

John

4681. Docu: The Russian Woodpecker

Yahoo group: skywavesmw
Date: 2016-04-29 18:17:59 UTC
From: Jurgen Bartels
Topic: 4681 Message: 4681

Arte-TV showed a Docu / Conspiracy feature about the Russian
Woodpecker transmitter Dagu near Tschernobyl.
https://en.wikipedia.org/wiki/The_Russian_Woodpecker
https://en.wikipedia.org/wiki/Duga_radar

Although some conspiracies are very stupid, there's a lot of other
interesting stuff in it.
For example US-TV news clips from the 1970s claiming that this tx is
not an OTHR but a high power transmitter to turn human beings
(Europeans) into zombies. What a joke. Just US xenophobics, not
news as one would expect.

But the tx also jammed Sowjet services, so they changed frequency,
but then it would not "cross the polar region anymore due to polar
lights". Not sure if a frequency change would have been the reason.

The docu can still be viewed online until next tuesday,
but only within Germany and France. So use a proxy in D or F

http://www.arte.tv/guide/de/061670-000-A/der-russische-specht

Never have I seen an OTHR featured in a docu for that long

4690. Luxembourg effect.

Yahoo group: skywavesmw
Date: 2016-06-21 21:17:52 UTC
From: Martin Payne
Topic: 4690 Message: 4690

Hi list,

I've been having a listen on Long Wave recently (while it's still here to listen to), and I'm noticing the Luxembourg effect a lot more than I previously did. I'm not sure if it's become stronger, or if it's just that I'm more aware of it (probably the latter). Specifically, France Inter on 162 KHz can be heard superimposed on quite a few other stations. It's particularly noticeable on 216 KHz, where France Inter can sometimes cause RMC to become unintelligible. It's also somewhat noticeable with Algeria on 252 KHz, and Europe 1 on 183 KHz. In fact, I've even heard France Inter audio in the background of some of the Spanish MW stations at the bottom of the band. I've certainly never spotted that before, but then I may have just dismissed it as co-channel interference.

Are there any other frequencies where the Luxembourg effect can be observed? I've only noticed it with France Inter, but there are still some powerhouses on LW and MW so I'm sure it can't be the only place where it's happening.

I did find what initially appeared to be an interesting video about the Luxembourg effect, but it turned out to be a conspiracy theory about the Earth actually being concave, and that ionospheric heaters are used to seal cracks in the sky (which is made out of glass)!

Regards,

Martin

That used to a severe problem here when all the other LWs were on
air.
There was no LW channel without Lux effect during darkness.
I have posted that a few times the last several years here and on
mwdx

You can easily get good audio when tuning to the control tx below 153
kHz. Notch out the carrier (or just reduce it) and you hear it loud. It
depends a bit on your QTH location.

Jurgen Bartels Suellwarden, N. Germany
Ant. hor: 29-45MHz 7-el, 45-87MHz 11-el, FM 15.11, Band-3:13-el,
UHF:48-el

Here is a video of Theo and his legal R. Tpot on 747
http://semsland.nl/welkom-bij-am-radiostation-t-pot-uit-gasselternijveen/
All in Dutch.

He even indirectly mentioned me receiving it by saying it has been
heard in Wilhlemshaven, and that he heard his own voice back.
I had sent him the clip in mid June of his test transmission.

The webpage states he even broadcasts in stereo C-QUAM

4705. Radio Sweden on 1179 this evening?

Yahoo group: skywavesmw
Date: 2016-09-24 23:46:04 UTC
From: John Faulkner
Topic: 4705 Message: 4705

https://youtu.be/CwE1Q3ntQpY

Here's an unusual one.

This evening at 2100, I heard Radio Sweden's interval signal on 1179 kHz. This is long after they have vacated the frequency. Was I hearing a ghost transmission? ;O)

Checking MW List, I found a station in Sweden called Hörby Mellanvåg 1179 from Karlsfält (5 km S of Hörby). They have a listed power of 0.005 kW! That's just half a watt!

Two questions:

1. Would Hörby Mellanvåg 1179 be carrying Radio Sweden's interval signal?
2. Are they really using half a watt?

Thanks.

John
Skegness, Lincolnshire.

Hi!

It's possible since 1179KHz is active this weekend from the radiomuseum in Hörby.

4711. Re: [SkywavesDX] Radio Sweden on 1179 this evening?

Yahoo group: skywavesmw
Date: 2016-09-26 21:01:48 UTC
From: John Faulkner
Topic: 4711 Message: 4711

I emailed Radio Sweden to tell them of my reception. I wasn't wanting a QSL card, but this was their reply, received in just a few hours:

Hello John,

Thanks for reception report and recording of the interval signal at top of the hour. Great! QSL will be sent by post.

Power output is only 2,5 W EMRP calculated from measurements made with a calibrated field strength meter at 1 km distance according to standards. The antenna is a 12 m top loaded vertical with 4 pcs 30 m long top wires and 4 pcs elevated radials 56 m long and 1 m above ground. Station site is the same as the very first medium wave transmitter was located in Hörby, built 1928. Ref to the b/w photo.

We plan to have the transmitter running until mid feb 2017.

Best Regards
Bengt Falkenberg

2.5 watts one metre above the ground? Wow!

Receiver was a Perseus SDR, standard sized (3m x 7.6m) flag antenna on the garden with pre-amp and Jaguar v2.6 software.

John

Hi Alan yes can be quite different. My flag is pointing north which probably also makes a bit of a difference. Still going through recordings of the 28th and 24th quite exciting

Hello Pat.

Now the medium wave is becoming quieter and quieter as the European powerhouses are leaving the band, some 9 kHz channels have opened up very nicely. I guess this will be the same for you.

Because I live on the east coast, stations from the Far East are often received on-demand. Some of the bigger transmitters are making it across the rest of the UK too.

Some of the 'big guns' like CNR11 from Golmud on 1198 amd HLAZ Cheju Island on 1566 are blasting through like locals.

Here's my Asiatic log of the Asian stations I have received here on the east coast. http://www.g1vvp.co.uk/mw-log-skegness-cumulative-asia.php.

Some recent recordings:

https://www.youtube.com/watch?v=NQAFfvjsdDg 1377 CNR 1, Xingyang
https://www.youtube.com/watch?v=vbU1qcC7w98 1143 BEL3 Taiwan Chü Yuyeh Kuangpo Tientai, Baisha

4718. China on Medium Waves

Yahoo group: skywavesmw
Date: 2016-10-07 21:14:41 UTC
From: Fast Logger
Topic: 4718 Message: 4718

Hi, John and all members !

Starting at 20:25 GMT, I got CNR 1 (China's domestic radio channel 1) on 1377 khz MW.
Reception was very bad on my old Icom 75 coupled to the battered Wellbrook 1530.
The portable "pocket" Tecsun PL380 was much better with the AN-200 Loop.
I will post a video capture tomorrow.
The parallel on SW was 4800khz which started at the same time.
Apparently it is the transmitter in Xingyang, Henan Province.

Patrice

That's great Patrice! :) Glad to see you are off to a good start.

Did you also hear CNR1 on 1539? That's the Golmud tx. If you hear that
you could also try for CNR11 from Golmud on 1098.

Good DX!

John

4722. India this afternoon on MW

Yahoo group: skywavesmw
Date: 2016-10-25 21:05:34 UTC
From: Paul Logan
Topic: 4722 Message: 4722

Hi all,
getting back into MW DX a little.
Took my Elad FDM S2 / laptop to the park this early evening and laid out about 200 feet of wire between two posts at about eight feet height running east west. Made some recordings and have managed to bag a few new ones from India.
747 was especially good at times with 1071 sounding huge.

Will be interesting to see what more the files turn up, here is some of what was logged:

* New one for me

*603 1715 IND AIR North Jaipur, Ajmer (RJ) Yl song with fast tabla // 747 4440 km
819 1720 IND AIR Indraprastha Channel, Delhi A (DL) yl song // others, sometimes good 4417 km
*846 1720 IND AIR West Ahmedabad, Ahmedabad A (GJ) YL song under local 4551 km
*954 1720 IND AIR North Najibabad, Najibabad (UP) Yl song under Czech R 4420 km
1071 1720 IND All India Radio GOS, Rajkot (GJ) Indian music dominant, excellent at times 4486 km
*1080 1720 IND All India Radio GOS, Rajkot (GJ) Almost got this to start decoding! 4486 km
1098 1720 ARS SBC Radio Jeddah, Dammam (shy) yl talk 3453 km
1134 1720 KWT Radio Kuwait Main Arabic, Kabd/Sulaibiyah (jah) News report from Baghdad, ID 3222 km
*1143 1720 IND AIR, AIR yl song two possible locations both 20 kw 0 km
*531 1721 IND AIR North Jodhpur, Jodhpur A (RJ) YL song // others, buried in mix 4381 km
*585 1721 IND AIR West Nagpur, Nagpur (MH) YL song // others, same level as Spain 4902 km
648 1721 IND AIR West Indore, Indore A (MP) YL song // others, dominant, good 4691 km
*720 1721 IND AIR South Chennai A, Chennai A=Madras (TN) YL song // others, under Belfast 5383 km
747 1721 IND AIR North Lucknow, Lucknow A (UP) YL song // others, sometimes very good 4669 km
918 1721 IND AIR North Suratgarh, Suratgarh (RJ) yl song in mix // others 4262 km

Well worth the effort and the cold toes :-)

Good Dx to all.
 Paul Logan, Lisnaskea, N. Ireland

Fantastic Paul!

I had written off this afternoon's/evening's files due to the conditions, but but I never checked 'between' the hours. I think all the frequencies you mention were coming through here, but barely. I hear the same YL singing on several frequencies. Another problem, I barely have time to fart at the moment. I will have to come back to this later or in a couple of days, but I think you are beating me on signal strength by quite some margin. Isn't mobile DXing fun?

1071 is a pest here. It always romps in.

You might like to look for Pakistan, Bangladesh, Afghanistan and Myanmar (or whatever they call it these days. I still think of it as Burma). Also try for TWR Sri Lanka on 882.

Good DX!

John

Instead of 1404 they use 1071

Now I wonder why.
To tease the Brits? :-)

Some areas of Talkradio must experience more noise now.

Actually, one could argue that the channel had been appropriated by the Brits. I recall the old ORTF had a Paris outlet on 1070 kHz, way back before the "new" frequency assignments; I don't remember whether that signal was still on when everything shifted up by 1 kHz.

4746. 162 kHz with strong Lux Eff audio

Yahoo group: skywavesmw
Date: 2017-01-01 11:22:09 UTC
From: Jurgen Bartels
Topic: 4746 Message: 4746

The audio of France Inter was switched of right at midnight.
From then on I hear on 162 very strong 234-RTL, and 183-Europe1.

The "Luxemburg Effect" finally came back to its original.

Just had a listen again and first thought RTL is now being carried, the audio is close to excellent, only a bit weaker. But checking other remote Rx's it is clear 162 does not transmit any audio.
This was just recorded at 1100z
http://dx.3sdesign.de/unid/162-Lux-Eff-RTL-Europe1-170101-noon.mp3

This uses 8kHz BW, and I switch briefly to 234 and 183 in between
http://dx.3sdesign.de/unid/162-Lux-Eff-RTL-Europe1-170101-1208.mp3

Surprisingly Europe-1's audio is much weaker, despite their tx sites are not very far apart from each other.

The 162 Lux Eff. can he heard in a wide area accross Europe via remote rx.

Thank you Jurgen.

KBRW in here now too.

KBRW put in reasonable signals yesterday evening too, from around 2200
to 0100+. Audio was clear at times.

Other ones worth checking are KICY 850 (which I logged tentatively
yesterday evening around the same times). Also CFFB 1230 has been
tentatively heard here recently with programming seemingly in // with
CBC North. I just need a little bit more signal to be certain on these two.

Good DX!

John

John,
check out 1280 CFMB Montreal
until 2155z it runs on day power, and comes in very nicely.
Saturday it was the strongest of all Candians. After the switch it is very
weak. One reason is the antenna pattern change.

KBRW didn't last long after I posted and it was weaker than the previous evening.

I didn't begin recording until almost midnight yesterday evening so I can't check back for CFMB, but I agree, CFMB can boom in on 1280 before 2200, and no wonder with 50,000 watts omni day power!

The geomagnetic indices have risen slightly so I have been hoping for enhanced signals from the south.

I am listening to two *very* weak signals on 901 at the moment. One is almost certainly Iran (and it fits the offset perfectly). The other is playing modern style pops. Both can be heard with a little more clarity on an Austrian SDR. I have no IDs or clues for the second station but the offset is slightly higher than the presumed Iranian.

Thank you Jurgen.

I forgot about the UAE server. I have been trying an Austrian SDR this evening.

Presumed Iran dominates both 891 here and also on the UAE SDR.

I will keep monitoring as and when I can.

Regards.

For me, I haven't received Lesotho yet. :-) This would be a new country for me.

Also, I believe such a logging would be the first recorded instance of Lesotho 891 being received in the UK. So it's quite a prize at the moment.

John.

Thanks Jurgen.

The carrier is now going smeary. I see that a geomagnetic disturbance has just begun.

Also, do you see / hear anything on 920? There's a fading carrier present here and I was wondering if it could be KSRM. Maybe you have something stronger.

John

Hi John,

> The carrier is now going smeary. I see that a geomagnetic disturbance

> has just begun.

The Alaska carrier did not get smeary.

See below,

until 2006 I tuned to 891, LSO came in quite good

from 2006 til 2045 to 680

and then back to 891

on 891 there's a smeary carrier,

first I suspect the disturbance. but the smeary one stopped around 2102, that's the normal stop time of ETH, I did not see their carrier on the usual offset. So I am not sure what actually cause the smearing.

An dit wasn't there at 2006.

All times are UTC+1

The magnetometer plots:

http://flux.phys.uit.no/cgi-bin/mkstackplot.cgi?comp=H&site=lyr2a&site=tro2a&site=kar1a&site=roe1d&site=gdh4d&cust=+Custom+%28above%29+

> Also, do you see / hear anything on 920? There's a fading carrier

> present here and I was wondering if it could be KSRM. Maybe you have

> something stronger.

I did not check that. It never came in here during the good seasons.

780 and 820 are much more likely. But they never even showed a stronger carrier here this and last season.

Last night & this late morning I heard almost all Alaskan tx on the rx in N. Sweden. Also 1500-Hawai came in nicely, its fading pattern was quite intersting.

Thanks Jurgen.

Not sure then why the carrier was smeary here. Probably because of the excellent rendering in SpecLab. I believe there are going to be some improvements in the carrier display in the next Jaguar release, but SpecLab is a force to be reckoned with, as some people might say. I never mastered SpecLab as you have.

OK on KSRM. The next most likely Alaskan here has always been KICY Nome 850, which I have heard at least a couple of times. It's been the same in Scandinavia when I have looked at the MWLIst maps. Always KBRW and KICY. In recent years, KFBX 970 may have been there, but the carrier never increased enough to hear audio.

Thanks for the magnetometer link. I have bookmarked this. I know of other UK DXers who are using the Tromso figures now. I have always used Kiruna http://www.irf.se/Observatory/?link[Magnetometers]=Data/ I don't know what is to be gained by using one over the other. Neither of them are at my own latitude.

Thanks.

John.

In 2009 I even heard 780-KNOM simultanously under WBBM Chicago.
First I had to listen twice to believe that. It was in the morning, and I
did not expect anything from Alaska then.

> Thanks for the magnetometer link. I have bookmarked this. I know of

The one I gave you contains the plots from several different areas
from north to south. That shows me how far south the effect goes
down. You can specify your own selection, click on "menu"

It's more useful than just N.Norway (I hope)

I see Brorfelde is much closer to home. But I suppose this doesn't matter too much if conditions are disturbed. The further north the magnetometer, the greater the disturbance reported by the station. So maybe the 'nearer' figures are irrelevant.

The Alaskan signals have further to travel to reach me than they do to reach you = more potential disruption to travel through. But I am lucky to have more of a sea path to Alaska than many other places in the UK. This makes a big difference here. See attachment. KBRW is often received midwinter here. I hope the forthcoming solar minimum will produce more Alaskans for all of us.

John

Hmh?
The distance is basicly the same. Your plot also shows that.

> to have more of a sea path to Alaska than many other places in the UK.

And also Hawaii, in 2009 I once heard 1500

Yesterday a DXer east of the Belgian border only saw a weak 680
carrier while I heard it with fair audio. The coast proximity is essential.

John and Jürgen,

I have followed your conversation about signals from Alaska with interest. I live in Långserud, about 40km north of Åmål in JO69HF, in the countyrside. The noise level is very low and I enjoy MW DXing. Maybe not as intense as you but still listen almost every day. My antenna is a KAZ 5/20m pointing to NA.

I have a carrier on 680 almost every afternoon but have never heard any audio. I'm a bit surprised what can be heard in Germany. I thought that 1000km north would be a better listening position but it doesn't seem so. I'm happy to read your comments on each other loggings to learn something new and to get new frequencies to tune in to!

Thanks for the info shared in this forum!

That's an interesting question indeed.

Mauno and myself have often compared the KBRW reception & conditions.
We noticed several peculiarities:
1.) In the afternoon it often gets enhanced at the same time at both QTHs, and that is short before my sunset. So why not at sunset in FIN?

2.) Often I have it (and other NAm signals) strong when there's nothing in FIN and even in N.Sweden.

Günter kindly compiled a list of all KBRW logs ever made to VLB
http://dx.3sdesign.de/temp/KBRW_680_entire_myAM_logs.htm
So basicly it has been heard at parts of the Northsea coast.
Unfortunately many don't log to VLB at all, so the picture is not complete.

3.) Often I hear KBRW again soon after a geomagnetic unrest, a bit too early in my view.

Mauno told me from his many observations with other signals, that there exist 3 different regions. Lapland behaves very different than mid Finland, and that is different to my QTH.
The first coincides with the auroa oval. Lapland sits inside it.
And we now realized that KBRW also sits inside it.
That reverses the situation for us southerners, the TX is inside and the DXer way to the south. Typically Lapland DXer listen from inside to tx outside of it. This makes it fascinating for us to study the KBRW propagation properties.

That would explain a lot of the observation we made. And it also explains why very little other Alaskan tx make it through. The few more 100's km are not just an extra distance but must overcome the oval border.

Thanks Jurgen.

I don't have your server details.

I am juggling radio and work this afternoon, so my listening time is limited.

However, there is still nothing from KBRW, but my 'afternoon noise' has settled in, as it does most afternoons recently. Midwinter tends to be difficult here. This time last year I had S9+40dB of band-wide noise for six weeks in the middle of winter.

The noise should stop around 1800 so I will try again then.

Thanks.

John.

John,

> I don't have your server details.

just click on the server map, nothing special

It seems the level has gone down quite a bit, not audible now.

The UK 693 Tx is horrible, its splatter stretches down to 675 !!!!

Why can't UK tx operate properly within specs ?
Worst than old Russian gear. Or did they buy from there?
Go to Luxemburg and learn how to properly filter your spectrum on
high power tx!

Hi Jurgen,

Very interesting info! I suppose we like MW DXIng because propagation is so different from higher frequencies and to some level unpredictable. I checked 680 this afternoon and saw that the carrier was nice and strong before sunset and gradually weaker as the evening progressed. At best it was around -100dBm, approx 20-30 dB above the noise level. No audio though. I will continue to monitor it.

Unfortunateley I don't have the Perseus so I can't share my receiver with you guys. I used to have one but I switched to the ELAD FDM-DUO to have a single unit for both DXing and ham radio. I do mostly DXing though.

I finally caught them! But it was a real struggle.

For an hour or so, I listened to the web stream via the Kiwi server in South Africa. I managed to hear several songs which matched the web stream.

The last and most convincing song was something I did not expect to hear on a station which plays soul and rap music like LNBS - Celine Dion's My Heart Must Go On!! That song, as much as I detest it, will now bring back happy memories, so it will be less unbearable in the future.

Celine Dion's penetrating vocals managed to pierce the airwaves. Persistence paid off in the end.

Good DX!

John.

From: Jurgen Bartels
Topic: 4793 Message: 4793

Yesterday I finally got the idea to rotate the ALA a bit so that Africa gets into the null. That reduces ETH and LSO to very low levels, that I now can hear the audio of Ningxia RGD News Radio.
And most likely also the audio of Thailand. I haven't yet IDed it positively

Strange that ETH and LSO have become "pest" stations on my EWE, while others consider these as DX. :-)

Unfortunately the EWE has a wide front lobe and not deep nulls at +/-90°
The ALA now points in excactly the same direction.

Conversely, I think we in the UK are finding it strange that Lesotho and Ethiopia have become such regular visitors in mainland Europe! :-)

The main interest here is probably the distance, not far short of 10,000 km right here. Plus it's probably a new country for many of us here.

I had considered that I would be in with a better chance than most here, living so close to the sea. You would smile if you heard the signal I had here. It was pitiful! I still have the videos and I will make a compilation when I have time.

No sign of Ethiopia here on 891 either. Africa is not my best direction, but the north-east *is*. I hear Ningxia RGD and Thailand on 891. Like yourself, the latter is without an ID, but the sign on times and offset match perfectly.

Good DX!

John

Actually it is mind boggling that LSO comes in here so well and so regulary with 9400km while other tx at shorter distances but different angles are much harder to get. Perhaps has to do with the almost exact southerly direction from here?
Ok I just see ETH & LSO both have 100kW, that would explain a lot.

But Ningxia RGD News Radio runs 200kW and is weaker here despite the shorter 7100 km.

> I had considered that I would be in with a better chance than most here,
> living so close to the sea. You would smile if you heard the signal I

For Africa I am actually on the wrong side of the coast, the path runs over land. But that doesn't matter much. Seems the ground never gets touched

> No sign of Ethiopia here on 891 either.

That's odd, here it is always the strongest

Try changing your antenna direction sligthly, Africa may sit in your null? Or use another antenna for a test.

On 1389.980 I have audio and it's in parallel with Rádio Jornal's web stream at http://radiojornal.ne10.uol.com.br/aovivo/pesqueira/web.html

A personal first and quite rare it seems. The wide offset gave it away.

Commercials, a jingle and Portuguese OM heard.

Good DX!

John.

Around 0000z when doing the final quick scan
I heard on 760 ZYH588 Rádio Uirapurú, with excellent levels.
couldn't believe my ears.

Everything else was from NAm.

The last stations faded around 0900z this morning.
Some started to pop up only around 0820

I didn't hear that. I re-checked 760 and there was a carrier right at
the centre .000 but it was just below audio level. That peaked around 0030.

The most consistent Bnrazilian here is usually 740 R Sociedade da Bahia,
but that was not heard.

I had moved my flag earlier in the evening so I could hear KBRW, which
had very weak audio around 2100, so I was surprise to hear anything from
Brazil. Conditions must have been just right. Reception of these signals
coincided with a minor rise in the geomagnetic indices.

Interesting that the lower MW has some surprises in the later
morning. When I think that's it, and try again 20 mins, there are some
which I hadn't heard before. WCBS, and WABC are such examples.
Last winter that did not work.

So monitoring until the last one is gone, is my main focus now. And I
can do it while working.

There have been some unusual surprises recently. The morning of the 15th February saw my usual (east coast) early fadout, but there was a cluster of frequencies around 1300 kHz which carried on longer.

More unusual has been the appearance of a regular sunrise fadeout period. As I understood, the sunrise period should see some enhancements towards the Americas. My second and third attachment shows typical mystery fadout periods from a few weeks ago. This 'dropout' has largely disappeared in recent weeks. What can be causing this?

John

> So monitoring until the last one is gone, is my main focus now. And I

Yes, the great thing about SDR DXing. But I tend to fall WAY behind with these and I don't always have time. There's nothing to beat realtime DXing and alerts, but it's 'delayed or nothing' for me lately.

I hope the attachments come through. I'll repost to my Box account if not.

From: kugellager@...
Topic: 4804 Message: 4804

Hi all. Longtime no post.

My family and I will be visiting Paris for our spring holiday in a few weeks and I was wondering if it was worth packing my Tecsun PL-380 with me? The radio has been modified with an added 3.5mm(1/8") jack to allow me to plug in an external long-wire antenna while still being able to use it with the internal rod antenna when I want.

We will be in central Paris (6th) and I was wondering if there is anything to DX since the local MW stations are gone? Will all the local noise swamp overload everything else out?

Cheers,

John

A new SDR receiver by Elad is on the way: Elad FDM-S3. It will see and record to 24 MHz band span. Great for FM DXers but not only:

Date: 2017-05-05 13:07:20 UTC
From: simbeav@...
Topic: 4807 Message: 4807

Anybody else hear and / or have an explanation of a brief broadcast between 02:21 and 02:26 on 1350 last night ?

https://app.box.com/s/as5qwemskdpbp3a1fvc7zlrz7nvc0s7f

It sounds like Romania to me, but I'm not certain. It was very strong here in South Wales.

A keying error ?

This is really interesting Peter.

Usually, you have far better results than I do, yet this morning I heard several North American stations. Nothing exciting, but WBBR 1130 was probably the best signal. There was nothing from regulars on 1500 WFED, 1510 WMEX and 1520 WWKB. Even 1560 WFME was a struggle. But audio was also detected on 1010, 1310, 1350, 1390 and 1600, plus a few others I can't remember. All very weak.

A DX tip - 1143 BEL3 Taiwan Chü Yuyeh Kuangpo Tientai from Baisha has beenm audible well recently and I heard their distinctive time signal and usual top of the hour ID routine at 1900, 2000 and 2100 yesterday. Here's a recording of the station ID I made in 2015
https://app.box.com/s/8ri6mjby3h4082806vn44uwvley5xqin

Thanks for sharing Peter.

John.

It's been a weird season. We should be climbing down to the next solar minimum and enjoying improved (to some degree at least!) higher latitude reception. i.e. North America. But it's not been the case at all. The sun has thrown out uncharacteristically large amounts of solar debris. Recent events have been the highest since the early 2000s, but it's starting to quieten down a little now.

Over the few days, it's been the Far East which has improved the most here. North America is definitely getting better, but it's still a struggle.

I see you use a 100 ft longwire. I remember when I used to DX with a longwire. I struggled to hear anything from North America back then (late 70s/early 80s). European signals were the problem, easily squashing the adjacent North American channels. It wasn't until I changed my antenna to a loop that I began to hear North American signals. Then the flag antenna made big improvements. Do you have the room for a flag? I'm sure it would make a substantial difference to your DX reception.

John.

A DXer in mid Germany also used a longwire and complained about
poor cx.
I convinced him to set up an EWE, he did that, actually he set up
3 of them, all in different directions, and was *very* happy about the
much better reception.

You could also use a 1x1m frame antenna, that is far better than a
long wire

Hi maunoUsed list MWLIST quick and easy: Europe, Africa and Middle East

Have attached recording made of prog. First minute music then female vocalist..Play on windows media player
On re-looking at list I see TRT is listed as well.....missed this one out,,,HI, so probably is it...ooooops

Excellent signal Mark! :-)

Nothing here at that exact time, but I suspect KGA was there most of the morning as I had a Fox Sports station on .988 with Pacific time checks. This matches KGA reports from Europe this morning.

Good DX!

John.

4875. Lisnaskea NDB Log Late September - Oct 2017

Yahoo group: skywavesmw
Date: 2017-10-23 15:39:51 UTC
From: Paul Logan
Topic: 4875 Message: 4875

Hi all,
been revisiting the joy of NDB hunting of late both in real time and on old Perseus recordings. Boy am I glad I held on to them, I now have a slew to run through from "quiet" atmospheric times back in 2009.

Greenland's OZN on 372 khz thumping in brings back some very pleasant memories.

here's what has been heard of late:

Listening Report for Paul Logan
Location: Lisnaskea, IO64gg

Equipment
Receiver(s): Perseus SDR
Antenna(s): EWE, Long Wire

YYYY-MM-DD UTC	kHz	Call	mi	Location

4880. KBRW now / Windturbine noise

Yahoo group: skywavesmw
Date: 2017-11-05 17:44:52 UTC
From: Jurgen Bartels
Topic: 4880 Message: 4880

Just checking how if I ever could hear KBRW again in the evening, I found it audible right now. Hadn't expect that in Nov.

Now a new windpark with 6 x 2.2MW turbines has started 1km away, right at the side of my NA antenna lobe. Another 3x 2.2 MW is 3km away in the lobe center.

All generate a 4kHz comb maxed around 2MHz which even stretches into lower MW during daylight.

I can hear the 4kHz comb from all turbines, even older ones, in all directions now. Until now the older park sitting at 90° antenna diection was not a real problem.

The tower is 80 / 100m high, that acts as a perfect halfwave radiator, thus the max around the 160m band and can be heard further away.
Poor design !!
There's no more spot on our penisular without it.

Another wide noise bump is in the lower MW, along with weak hash on the remaining MW band,
Weak NA signals in the late morning will be impossible.

So I am a bit glad that evening signals are strong enough to get over it, along with Alaska

From: Fast Logger
Topic: 4885 Message: 4885

Thank you for your wonderful work, Mister Bernardini.

I have (acting on your tips) heard Horn of Africa music on 918 shortly before 17:00 UTC on 918 khz (so Ethiopia !!).
It's a major breakthrough to East Africa for me this season.
Last winter I had Tanzania on 1377 khz which was gret.

Later, round 17:15 UTC Indian mix from All India Radio (Northern Programme) on 918 too (with stronger synchro on 747 khz), nice râgâ !!

Thank you.

Patrice

Patrice,
check 891, you should get ETH here also each night.
here it's often the strongest.
Next to Iran you may also get Lesotho (music, english)

Wow! Greenland is good on 650.

One or two NL stations also coming in but v weak. Vague carrier on 680.
Maybe signs of KBRW?

Thanks for the tip.

Good DX!

John.

Around sunset I noticed 650-Greenland as strong as Caroline.
Haven't monitored further. But currently just weak/fair cx
